Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from 1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, remaining intellectual property rights associated with the Atari 8-bit family of computers are owned by Atari Interactive, Inc., a subsidiary of Atari, SA of Lyon, France. http://corporate.atari.com/

ABOUT THIS DOCUMENT
Kept by Michael Current, michael@mcurrent.name

The latest version of this document is posted to these Usenet newsgroups every 10 days: comp.sys.atari.8bit, comp.answers, news.answers

NEWSGROUP BACKGROUND
comp.sys.atari.8bit was created in November 1986 (as part of the Great Renaming) as a direct replacement for: net.micro.atari8

comp.sys.atari.8bit is unmoderated, and has no formal newsgroup charter.

The comp.* hierarchy of Usenet newsgroups is managed by the Big-8 Management Board: http://www.big-8.org/

RELATED USENET NEWSGROUPS
  alt.binaries.comp.atari8bit
    Programs for Atari's 6502-based orphans.

  comp.sys.atari.advocacy
    Attacking and defending Atari computers.

  comp.sys.atari.announce
    Atari related hard/software announcements. (Moderated)
    Moderator: Kevin Savetz
    comp.sys.atari.announce web page: http://www.atariarchives.org/csaa/

  comp.sys.atari.programmer
    Programming on the Atari computer.

The band 8 Bit Weapon has finally added an Atari 8-bit to their line-up
(C=64, Gameboy, Apple II, etc.), and I mentioned to them that they should
try Syn as a way of doing live music.

They asked if I could send a floppy with it, and I rounded up a pair of
spare 5.25" disks from a distant in-law. So I've got room to throw in a

few more music apps. What do people recommend? I'm especially interested
in music composition / tracking software. What's what? What's good?
I never did get into composing music on the Atari, because I'm not
musically inclined. :-/

http://ftp.pigwa.net/stuff/mirror/ftp.spudster.org/pub/Atari/CTH/Audio/AMP/

amp1.zip is the 8 bit version while amp3 is for the ST.

In the zip is COMESAIL.AMP<separately in the directory too> which is
my all time favorite tune on the Atari. All the data is packed as a
zip archive so you may have to make an .atr out of it.

I've forgotten the relationship between AMP and AMS, I think AMS came
first and Philip Price complained about the naming so Steve Lashower
changed to AMP.<?>

It may not be the best but since you can convert/use AMS files AMP has
the most tunes available.

Rick

Greetings everyone!

Lets start the Holidays off right!

At this time, The DarkForce BBS is resuming its monthly prize
giveaway.

Here is December's prize:

December 2011:
1. Atariuser Magazine - some lucky Atari caller will win a free
   12 issue/1 year subscription to this great magazine (PDF).

Just telnet to "darkforce-bbs.dyndns.org"

The BBS software will automatically log your call, but please
go into the prize section and confirm that you want to be placed
into the random drawing.

Good luck to this months callers!

 :)

PS Note that the winner will have to provide a valid e-mail
   address for prize delivery.

Folks, for the moment, the DarkForce BBS is offline.

I'm now sure what's going on. I've been working on it
for the last 3 hours with no success. The board is up
and running. I can logon locally at the Mega ST itself.
I can logon to the BBS from any machine on my local

LAN. I can not logon from any outside source.
I rebooted everything, cablemodem, router, Mega ST.

I logged into dyndns.org and checked my account there
They are showing my current IP address. So the daemon
I use on my Kubuntu box is working. I called Suddenlink
and asked them if they had added any ports to those
they already block. Nope. Port 23 is still open. I logged
onto my UDS1100. All settings look normal. I logged on
to my Router, checked the port forwarding - it all looks
like its supposed to, all port 23 requests are forwarded
to the UDS1100/Mega ST's LAN address of 192.168.0.104.

I can ping that address, no problems there.

So at this point I'm scratching my head...

I'll keep working on it and will let everyone know if/when
its back up.

Sorry for any inconvenience!

Okay, I finally managed to squeeze enough time in to replace our old Dlink

router with a new Linksys.

I just used a remote access terminal and I was able to logon to DarkForce
okay.

Everyone just lemme know if you have any more problems. Keeping my
fingers crossed that this was it.

Really odd - the Dlink was working in every single aspect, except that it
was apparently failing to forward
any ip address requests.

Thanks! :)

PS Now I'm off to the mall with my wife.... the fun just never ends. :D

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from 1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, remaining intellectual property rights associated with the Atari 8-bit family of computers are owned by Atari Interactive, Inc., a subsidiary of Atari, SA of Lyon, France. http://corporate.atari.com/

ABOUT THIS DOCUMENT
Kept by Michael Current, michael@mcurrent.name

The latest version of this document is posted to these Usenet newsgroups every 10 days: comp.sys.atari.8bit, comp.answers, news.answers

NEWSGROUP BACKGROUND
comp.sys.atari.8bit was created in November 1986 (as part of the Great

Renaming) as a direct replacement for: net.micro.atari8

comp.sys.atari.8bit is unmoderated, and has no formal newsgroup charter.

The comp.* hierarchy of Usenet newsgroups is managed by the Big-8 Management Board: http://www.big-8.org/

RELATED USENET NEWSGROUPS

So it wasn't until recently (inheriting someone's big collection of 8-bit stuff) that I had an honest-to-goodness book on assembly language for the Atari. I also inherited an Atari Assembler Editor cart.

I was a bit weepy last night. For the first time, after all these years
of hacking on my Ataris, I typed in a little assembly language program,
assembled it, and ran it.

I was a bit spoiled by BASIC, then TurboBASIC XL and Action! But now that
I'm looking at whipping up my own DLIs and VBIs, I'm finding paper + POKEing
to be a bit tedious & bug-prone. :)

With so little free time, and less coming (new baby in January!), I doubt
I'll get far, but I just wanted to share my door-opening experience.

Probably old-news to all you hackers who've been assembling stuff for 30+
years. :^)

PS - Should I bother grabbing a copy of MAC/65+DDT? I see that AtariMax
has a 'reissue' version for only $25. I also know there are many, many
disk-based assemblers out there that folks use.

PPS - Oh, and I discovered a MAC/65-based cross-assembler that can run
on Linux. Maybe between that and poking around at CC65, I could build
stuff on this newfangled laptop. Too bad the keyboard absolutely sucks,
esp. compared to my 1200XL. ;)

$.02

It is a fine assembler for getting your feet wet. At some future date
you may want to change.

The other options for assembler are stylistic: It is subjective based
on how you like to work. Some people go macro crazy and others such as

myself just don't use the feature.

A macro example from Mapping

```
     .MACRO MOVEWORD
     LDA    %1
     STA    %2
     LDA    %1+1
     STA    %2+1
     .ENDM

     .MACRO MOVEBYTE
     LDA    %1
     STA    %2
     .ENDM
```

If you are really into BASIC or Action! keywords you could name the above PokeC and Poke respectively. In use you would have a file with your predefined macros and include it in your assembly program. There are problems in that you have to essentially write your own keywords, remember the exact syntax, and have the files on your work disk.

Heck, I got used to the Atari ED/ASM. It takes so freaking long to compile, I would write code for an hour or so between compiles then make myself a sandwich while it chugged away on the compile. The debugger on it isn't so hot so I would use OMNIMON instead. SOP, write a ton of code, save to disk, compile from disk, go eat a sandwich, come back, fix errors, compile from disk, bathroom break, run program, crash, use OMNIMON to figure out what I did wrong, rinse and repeat.

I was probably among the first to defect to cross assemblers. I had a Tandy 1000tx which was an 8 mHz '286 and TASM was my compiler of choice. You've probably already run into the problem with Action!: As your programs get bigger there isn't enough room to have them and your compiled code resident in memory at the same time so you compile from disk. Once you get to that stage with assembly it makes sense to go with good editor and cross compiler. That is the time when you will be forced to switch to something more sophisticated.

****As long as you are just writing a couple of lines of code to change the left margin or background colors you are fine.****

It's a tough call because you will eventually want to chose the environment that is most suited to your style. You've been on Linux for a while so you are used to multitasking and fault tolerant systems. I wonder if you can go back! :)

I like<used to> to have my code in a word processor/editor on the Intel side, Atari running either in emulation or connected via SIO2PC, then compile and test from there. Atari crashes, you still have your code safe in the Intel box. Sheesh! TASM would compile a 30k assembly files in 2 seconds. If I was doing that on an Atari with an ED/ASM

cart I would still be waiting.

Rick

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from 1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, remaining intellectual property rights associated with the Atari 8-bit family of computers are owned by Atari Interactive, Inc., a subsidiary of Atari, SA of Lyon, France. http://corporate.atari.com/

ABOUT THIS DOCUMENT

Kept by Michael Current, michael@mcurrent.name

The latest version of this document is posted to these Usenet newsgroups every 10 days: comp.sys.atari.8bit, comp.answers, news.answers

Known mirrors of the latest version of this document:

- http://faqs.cs.uu.nl/na-dir/atari-8-bit/welcome.html

NEWSGROUP BACKGROUND

comp.sys.atari.8bit was created in November 1986 (as part of the Great Renaming) as a direct replacement for: net.micro.atari8

comp.sys.atari.8bit is unmoderated, and has no formal newsgroup charter.

The comp.* hierarchy of Usenet newsgroups is managed by the Big-8 Management Board: http://www.big-8.org/

RELATED USENET NEWSGROUPS

alt.binaries.comp.atari8bit

Greetings everyone!

Here is the lucky winner for December 2011 at The DarkForce! BBS:

December 2011
1. Dark Willow wins a free 12 issue/1 year subscription to
   Atariuser Magazine.

Also, here is the January 2012 prize:

January 2012
1. Atariuser Magazine - some lucky caller will win a free 12 issue
   /1 year subscription to Atariuser Magazine.

Congratulations to our winner, and good luck to this months callers!

 :)

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from 1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, remaining intellectual property rights associated with the Atari 8-bit family of computers are owned by Atari Interactive, Inc., a subsidiary of

Atari, SA of Lyon, France. http://corporate.atari.com/

Hello:

I'm a longtime Apple II collector and have picked up a 600xl and a
800xl. I would like to hook them up to one of my LCD displays. Is
there any easy way to do that with available adapters if I have VGA on
my LCD? Is it the same for the 600xl and the 800xl?

Sorry if this is basic stuff, but the Atari setup is still new to me.

Thanks,
Matt

Has your LCD display only VGA input?

Easy may cost a bit. The 800XL has both composite and RF channel 2-3
output. If your LCD only have VGA you will may have to buy a composite
to VGA converter.
http://www.walmart.com/ip/StarTech-Composite-S-Video-to-VGA-Video-Converter=
-for-Computer-Monitors/14658986

The 600XL is just a bit tougher, IIRC it only has RF output. A cheap
way around this is to plug the RF<with proper switch box> into
something like an old VCR with composite outputs.

You still have to deal with sound. The audio output of the 800Xl can

go into just about any amplifier like a home stereo or TV that has the
inputs. Once again on an old VCR it should have RF to both video and
audio output.

In my mix of hardware I still have an old Commodore composite color
monitor, a 1702, that has a built in audio amplifier. When it came
time to get some LCD in the mix I chose a portable DVD player with
composite inputs. Price wasn't that much more then buying a composite
to VGA converter.

Rick

Sorry I replied with useful information. I just realized you are that
fruitcake who when confronted with documentation such as copyrights
said the information was falsified. When proved to be wrong resorted
to insults. You need professional help, there is something seriously
wrong with you.

Sincerely
Rick

I'm not the seller/don't know who it is/not my bag. I just thought it
was interesting to see the inside of the prototypes. I always thought
the 5200 cartridges were over sized/bloated but seeing the prototypes
filled with 2732 ROMs gives me a bit of insight. In retrospect Atari
had probably cornered the market on 4k ROMs and wanted completed games
to go with the introduction of the 5200 circa 1982.

Rick

While restoring my Heathkit H8 computer I designed a SASI to IDE
Storage controller. It uses the SASI bus and the block size is 256
bytes. It uses dual CF cards to allow booting from Drive0 or Drive1.
See the following webpage for details;

http://www.koyado.com/Heathkit/Z67-IDE.html

I was wondering if the Atari uses the SASI bus, and if it does, I will
like to add Atari support to the Z67-IDE if there is interest on it.

Thanks,

Norby

Back in the 80's, I was running a 10meg SASI hard drive for a BBS along
with a 4 meg MIO and 130xe with 2 megs of memory. So long story short,
my answer would probably be YES but if Bob Puff or someone from ICD /
Fine Tooned is still lurking around, they would know the tech better
than myself

Hi Folks,

sorry but i think it was NOT SASI but i think it was SCSI... if i remember
it right i had a BBS exprexx pro with BlackBox en ik think 20 GIG harddisk
later 140 GIG scsi harddisk..

sorry for my 2 cents ;-)

Greetinx from Bernard aka Sysop Bernard ;-)

Your H8 trumps my H89!

Not natively. I believe the first models, vanilla Atari 800, had one or two SASI adapters but they are rare. When the 800XL came out there were ~3 differenent manufacturers of SCSI interfaces.

I read your web page and share your pain. I tried to resurect a bunch of MFM drives w/o sucess this year. Only one that showed life was a 10 meg true IBM full height drive. I had to format it with an ISA MFM card. I have a Xebec controller for it that tested good 15 years ago but haven't hooked the combination up to test. I picked up a old SCSI drive to start sorting through my SCSI controllers to see which ones are good before I plug anything into the Xebec.

Back to Atari, most of the current generation of interfaces are IDE to real or CF drives or serial with SD cards for storage. Anything you do would be well recieved and read for educational purposes but I don't think many people will need to actually have the hardware. One of the manufacturers of a SCSI interface was taking preorders and AFAIK hasn't gotten enough orders in the last year or two to make a production run.

All models of Atari computers came with a built in ttl serial interface to storage. There have been ~7 different people/groups that have used the serial interface with converters to RS232 that use DOS, CP/M, Atari ST, Linux, Windows, and Mac, on their respective hardware platforms. The price for the interface is about $2-6 in parts so a lot of people just went that way. Something like ~3,000 known sales from a single source.

Rick

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from 1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, remaining intellectual property rights associated with the Atari 8-bit family of computers are owned by Atari Interactive, Inc., a subsidiary of Atari, SA of Lyon, France. http://corporate.atari.com/

ABOUT THIS DOCUMENT

Kept by Michael Current, michael@mcurrent.name

The latest version of this document is posted to these Usenet newsgroups every 10 days: comp.sys.atari.8bit, comp.answers, news.answers

Known mirrors of the latest version of this document:
- ftp://rtfm.mit.edu/pub/faqs/atari-8-bit/welcome
- http://faqs.cs.uu.nl/na-dir/atari-8-bit/welcome.html

NEWSGROUP BACKGROUND

comp.sys.atari.8bit was created in November 1986 (as part of the Great Renaming) as a direct replacement for: net.micro.atari8

comp.sys.atari.8bit is unmoderated, and has no formal newsgroup charter.

The comp.* hierarchy of Usenet newsgroups is managed by the Big-8 Management Board: http://www.big-8.org/

RELATED USENET NEWSGROUPS

alt.binaries.comp.atari8bit
Programs for Atari's 6502-based orphans.

comp.sys.atari.advocacy
Attacking and defending Atari computers.

comp.sys.atari.announce
Atari related hard/software announcements. (Moderated)
Moderator: Kevin Savetz
comp.sys.atari.announce web page: http://www.atariarchives.org/csaa/

comp.sys.atari.programmer
Programming on the Atari computer.

Come one, come all, to the Seattle Retro-Computing Society's monthly
meeting, on Saturday, September 17th, 2011!

Do you do any of the following with old computers near Seattle?

   + Use, collect, and/or restore them
   + Play games on them
   + Write programs for them
   + Develop new hardware for them
   + Help other people do any of the above

If your answer was "yes," as I expect it will be if you're reading
this
near Seattle, then the SRCS is for you! We exist so you can show off
your awesome stuff, bounce ideas off of fellow enthusiasts, and be
inspired by one another's achievements, plans and aspirations.

No idea is too big or too small, and we're not picky about what flavor
of vintage machine you prefer! Come on down and tell us about it!

The meetings are graciously hosted by the Living Computer Museum, a
relatively new organization which is building a computer museum in
Seattle's SODO neighborhood. There will be refreshments, a Buy-Sell-
Free-Trade table, and enough table space & power to set up anything
you
may want to show off!

For further details, please see our newly improved web page at
http://www.seattleretrocomputing.com/ and our mailing list at
http://groups.google.com/group/seattle-retrocomp . Hope to see you
there!

(Please note, we usually meet on the fourth Saturday of each month; we
had to move it up a week this month because of schedule conflicts with
retrocomputing events in other cities.)

Gordon "gsteemso" Steemson
SRCS agitator-in-chief

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from

1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, remaining intellectual property rights associated with the Atari 8-bit family of computers are owned by Atari Interactive, Inc., a subsidiary of Atari, SA of Lyon, France. http://corporate.atari.com/

ABOUT THIS DOCUMENT
Kept by Michael Current, michael@mcurrent.name

The latest version of this document is posted to these Usenet newsgroups every 10 days: comp.sys.atari.8bit, comp.answers, news.answers

Just thought I would take a break from getting back up to my Atari
hobby to make a couple of corrections if I haven't done them already.

A bit of background: I have a couple of Cybiko hand held PDAs. They
were pretty capable systems in their time H8 ~16/32 bit main processor
depending on how you define your processor running at 11 mHz. There is
a Cybiko Xtreme that runs faster but it doesn't have a built in serial
port so it is less interesting for the task at hand. I *THINK* they
sold something like 3 million of them and they appear on fleabay for
$5-$20 every once in a while.

Pavel Machek wrote a linux sio2pc type program and says he used a
75LS149 for his device. I think this is a typo or misspeak. There are
MC1489, MC1489A, SN55189, SN55189A, SN75189, SN75189A but to the best

of my knowledge there is no such animal. I think TI did come out with something like a 75LS155 back in the CP/M days but I just can't remember there every being a 75LS149.

Other thing is the 74LS138 in most of the schematics available online is wrong, other then that they are pretty good.

When I took a C programming class it was back in the 80s. Honestly looking at the make files in all their derivations I think they are more sophisticated and more complex then anything C used to be. Sheesh! I am trying to get back up to speed with the Cybiko SDK and think I need to take a class in 'make file programming.' I had the same gripe when working with cc65!

On the bright side I have femul.c compiling for the Cybiko mostly right except for what should be simple stuff like include paths. The Cybiko's default serial speed is 57k so making one work as an Atari sio2pc drive should be trivial. It doesn't mean much for a non expanded device, only ~512 flash and 512k ram, but i have a couple of accessories like 1 meg expansion and mp3 player with a 16 meg SD card. Kind of laughable these days but I think the max SD card you can have is 64 megs. I think the smallest I have in my parts drawer is either 128 or 512 megs so I will probably crash it if I try to use it.<grin>

Been doing some ugly hacking: Tore apart a dead cell phone so I now have a Cybiko running on Li ion batteries. It's only important in that replacement batteries go for about $6 each plus shipping and you need two of them. Seems to be working OK but I really should do some kind of hack to get the voltage levels for charging right.

It's a hobby so I don't have to do something useful. I figure if I get a stock Cybiko that holds a single 88k Atari disk image in the next year I will call it a win. Anything beyond that will be gravy. Back when i was writing a lot of software my development system was typically just a 720k disk. I should just burn myself a sio2sd device but I am obsessing on the Cybiko for some reason. I will ask on the Cybiko forums is anyone is still around.

Just thought I would take a break from getting back up to my Atari hobby to make a couple of corrections if I haven't done them already.

A bit of background: I have a couple of Cybiko hand held PDAs. They were pretty capable systems in their time H8 ~16/32 bit main processor depending on how you define your processor running at 11 mHz. There is a Cybiko Xtreme that runs faster but it doesn't have a built in serial port so it is less interesting for the task at hand. I *THINK* they sold something like 3 million of them and they appear on fleabay for $5-$20 every once in a while.

Pavel Machek wrote a linux sio2pc type program and says he used a 75LS149 for his device. I think this is a typo or misspeak. There are MC1489, MC1489A, SN55189, SN55189A, SN75189, SN75189A but to the best of my knowledge there is no such animal. I think TI did come out with something like a 75LS155 back in the CP/M days but I just can't remember there every being a 75LS149.

Other thing is the 74LS138 in most of the schematics available online is wrong, other then that they are pretty good.

When I took a C programming class it was back in the 80s. Honestly looking at the make files in all their derivations I think they are more sophisticated and more complex then anything C used to be. Sheesh! I am trying to get back up to speed with the Cybiko SDK and think I need to take a class in 'make file programming.' I had the same gripe when working with cc65!

On the bright side I have femul.c compiling for the Cybiko mostly right except for what should be simple stuff like include paths. The Cybiko's default serial speed is 57k so making one work as an Atari sio2pc drive should be trivial. It doesn't mean much for a non expanded device, only ~512 flash and 512k ram, but i have a couple of

accessories like 1 meg expansion and mp3 player with a 16 meg SD card.
Kind of laughable these days but I think the max SD card you can have
is 64 megs. I think the smallest I have in my parts drawer is either
128 or 512 megs so I will probably crash it if I try to use it.<grin>

Been doing some ugly hacking: Tore apart a dead cell phone so I now
have a Cybiko running on Li ion batteries. It's only important in that
replacement batteries go for about $6 each plus shipping and you need
two of them. Seems to be working OK but I really should do some kind
of hack to get the voltage levels for charging right.

It's a hobby so I don't have to do something useful. I figure if I get
a stock Cybiko that holds a single 88k Atari disk image in the next
year I will call it a win. Anything beyond that will be gravy. Back
when i was writing a lot of software my development system was
typically just a 720k disk. I should just burn myself a sio2sd device
but I am obsessing on the Cybiko for some reason. I will ask on the
Cybiko forums is anyone is still around.

I'm a VERY naiive "Make" user, but about 12+ years ago I got a copy
of "Managing Projects with Make" by O'Reilly. Was pretty useful.
My naiive use is basically:

--- begin ---

```
# Var. for where to install my app
PREFIX=/usr/local

# ... and its data
DATA_PREFIX=($PREFIX)/share/my_app

# Flags to send C compiler.  Including a hard-coded (#define) value
# that'll tell the app where to find its data.  -Wall turns on 'all' warnings.

CFLAGS=-Wall -DPREFIX="$(DATA_PREFIX)"

# Default make target: build the app
all: my_executable

# Target for installing app and its data
install:
     cp my_executable $(PREFIX)/bin/
     cp -r data/ $(DATA_PREFIX)/

# Link the objects into the final executable
my_executable:     my_app.o some_other_funcs.o
     $(CC) ($LDFLAGS) my_app.o some_other_funcs.o -o my_executable

# Create my main object
my_app.o: my_app.c some_other_funcs.h
     # Make's default rule is sufficient; it'll come out as:
     # $(CC) my_app.c $(CFLAGS) -o my_app.o

# Create object for some other functions
some_other_funcs.o:    some_other_funcs.c some_other_funcs.h
     # Ditto
```

--- end ---

Or, yknow, something like that. :) There's some insanely clever stuff
you can get Make systems to do, but 99% of the time I just want it to handle
dependencies and take care of some variables.

For example, in the above case, on Linux a:

```
  $ sudo make install
```

would install it into /usr/local/. But I could easily install it in the
non-local place:

```
  $ make PREFIX=/usr
  $ sudo make install PREFIX=/usr
```

or, like back when I was on a shared Unix (Solaris and SunOS) box in
college, I could tell it I want things to run from somewhere in my homedir.
(Notice I don't need to have root privileges -- no "sudo")

```
  $ make PREFIX=/home/kendrick/opt
  $ make install PREFIX=/home/kendrick/opt
```

I'm rambling. :)

Thanks for the tip, I am downloading Managing Projects with GNU Make,
3.Xth Edition to see if I can be enlightened.

"An implicit rule is either a pattern rule or a suffix rule.
There are built-in pattern rules for C, C++, Pascal, FORTRAN, ratfor,
Modula, Texinfo, TEX (including Tangle
and Weave), Emacs Lisp, RCS, and SCCS. In addition, there are rules
for supporting programs for these
languages, such as cpp, as, yacc, lex, tangle, weave and dvi tools. If
you are using any of these tools,
you'll probably find most of what you need in the built-in rules. If
you're using some unsupported languages
such as Java or XML, you will have to write rules of your own."

This could take a while.

It's where I live. :) I feel like Rip Van Winkle. When I was last
awake I could go to Fry's to pick up some EPROMs and a bag of Doritos.
Went there yesterday and they had squat EPROMs but you could still get
a bag of chips<sic>. They had a stack of 6821's but the price was
double everyone online. I was thinking of trying to keep my SDX 4.19
ROM as is just in case something goes wrong when I burn 4.22 but the
nearest place to get a 27C512 is a 20 mile drive. I have an old 386sx
working motherboard I am trying to tell myself I should pull parts off
of. It was a back up position but my new EPROM burner seems to be
working OK.

BTW: I did get Puppy Linux burned into a CD and it worked well.
Unfortunately all the laptops I fixed went back and I left the CD in
one of them. Hard times: Woman I fixed them for took them all
including the one I was supposed to get to keep to sell for cigarette
money! Ah, life is but a joke.

I can't find a 74LS149 in my data books either. I made several
different designs, 74LS00, 4049, et cetera. Just about any inverting

logic or amp will work.

I guess it isn't a big deal: Everyone left probably already has one of
[sio2pc, sio2usb, sio2sd, sio2ide, emulator, ...]

Actually, no. I don't. OTOH, my 130XE hasn't been used for quite a few
years. Lack of space, TBH. However, I hope for that to change soon(-ish).

I'm begining to wonder if I was every as good as I think I was. I finally pulled the tags off my SDX ROM and it turns out it was a OTP type w/o a window! I have version the 4.21 binary and didn't have version 4.22. If I understand it only had code changes to detect a 65C816 processor and switch to FTE as the copyright holder. Correcting my post about corrections!

I'm real slow coming back up to speed. For the last year or so my Atari has been a gypsy system that I set up in front of the TV or 1702 monitor. Its been hooked up via sio2pc to half a dozen different clones and laptops. I had it hooked up to my ATR8000 for a while but SDX never played nicely with it: IIRC the time out is set way too short in SD so you hear the babbling sio sounds a couple of times before the built in head load delays in an ATR8000 start to read. I may have to look into that...

Anyway, after 20 years of significant others who treated my Ataris like an infectious disease I finally have a bit of tolerance with space for a table and an LCD monitor somewhere other then a flooded basement. Really feels good!

Found out the hard way there is no such thing as a 28 pin 512k flash but that 386sx motherboard died for a good cause. Built a monitor cable, still have 2-4 flavors of sio2pc cable laying around. Fatih Ayg=FCn has a new sio2pc type Windows software AspeQt with high speed routines. I still do have a small footprint PC running Windows XP embedded with a fresh 10 gig CF I put in it last week to compliment its 512 meg boot CF. That Puppy Linux Bill pointed me to can install to a USB thumb drive so I even have a back up position. My old Dataerase is taking an hour to erase an EPROM but there are a bunch of <$30 ones on fleabay. Life is looking good.

Rick

Wow, this kinda surprised me:

  Alternate Reality, M.U.L.E., Paradroid Coming to iOS
  Sep. 23, 2011
  http://www.macworld.co.uk/ipod-itunes/news/index.cfm?newsid=3305580

    British developer-publisher Elite is resurrecting a variety of classic
    games for iOS

    Following a successful range of ZX Spectrum rereleases on iOS, long
    established UK developer-publisher Elite Systems is turning its
    attention to a variety of computer games from other 8 bit computers
    such as the Commodore 64 and Atari range.

    Nine standalone iOS conversions are set to hit the App Store for
    59p each on an as yet undecided date -- three of these will be of US
    origin, three from the UK and three from Germany.

    The American games include Datasoft's action adventure Black Magic
    from 1987; Ozark Softscape's fantastic multiplayer strategy game
    M.U.L.E. from 1983; and the immensely ambitious open world freeform
    RPG Alternate Reality: The City from 1987.

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from 1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, remaining intellectual property rights associated with the Atari 8-bit family of computers are owned by Atari Interactive, Inc., a subsidiary of Atari, SA of Lyon, France. http://corporate.atari.com/

I wonder if they actually got the 'rights' to do this. I hope for
clear sailing anyway with a few improvements. At this stage in CRPG
development things have been dumbed down so much I suspect The City
will become a much friendlier place. I played it on 3 platforms, [ST,
IBM, 8bit] and found the first two much easier to play. They
implemented features that were left out of the original 8bit version
like being able to get a job which made starting a character much
easier. Just being easier wasn't enough to make me like them as much
as the 8bit version. Heck, I have a Windows Mobile phone anyway and if
I did switch my first choice would probably be some flavor of Andriod.

Rick

You know what I would find hilarious - new Infocom style works of
Interactive Fiction. Completely impossible on anything iPhone/Android-
phone sized, unless you like pain. :D But that said, after pulling out
of doing an Atari Exhibit at this year's Vintage Computer Fest Midwest
for having a car accident 2 days before the show, I showed up and ran
games (well, sort of) with the Atari800 emulator on my AT&T Inspire...

Greetings,

I've been using Atari 8-bit Machines for a few years, and am always looking
for items to add to my collection.

*****
Current want List....
Atari 8-Bit Items...
SpartaDos X cartridge (I have the original Manuals and etc.)
Atari 410 or 1010, program recorder. Pefer a 410 if I can find one.
Happy Controller board for a 1050, (Not the Happy Board).
However if you have both installed in a working 1050 for sale,
then I maybe interested if price is right.

ICD Multi I/O 256meg or 1meg unit.
Sparta DOS US Doubler for 1050 upgrade, or
1050 with the US Doubler already Installed.

Also, looking for Midi Mate, and any voice/audio digitisers and

Video/Scanners for Atari 8-bit.

Contact me at:
phantomm@suddenlink.net if you have any of the above items for sale or trade.
Or If you have any Atari 8-bit items, that are rare, or not well known about.

thanks,
Barry

The standard OS can't boot at high speed and you can't preload a handler safely without the high possibility of the disk you're booting overwriting it.
Best option is a custom OS like the Warp+ one in the AtariMax 32in1 upgrade.
Another possibility would be to have a patcher that added high-speed to the existing OS and runs the OS from RAM and forces a disk boot but then there'd be issues of compatibility and the possibility of your patched OS getting wiped. Plus it adds extra time to the overall process to the point you'd probably not save much if any load time.

I did it. I lost my first listing, got a new computer and guess I
didn't save MICKEY.BAS.
Took me a while to realize I had to put a EOL at the end of line 275
for it to translate to ATASCII for me.
It is interesting what you did with artifacting, but I like the
original colors better.
I mostly go to atariage for discussions now.

Last year I inherited some old Atari 8-bit stuff, and among it was a couple
of binders of photocopied or printed documentation. I'm going to dump it
in the recycling bin, unless anyone out here has any use for it, and gets
back to me soon (I'm moving across town in a few weeks!)

* valForth Player-Missile Graphics
* valForth 1.1
* valForth Tutle & valGraphics and Advanced Floating Point Routines
* valForth Display Formatter
* valForth Advanced 6502 Macro Assembler
* valForth Text Compression and Auto Text Formatting
* Data Perfect (manual)
* Family Finances (manual)

I'm in Davis, CA, if you want to swing by and pick it up (and chat over
some coffee), or we can talk about shipping.

Thanks!

From the same collection I mentioned (with the valForth, etc. docs),
I've got a pile of cassette tapes and 5.25" disks for the Atari;
a variety of stuff I haven't looked over closely, and probably never will.

Some of it's data files, and from the fellow's own collection of stuff,
but a bunch of it is ANTIC software (actual ANTIC disks, or typed in
from magazines, from what the labels show). Some of it is obviously cracked
stuff (e.g., some disks with a collection of games that I recognize as
commercial titles that'd never be on a XIDEX floppy with a hand-written
label ;))

Would this be useful to anyone, or should I ditch it or find somewhere
to donate it (who'd want it, outside us folks!?)?

Thanks!

Back before I got an SIO2SD, the last device I used to boot my Atari
was a Linux PC with an serial SIO2PC cable that I bought from
Steve @ AtariMax.

It worked last I used it, but I don't have any PCs with serial ports
to test it with. It has an SIO jack on it (I guess sometimes they don't?),
and on the bottom it says: "AC-02 5203". On top it says "(c) 2003 SJ Tucker
SIO2PC Universal."

I've got a serial cable I'll throw in. I MAY have a spare SIO cable if
you need it.

Come get it in Davis (near Sacramento), California, or you pay shipping.

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from

1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, the Atari computer intellectual property rights, along with the
home market rights to the Atari trademark itself, are owned by
Atari Interactive, Inc., a subsidiary of Atari, SA of Lyon, France.

Yeah, I drop by Atari Age every once but not enough time to
participate.

My posts are more like senile ramblings lately. Just to make them into
one cognitive thought. One of my favorite games of all time was Pools
of Radiance which never made it to the Atari. I still play a lot of
Rogue. We never got a good Rogue either. I loved Dungeon Master too.

Had Atari made a 256 character mode it would have made the graphics
for porting those types of games *SO* much easier. Specifically they
should have used the high bit to switch character sets instead of
providing inverse. This would have made it trivial to mix graphics and
40 column text on the same line. There's something like 85 printable
ASCII characters so you are limited to 43 redefined characters and
artifacting if you want color. I liked the Ultimas which used
artifacting but for several reasons don't like doing it myself. Being
able to switch between a graphic 0 and graphic 12, each with their own
character set without resorting to DLI's or kernals would be trick.

I finally got my 'Atari Area' back after 20 years. Looking back at the
stuff I have done, hardware hacks, terminal programs, utilities, et
cetera, the one gaping hole is a lousy game. I say lousy because I
don't really have what it takes to polish a game to the point it would
be considered good. I think I will set up a system and start pounding
out some code just to see if I can make it graphically interesting
enough to get inspired.

Rick

Thought I posted a response earlier but it didn't show up. I drop by
AA every once in a while but no time to participate. I get too
distracted with hankie fights and trivia anyway!<grin>

I really wish Atari would have done GTIA/ANTIC just a bit different.
I'm not sure if it would have been feasible but if they had used the
7th bit to enable a 256 character mode instead of going inverse a lot
of the games I like would have been possible. Rogue for instance could
have been almost a direct translation from the IBM version. The
ability to mix text and graphics on the same line would be nice too.
As it stands we either have to dip into the ~85 printable characters
or make do with 43 redefined characters max.

I kind of dislike the artifacting mode myself. The Ultimas were good
games and the graphics were OK but they could have been better. I like
the layouts of other games like Pools of Radiance where they mixed
graphics and text on the same line. Not that it couldn't be done on an
Atari, just that it would be difficult. Ability to switch between
graphics 12 and graphics 0 on a line would be trick. Layouts like

********** Semoor Butts 37 hps
* GRAPHICS **** I. P. Freely   27 hps

********** Mild Hy   44 hps
****

w/o having to resort to artifacting and bit mapped modes would have
been nice. I think I will give it a hard look.

Thanks Russ. This is my 3rd reply but the first two haven't shown up.

If this doesn't work I think I will have to login to my earthlink
account to see if I kill filed myself.<grin>

Rick

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from 1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, the Atari computer intellectual property rights, along with the home market rights to the Atari trademark itself, are owned by Atari Interactive, Inc., a subsidiary of Atari, SA of Lyon, France.

Forgot I still had this: Atari 850 RS232 (serial port) device, with power
adapter & SIO cable. Nicely packed in the box I got it in, when I inherited
it from someone or other.

Free... just pay shipping. (I prefer FedEx Ground, but could also do
USPS with little trouble, since it's already boxed.)

Email me directly if you want it!

Just stumbled upon a video of "Control", a demo by LaResistance released
back in December (2010), which is a "conversion" of a mid-1990s Amiga demo.

I'm moving in a week, and my 8-bits are hiding in a box somewhere, but since
it's a demo, a video on YouTube is sufficient :) Go watch! It's incredible!

(Tons of 3D polygon effects, most a bit more complicated than I think I've
seen on the 8-bits so far.)

http://www.youtube.com/watch?v=6OsK4eC6rpg

And compare to the original:

http://www.youtube.com/watch?v=2olrJ7gy3PE

Bill Kendrick <bill@newbreedsoftware.com> wrote:
> Free... just pay shipping. (I prefer FedEx Ground, but could also do
> USPS with little trouble, since it's already boxed.)

BTW, I looked closer at the box and it's an original Atari one!
Even has a "Dealer Registration Card" stuck to it that's never been taken
off the box.

Sticker on the top left:

  A.P.C.D.
  390 Caribbean Drive, Sunnyvale, CA 94086

  Model No. 850   (stamped)
  Contents   DON
  Qty.

Sticker on right side:

  Serial No.
  83AHN   201904   (stamped)

Stamped on right:

  ATARI, INC.
  Sunnyvale, CA 94086

Stamped on bottom (may be box-related, not contents-related, since it's
next to a box certificate stamp):

  C-5 183
  C016552
  UB93787

So if you're a box collector, for whatever reason, this'll be up your
alley. ;)

Subject: Introduction

Conventions

All commercial vendors, developers, publishers, and repair shops should be listed here. "Active" PD/freeware/shareware developers should also be listed. Persons or entities holding rights to products, but not selling or supporting them in any way, should NOT be listed here.

"Vendor" = Reseller of products produced by others. Types of products sold are given in categories: new hardware, used hardware, PD/freeware/ shareware, (new) commercial software, used (commercial) software.

"Developer" = Producer of products. Titles of products produced by the developer are listed. No prices are given.

"Publisher" = Publishes a print or disk magazine, or a book. Complete subscription or ordering information should be given, including prices. Authorized online publishers of originally print or disk magazines are also listed. Online books are not listed.

"Repair Shop" = Can repair 8-bit Atari or related hardware devices. Be sure to make advance contact before sending anything to work on!

Entries are presented alphabetically by company name, or publication

title. If no company name exists, a personal name is used. "See" references indicate complete information may be found under the given heading. "See also" references indicate closely-related information may be found under the given heading.

The month/year that vendor information was most recently fully verified is given at the "upper-right" of each entry.

Every entry should contain a valid postal address or web page address.

Entries do not include an email address due to the overwhelming amount of spam that would result.

Internation Reply Coupons

The following is from: (2010.09.12)
http://www.upu.int/en/activities/international-reply-coupons/about-irc.html

About International Reply Coupons
When one writes to a stranger and requests a reply, it is considered polite to enclose a self-addressed stamped envelope. This works well when both persons live in the same country; however, if they are from different countries, the enclosed postage stamp will not be valid.

All member countries
This technical problem was solved in 1906 when the Universal Postal Union, during its Congress in Rome, introduced the International Reply Coupon service. As the service began before the days of airmail, the earliest coupons could only be redeemed for a single-rate ordinary postage stamp to a foreign country. In terms of today's UPU Convention, International reply coupons (IRC) are exchangeable in all member countries for the minimum postage of a priority item or an unregistered airmail letter sent to a foreign country.

Mandatory to exchange
The UPU's International Bureau processes several million coupons each year and deals with of all accounting aspects. The International Bureau does not sell IRCs directly to customers; they must buy them from their local post office. Although Posts are not obliged to sell IRCs, it is mandatory for Posts to exchange the coupons. If a Post does not sell IRCs, it is possible to purchase them in a post office located in a neighbouring country.

DISCLAIMER

Appearance in this list does not constitute a recommendation or endorsement of the business, individual, product, or service listed.

Verfications -> YOU!

This list is in a constant state of development, and comes with no guarantees. Information of this nature constantly ages; therefore, the information contained in this list is constantly updated. Please use the latest release of this list whenever possible!

Remember, the success of this list is dependent on YOU, the reader, to
send me updates that correct errors that you find. If you use this
list, please do your part in keeping it useful for everyone!

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from 1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, remaining intellectual property rights associated with the Atari 8-bit family of computers are owned by Atari Interactive, Inc., a subsidiary of Atari, SA of Lyon, France. http://corporate.atari.com/

ABOUT THIS DOCUMENT

That is just uncalled for. Ben is an honest guy. I've done several
expedient and honest transactions for quality vintage atari gear with
Bravo Sierra.

If you don't like the ads, then for fuck sake, just block him, don't
slander the guy. I'd rather see his ads than sporge for DIOR PRADA
GUCCI BLA BLA BLA. At least it's on-topic and not vulgar like those
ads. I bought machinery because of those ads, and others have as
well.

Wondering aloud: Since this group focuses on vintage atari equipment
that would place most participants here at least 30 and more likely
age 40 and up, why would someone of that age behave as displayed in
this post at that stage in life ?

Anyway. I have several machines and carts still running strong that I
bought from Bravo Sierra. he's a good guy. This slander is just wrong.

You're wasting your time. Dave U Random, as he usually posts, is a nutjob. I've seen his stuff in plenty of ng's, but not here before now. Expect things to get worse.

The stuff's difficult to filter too. Nym-shifting and posting via anonymisers make it harder to get rid of. :-(

Rule #1 of flaming effectively: flame effectively. This just reads like
it was written by a four-year-old who learned his first naughty words
and is getting as much mileage out of them as he can before the bar of
soap gets shoved into his mouth.

C+ for effort, but a definite F for content.

- J.

I follow web hits to the newsgroup. Normally we get about 10-20/hour.
After the last go round of name calling the hits are 17000/33 hours or
550/hour.

Lesson is: If you want a lot a hits to your web sight make sure you
include those posts in your welcome message.

Rick

Would be a great master plan since since they could hit google groups
and google has some deep pockets! j/k

Complete outsider to the workings of current Atari but IMHO the

current activity may be directed at keeping their trademarks and copyrighted logos. I am only familiar with patents and to a much lessor degree copyrights. My pedestrian knowledge of trademarks is defend it or lose it. The law may have changed but it makes sense Atari wouldn't want to go the way of [coke, xerox, aspirin, ... Heck, I wouldn't want to see Nvidia start putting Atari logos on their video cards, I'm not sure why though.

There's easy ways around it: Atari could just require you get permission from them before you use the rainbow Fuji on your web site or product. Maybe make you add a blurb like <Fuji> used with permission of Atari Corps. You really don't want people using the Atari Logo on a shit on a shingle product or even something questionable like 'abandon ware' carts. They are going to have some trouble having images removed from the Wayback Machine archive.<grin>

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from 1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, remaining intellectual property rights associated with the Atari 8-bit family of computers are owned by Atari Interactive, Inc., a subsidiary of Atari, SA of Lyon, France. http://corporate.atari.com/

ABOUT THIS DOCUMENT
Kept by Michael Current, michael@mcurrent.name

The latest version of this document is posted to these Usenet newsgroups every 10 days: comp.sys.atari.8bit, comp.answers, news.answers

Please go eat a big bag of shit.

I've been using your computers and related products since 1981. If you really want to pursue a war with the few remaining people who know what this company once stood for and meant to both them and personal computing in general, be my guest - but all you'll really be doing is alienating those same people who still comprehend that significance. Do you really think some 14-year-old kid scrounging money from his parents to buy what's actually a rebranded Infogrames title puts any stock in the Fuji logo, or the groundbreaking computers and video games that it represents? Of course not.

Get real. We may not own the rights to the company or its intellectual property, but we certainly have more right to use it than you fuckers seem to think we do.

Posted under Fair Use doctrine, so suck it, bitches.

- J.

/* Rambling snipped */

What actually troubles me more is that it becomes more and more
fashionable to try to earn money with lawyers by suing "competitors"
instead of creating useful content or applications.

Dear companies, this type of "business model" is not self-sustaining,
and you will block anyone from inventing or investing anything anymore.

Lawyers don't create values. Engineers do.

Atari is only one of the smaller examples of this questionable movement
in industry nowadays - if you can't do it yourself, block others from
doing. Nice...

Yup, just need 250 votes to have a valid and conclusive result.

> this situation before and know how to resolve it?

Some games, including Ultima and Pinball Construction set, utilize
the Atari 8-bit's high-resolution (320x192) 2-color graphics mode,
and took advantage of the 'color artifacts' that you'd see when
using RF or composite.

By default, since it's faster to render, emulators show you exactly
which pixels are lit up, ignoring the artifacting. It's what you'd
see on a real Atari using separate Chrom/Luma outputs on a nicer
monitor (like a Commodore 1802).

I don't have Windows, so am going off of Atari800 (upon which
Atari800Win is based), but it should go something like this:

  [F1] to bring up the menu
  Arrow down to "Display Settings", hit [Enter]
  Hit [Enter] on "NTSC artficating quality" and choose an option
    (other than "off") -- I just discovered the recently-added
    "NTSC filter", which presents a larger screen with a little
    bit of black interleaved between each scanline, and some other
    non-perfect artifacts. It looks very good! A lot like my old
    Trinitron TV :)
  If you select "original" or "new" (not "off" or "NTSC filter"),
    the "NTSC artifacting mode" option becomes available, and
    you canplay with options in there

Enjoy!

Hello!

I got an Atari 130XE, but it has no ROMs (System and Basic) in its
sockets..

Does someone know, which types of (E)PROMs these ROMs are? Is it
possible to get an Image of these two ROM ICs?

I hope, someone can help me.

Best Regards, Xaar.

Not sure but try 'View', 'Artifacting' in menu system.

Rick

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by

Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of
Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from
1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, the Atari computer intellectual property rights, along with the
home market rights to the Atari trademark itself, are owned by
Atari Interactive, Inc., a subsidiary of Atari, SA of Lyon, France.

They must have thought they were more valuable than the computer as a
whole, or perhaps they used them for parts for one in better condition.

I've looked for EPROMS in modems and soundcards at thrift stores before,
perhaps someone did something similar?

 Wrong point of view.

 The BBC was released as a do-it-yourself project picked up by a
commercial market.

 There were similiar projects in germany around the same time, all named
after the television stations running these diy projects: the
NDR-kleincomputer, the WDR-Computer and others... some of them numbering
several thousand systems and becoming the second most sold computer at
that time.

 If you started in 1980 building your own computer as instructed on
television you got a Z80 system with 4kByte memory and tape support. The
OS was a rather simplistic hex monitor.

 By continuing until 1988 you ended up with a 68020/68881 workstation
with 8MB memory, SCSI support and some expansion card system running
several operating systems like CP/M 68k, TOS/GEM (yes, there was an
illegal port), Coherent and others. I think there even was some open
source reimplementiation of CP/M 68k based on ideas from the television
show becoming very influential to early open source ideas.

 Funnily/Sadly while the NDR/WDR-computers were quite capable and widely
used they never created a commercial followup market.

Nonetheless it didn't enjoy the same success as the C64. And--even if strangely--almost no software was ever made for the C128, yet software for the C64 was STILL being made and sold (even if for no other reason than that you could run it on the much newer C128 hehehe). (I believe that software developers should have made a go of it, but that never happened.)

And since I never owned and barely ever used the C128, I don't really

know so much about it that I should vote for it hehehehe

Well, I really do not know.. I now got some ROM files, and put it on
some EPROMs (27128 for System, 2764 for Basic).
Unfortunately does the Computer not start.. :(I guess there are some
more broken circuit lanes on the PCB, I already fixed 24 broken lanes
by rebuilding their function via wire...

But I will get an fully functional 130XE during the next weeks, so I
can take a look.

Best regards, Xaar.

The OS ROM is a standard pin out 27128 type. It is likely the BASIC ROM is an Atari mask type ROM, 24 pins vs. 28 like you would see on a 2764.

These are just a guesses: PO probably had a modified OS and maybe expanded RAM. The modified OS could have been anything from something compatible with older software to one with built in high speed disk routines. Ram expansions sometimes use the 6520 PIA CS pin to the BASIC ROM for banking RAM. Heck, I used to replace the ROM with ASM/ED ROM so who knows?

B&C Computer Visions at www.Myatari.com has the BASIC chip for $12. Some people would prefer to leave the built in BASIC out of the computer and just use a BASIC cartridge. That way if you did decide to expand the memory you have the PIA pin available.

Just for the record, I think everyone has switched to flash ROMs. I seem to be the last man standing using UV erasable EPROMs. You probably should go that route with respect to a replacement OS. There are images of OS as well as BASIC for that matter if you want to burn your own.

Rick

I've still got them, and plan to continue using them (no point buying
new equipment when the old stuff still works). Of course, it's been a
few years since I've actually done it. :)

No it wasn't. It was commissioned by the state broadcaster from Acorn in
a sort of fit of corporatist paternalism. And nobody* bought one.

That's absolutely nothing like the BBC Microcomputer project. Had the
BBC programme been something like that, I - and I suspect Ian - would
have been slightly better disposed towards it. But it simply wasn't.

The BBC decided in the early '80s that it had to produce a series of
shows on TV and radio about computers, and therefore (for some reason)
needed its own machine. Not its own *design* that it would show people
how to build; its own machine, in the shops, with a BBC logo on the box
and the newsreader Kenneth Kendall's voice in the optional speech
device. It invited tenders for the contract requiring certain features
(Sinclair submitted one and - according to the Beeb - failed to meet the
spec.; it became the Spectrum) and Acorn won. The machine was then sold
as the BBC Microcomputer.

And nobody except schools and rich parents bought one, because it was
significantly more expensive than the competition. Even Acorn recognised
this, and released a cut-down version under its own brand, the Electron.
The BBC, though, defiantly - and hilariously, to we Speccy and C64 kids
- continued to refer to it as &#65533;a typical home computer&#65533; at every

opportunity through the 1980s. That was all they did. I don't recall it
being used on air for anything much more technical than demonstrating,
briefly, what the "typical home computer" could do.

The entire project was a complete waste of time and money. Sinclair (and
Commodore) did *vastly* more for the advancement of home computer
technology in Britian during the 1980s than the BBC.

*For certain specific values of "nobody". Schools (whose purchases were
subsidised) and rich kids.

I make no comment as to the merits of the BBC spending licensepayer funds to

compete in the computer market, nor attempt to compare the BBC machine to Spectrum of C64. However I do believe that the BBC contains some pretty nifty engineering:
- a 3 pass macro assembler built in to the BASIC
- a CLI & OS that allowed multiple extensions to be plugged in, so it was very easy for 3rd party development of ROMs that added additional CLI commands, device drivers, file systems etc that were all interoperable.
- econet - LAN client/server technlogy that is long since surpassed by ethernet and TCP/IP but I think was way ahead of anything that came 'out of the box' with other 8-bitters, and probably matched only by Apple 2 3rd party products.
- the 'tube' interface - a co-processor port. From what I understand, ARM microprocessors that form the basis of so many embedded devices today started life as a BBC co-processor

Also, 'elite' was first developed for the BBC

Subject: 30% OFF ATARI GAMES! NEW STUFF! XMAS IN JULY! 7/1-31/2011!

30% Off Atari Games!!! XMAS IN JULY!!! 30% Off Atari Games!!! XMAS IN JULY!!!

From My Own Collection I've Added Many Items For Xmas In July! I'll Remove
Them In August If They Dont Sell! Back In The Vault, My Personal Collection!

I've just Added/Updated 11 Atari Catalogs! 26007800.txt, 5200.txt, books.txt,
jaguar.txt, lynx.txt, 8btbooks.txt, 8bt_hard.txt, 8bt_soft.txt, stbooks.txt,
st_hard.txt & st_soft.txt!They have NEW ADDED INVENTORY & BRAND NEW CATALOGS!

I've Also Redone All My Atari Catalogs, Added NEW Stuff & BRAND NEW CATALOGS!

NEW FREE Catalogs for NEW & USED Classic Atari 8 Bit & ST Computer Lines Plus
Atari 2600, 5200, 7800, Jaguar & Lynx Games! Atari Hardware, Games/Software,
Books/References & Accessories!Eleven Catalogs in all! View Catalogs on-line,
Download them or Feel free to Request catalogs by E-Mail! Really, it's not an
inconvenience!Please specify 8 Bit, ST, 2600, 5200, 7800 Jaguar, Lynx or ALL!
Then I'll send you them by E-Mail! Let me know if I can attach files to your
E-Mail! Cruise the Web at http:\\BensCatalogs.Atari.org or BenSells@Atari.org
call(503)256-9974!Come For The Sales, Stay For The Service!Call/E-Mail Today!

30% Off Atari Games!!! XMAS IN JULY!!! 30% Off Atari Games!!! XMAS IN JULY!!!

Buy an Atari Computer, Console or Hand Held, Get Your Games 30% Off!

From My Own Collection I've Added Many Items For Xmas In July! I'll Remove
Them In August If They Dont Sell! Back In The Vault, My Personal Collection!

Buy an Atari 800xl, 65xe, 130xe or xegs and Get Your Atari Games For 30% Off!

Buy Atari 520STFM, 1040ST, Mega ST2 Or Mega ST4, Get Your Games For 30% Off!

Buy an Atari 2600, 5200, 7800, Jaguar or Lynx Hand Held, Get Games 30% Off!

Get 30% Off Games when Purchasing any Atari Computer or Game Player!

To expedite your order, Download Catalogs, Delete what you dont want, E-Mail me the rest! Please include your Mailing Address so I can figure Postage and Handling so I can expedite your Order! My Atari SoftWare and Book Catalogs are sorted alphabetically by Title so E-Mail your Want Lists to Bravo Sierra!

Yeah, a 2764 won't work for BASIC. You'll need 68764 or the like or, as
mentioned in another reply, buy a BASIC ROM from Best. If you don't find
what you need, I can burn you whatever rev you want onto a 68764 and send
it at cost.

Apparently Rick's not the only one who hasn't moved away from eprom...

I think the Bob's 1200XL built in BASIC mod piggybacked a 2764 onto a
27128 with the OS. He did a lot more then one mod but I am pretty sure
at least one was an OS in 27128 vs. the two 2764 ROMs a 1200xl would
normally be used. If Brian goes with a 2764 it would probably be less
work then making the on board BASIC socket work.

Rick

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from 1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, the Atari computer intellectual property rights, along with the home market rights to the Atari trademark itself, are owned by Atari Interactive, Inc., a subsidiary of Atari, SA of Lyon, France.

That's right! The long awaited Space Harrier for the 8-bit is out and We
have it at Kjmann's Atari Sales.

Come Check out a video of it in Action and see what we are calling the most
well written game of all time on the 8-bit.

Page 4 of the Carts Section.

Check it Out!

http://www.atari-sales.com

Way to go, Sal and co.!

That's a bold claim "the most well-written game of all time on the
8-bit," but having watched the video I'll grant you Space Harrier
appears to be one of the most graphically-advanced 8-bit games, and
with music and voice. There's still the matter of play value and so
forth that I don't know about yet (but it looks to be there).

You put a fair price on it, hope you make a little money too!

I must have missed the point in this thread somehow. Where does it
become less work to piggy-back a 2764 onto your OS than to just put the
correct chip in the BASIC socket?

Hey all, I just delivered some Atari equipment to Judith Hammerle of the Digital Gaming Museum in Sunnyvale CA, they are setting up a display of Atari memorabilia as part of a remembrance of the glory days of Computer Gaming Companies in Sunnyvale. Judith had some questions she wanted me to ask the members here due to everyone's knowledge of Atari's history and I quote;

"I'm trying to figure out all the places Atari occupied in Sunnyvale, and it's not easy. For example, this site says that Atari was at 1196 Borregas. The Energy Czar manual lists 1195 Borregas Avenue as the Consumer Division. Were they in both places? Maybe. I know they started in Santa Clara,at 2962 Scott Boulevard. and that the famous Pong quarters overload was at Andy Capp's Tavern on El Camino (157 W. El Camino Real, now Rooster T. Feathers, a comedy club). But there's a mention of an "abandoned roller rink" where the first manufacturing" was done, but I can't find an address. I also have 1265 Borregas Avenue, site of Atari's first headquarters, and 1340 Bordeaux Drive, Customer Service Department (off the Energy Czar manual).

Do you suppose that there is someone on the Atari group you mentioned who would know these things? Can I join the list and ask questions? Any help you can give clarifying Atari in Sunnyvale would be appreciated."

I'm going to get Judith on the newsgroup so you can post any answers here or email them to Judith at judith@digitalgamemuseum.org.

I've made attempts to mention important Atari addresses in my Atari
history timeline:
http://mcurrent.name/atarihistory/atari.html

First location (1972):
2962 Scott Blvd., Santa Clara, CA

The roller rink set up by Bill White for Pong production (1973):
1600 Martin Ave., Santa Clara, CA

Mass production and company hq (1973):
14600 Winchester Blvd., Los Gatos, CA

Kee Games (1973):
330 Mathew St., Santa Clara, CA

Kee Games (1974):
1280 Reamwood Ave., Sunnyvale, CA

Atari (incorporating Kee) (1975):
2175 Martin Ave., Santa Clara, CA

Company hq at Moffett Park (1976):
1265 Borregas Ave., Sunnyvale, CA

Coin-Op (1982):

790 Sycamore Dr., Milpitas, CA

Atari Corp. (1984):
1196 Borregas Ave., Sunnyvale, CA

Atari Games Corp. (1984?)
675 Sycamore Dr., Milpitas, CA

I'll assume the BASIC chip on his 130XE was soldered in which means

the replacement will have to either be soldered or a socket soldered
anyway. I don't like the quality of post Tramiel PC boards and would
take piggybacked over soldering on a 130XE moboard.

Brian's at an incredible number of traces fixed and still having
problems. IMHO it would pretty much cut his work in half to just fix
the OS socket and piggy back an EPROM on it then fix the BASIC ROM
socket. For that matter, path of least resistance may be a BASIC cart.
Heck, its a hobby, he can do whatever he wants.

Rick

The following is taken directly from
http://www.cooganphoto.com/gravitar/1982.html which is a mirror of the
former web site by Donald A. Thomas, Jr.

An Atari, Inc. Facilities Map dated October 1982 depicts 70 Atari
locations within the Silicon Valley. The locations, in order as they
appear on the map, the number assigned to the location by Atari and the
departments (if known) are as follows:
SUNNYVALE (33 locations)
        1265 Borregas Avenue (#100) [Corp. Office/Game Room]
        1272 Borregas Avenue (#101) [Consumer Engineering]
        1215 Borregas Avenue (#102) [Company Store]
                    [2600 First Production Facility]
        1320 Bordeaux Drive (#103) [Service Center]
        1196 Borregas Avenue (#104)
                    [Consumer Product Programming]
        1399 Moffett Park. Drive (#105)

[Home Computer Marketing, Sales & International]
1195 Borregas Avenue (#106)
1349 Moffett Park Drive (#107)
[Reseller Shipping & Creative Services]
275 Gibraltar Drive (#108)
[Consumer Product Programming]
1173 Borregas Avenue (#109)
[Manufacturing and Product Engineering]
1171 Borregas Avenue (#110)
1180 Bordeaux Drive (#111)
360 Caribbean Avenue (#112)
390 Caribbean Avenue (#113) [Atari Company Store]
1340 Bordeaux Drive (#114)
1342 Bordeaux Drive (#115)
1344 Bordeaux Drive (#116)
1346 Bordeaux Drive (#117) [Customer Service]
155 Moffett Pk. Drive (#118)
[?Secret? Lab for Quick Games]
1383 Borregas Avenue (#119)
1393 Borregas Avenue (#120)
1183 Bordeaux Drive (#121)
1235 Bordeaux Drive (#122)
1312 Crossman Avenue (#123)
[Customer Service, Product Specialists & Parts]
292 Gibraltar Drive (#124)
603 Baltic Way (#125)
234 Caribbean Drive (#126)
1394 Borregas Avenue (#127)
1105 Fair Oaks Avenue (#203)
1285 Forgewood Avenue (#206)
570 Britton Avenue (#211)
845 Maude Avenue (#225)
760 San Aleso Avenue (#228)

SANTA CLARA (18 locations)

3900 Freedom Circle Drive (#208)
700 Laurelwood Road (#220)
750 Laurelwood Road (#221)
2455 Augustine (#205)
492 Sepena Court (#223)
2952 Bunker Hill Lane (#232)
605 Laurelwood Road (#233)
3910 Freedom Circle Drive (#234)
5200 Great America Parkway (#250)
2933 Bunker Hill Lane (#251)
2903 Bunker Hill Lane (#252)
5101 Patrick Henry Drive (#253) [Facilities]
3052 Bunker Hill Lane (#254) [Facilities]
3032 Bunker Hill Lane (#255) [Facilities]
5104 Old Ironside Drive (#256) [Facilities]
5071 Patrick Henry Drive (#257) [Facilities]
3051 Tasman Drive (#258) [Facilities]
5084 Old Ironside Drive (#259) [Facilities]

SAN JOSE (12 locations)

        3099 Orchard Drive (#204)
        2710 North First Street (#212)
                    [Home Computer Engineering]
        2541 Seaboard Avenue (#213) [Pilot Computer Production]
        2820 Orchard Parkway (#214)
        30 East Plumeria Drive (#215) [400/800 Production]
        60 East Plumeria Drive (#216) [400/800 Production]
        590 Brennan Avenue (#217)
        2701 Zanker Road (#218) [Home Computer Engineering]
        2521 Seaboard Avenue (#222)
        2038 Concourse Drive (#224)
        355 River Oaks Park (#230)
        1632 Berryessa Road (#231)
MILPITAS (7 locations)
        715 Sycamore Drive (#201) [Coin-Op Facilities]
        735 Sycamore Drive (#202) [Coin-Op Facilities]
        790 Sycamore Drive (#209) [Coin-Op Facilities]
        1501 McCarthy Boulevard (#210) [Coin-Op Facilities]
        601 Vista Way (#219) [Home Computer Warehouse]
        675 Sycamore Drive (#226) [Coin-Op Facilities]
        765 Sycamore Drive (#227) [Coin-Op Facilities]

> Come Check out a video of it in Action and see what we are calling the most
> well written game of all time on the 8-bit.

So out of curiosity, what are the advantages to the cart version versus
a disk-based one (assuming it's being made available)? Not to be cheap,
it's just (1) hard to justify [*], and (2) I'm curious about these fancy new
carts. :)

[*] Though some day I will buy a copy. :) This game is tops!

Well the Reason for the Cart is that the game takes up 1024k of Space.
So chris put it on a 1024k Cart so it could bank switch the data one
64k chunk at a time from the cart game in to the Ram of the system
(which is on average 64k).

Also, Disk Loading would be unbearable. it would take forever to load
each level and would have to stop the game to load more data sometimes
in Mid Gameplay.

Ahah! Got it. Neat. I look forward to more "big titles" like this down
the road. ;) Time to save my pennies!

Greetings,

I've been using Atari 8-bit Machines for a few years, and am always looking
for items to add to my collection.

*****
Current want List....
Atari 8-Bit Items...
SpartaDos X cartridge (I have the original Manuals and etc.)
Atari 410 or 1010, program recorder. Pefer a 410 if I can find one.
Happy Controller board for a 1050, (Not the Happy Board).
However if you have both installed in a working 1050 for sale,
then I maybe interested if price is right.

ICD Multi I/O 256meg or 1meg unit.
Sparta DOS US Doubler for 1050 upgrade, or
1050 with the US Doubler already Installed.

Also, looking for Midi Mate, and any voice/audio digitisers and
Video/Scanners for Atari 8-bit.

Contact me at:
phantomm@suddenlink.net if you have any of the above items for sale or
trade.
Or If you have any Atari 8-bit items, that are rare, or not well known
about.

thanks,
Barry

So the other day at California Extreme (the annual arcade & pinball
show in the SF Bay Area) I ran into Seth & Michelle, the duo that
makes up the live chiptune band 8 Bit Weapon (http://www.8bitweapon.com/)
and asked if they're ever going to do any tunes with Atari 8-bits.
(They use a lot of C=64 and SID, some Nintendo Gameboy, Apple II, Atari 2600,
etc.)

Turns out, they don't have an 8-bit, and would like to get one to add some
POKEY to their music. (I think Seth mentioned preference for an 800XL...
I had my 4yo son running away when I was trying to talk to them, so cut the
conversation short :))

Has anyone got a system they'd be willing to donate to the band, so we can
get some representation? ;^) I've only got my 800XL and 1200XL, and a torn
up 800 that I used (and will use again) as an exhibit piece at my
Atari Parties out here in Davis, CA.

I do get the difference between a real newsgroup reader and google
groups. Since the last time this topic came up I certainly didn't know
and I suspect from the responses some people weren't aware of it
either, there is google groups killfile functionality for firefox. You
need to get
grease monkey
http://www.greasespot.net/
then d/l a script
http://www.penney.org/ggkiller.html

It seems to work slicker then snot on a doorknob for routine killfile
by author and I think it works with wildcards. Now if I could only
figure out how to get it to killfile by subject...

Rick

I am looking for loading the high speed driver for APE before booting
non-DOS formatted games like Broderbund Drol boot disk. Any help? JT

```

I be pretty slow. Took me 4 months and the Ultima artifacting question
before I got around to reading Mapping the Atari again and getting
this sort'a worked out.

Not that anyone would want to do it but replace the lines in my GR. 12
redefined character set demo with these. It should be as easy as
loading the first program with all its data statements then
ENTER"D:THISONE.LST" or whatever you want to call it. Of course type
over or entering from the BASIC editor would work too. I could have
cut and pasted the data statements from the original post but I am
trying to save on electrons. j/k

Using Atari800win Plus 4.0 it looks pretty good after setting [View =>
Artifacting => Blue/Brown 1]. I have to take another look at this on a
real Atari and a decent composite monitor to see if it still works. I
WISH Atari in their wisdom had given us a 256 character set instead
of 128. I was fooling around with my new EPROM burner, getting old
character sets off of IBM CGA cards when this limitation hit me. 256
characters would have been so much more useful then inverse. A games
that used artifacting like Ultima and Caverns of Calisto could have
been done in GR. 0 with better performance and smaller memory
footprint. Anyway, a pretty good show and tell on what can be done
with a redefined, artifact, graphics 0 character set.

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from 1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, the Atari computer intellectual property rights, along with the home market rights to the Atari trademark itself, are owned by Atari Interactive, Inc., a subsidiary of Atari, SA of Lyon, France.

HardwareDoc (of the ABBUC club) is producing the Midimate V2.0 currently - it comes as a DIY kit with solder pads for a SIO plug and will hopefully be available on the Fujiama 2011 Atari meeting in Lengenfeld (Germany, near the Czech border). He also produces Nunchuk controller adaptors (very nice for games like Space Harrier):

<http://www.abbuc.de/~hardwaredoc/projekte/hardware/midi/index.html>

So on a whim I bought the AtariLab starter set (w/ temp sensor).
I gues only one other kit (light sensor) was made. I'll prob. grab
that eventually, but in the meantime, are there any homebrew things I
could do with this thing? Thx!

Back in the 90s I used a serial interface to connect my 800xl to my OS/2
machine, sending over the temperature every few minutes to update the
temperature on my website. At the time it was very cool. :-)

> Sent from my computer

Another subjective history. When micros first came out I was already 'in career' as a chemist. Boring, tedious, repetitive work: Mind numbing. I immediately saw micros as a way to automate some of the work in the lab so I bought myself an 1802 based kit and designed my own A/D daughter board. You wouldn't believe the resistance I got other people at work. Anyway shortly there after Atari came out with the 400 and 800 which made everything that had come before with the possible exception of the Apple II obsolete.

It would be another four+ years before things I had hoped for in data storage and elimination of things like transcription errors and simple errors reading and analog needle position were eliminated. It took even longer for people like HP and Beckham to start instrumenting their spectrometers and HPLC equipment. I mean you really had to be their when your working with a drug that sells for a $1/4 million/ounce for a week and you loose the results because the ink ran dry or the paper ran out in your chart recorder! I mean you start fearing "No G.I. Joe with the Kung Fu grip for little Jimmy this Xmas!"

So anyway other then me I'll tell you up front there is a real lack of interest in anything that relates to this topic. Later I went on to J/S switched 300 Watt 120V triac switched controllers for the Atari with more then a few relay and A/D stuff. For instance that cartridge bird nest nightmare functioned<had I wire wrapped it robust enough to survive shipping> was an 8 bit D/A converter. Thing is I still find it

a fascinating topic!

OK, one of the mostly ignored <has it really been decades since the first set back thermostat was made?> is home energy smarts. It is still on average in the 1950's. All the dumb stuff like insulation and double paned windows has been done but there just isn't a lot of smarts built into the system. Since you live in Davis there is nothing I can tell you about swings in temperature from cold Tule fog in the morning to my gawd I think I am going to melt suffocating heat in the afternoon.

Now if a guy just had a simple system like a temperature sensor or two <s>he could make some automatic decisions. Minimally put one sensor outside in the sun and if air temp or radiant heat was enough to cook an egg at 7AM you may want to shut off the heater before the house goes from heater on to air conditioning on in the blink of an eye. If it shuts the heater off and hour earlier and the air conditioning comes on an hour later, well that saves money.

If you had two sensors outside, you could put one in the sun and one in the shade to give you an idea of air temp vs. radiant heat.

Of course you couldn't do it with existing construction, to much dust and bat poop in the attic, but you could put the attic to work as a solar collector and storage. Just two simple fans with the option of turning them on and off independently. One fan blows hot air out to keep the temp down while the air conditioning is running. You shut this one off an hour or so before the sun goes down to store heat. Second fan circulates hot air from the attic into the living space when and while the air in the attic is warmer the the air in the living space. If you wanted to do something a little more sophisticated, you could feed the preheated air from the attic into the furnace system to recover heat lost through the ceiling or whats left of solar. i.e. if the attic is at 50 degrees and the outside air is 40, feeding the attic air into the heater will make it do more work for heating the living space.

Ah, I still get sucked into this. If I had any sense I would have been into more sexy projects like Mega Squirt fuel injection!

Posting-Frequency: 10 days
Last-modified: November 28, 2010

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from

1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, the Atari computer intellectual property rights, along with the
home market rights to the Atari trademark itself, are owned by
Atari Interactive, Inc., a subsidiary of Atari, SA of Lyon, France.

Rick, that was a very detailed account. Wow.

Gozar, how exactly did the temperature probes work with your website?
That is really really cool.

You know what would be cool? Having a Atari BBS with a temperature

probe set up like that. Select a option on the BBS and get the probe's
reading.

Heck, would be good while computing at your desk and you wanted to know
what the room temperature was.

you know, I found the Atari 800 XL and the Atari 400 keyboard pinouts
were very similar.   Just had to switch a wire or two. Now I was able
to get a 400 keyboard to work on a 800XL, but never tried it the other way.

I am pleased to announce... the Seattle Retro-Computing Society's
inaugural meeting, on Saturday, June 25th, 2011!

Do you do any of the following with old computers near Seattle?

   + Use them
   + Collect them
   + Play games on them
   + Write programs for them
   + Develop new hardware for them
   + Help other people do any of the above

If your answer was "yes," as I expect it will be if you're reading this
near Seattle, then the SRCS is for you! We exist so you can show off
your awesome stuff, bounce ideas off of fellow enthusiasts, and be
inspired by one another's achievements, plans and aspirations.

No idea is too big or too small, and we're not picky about what flavor
of vintage machine you prefer! Come on down and tell us about it!

The meeting is graciously hosted by the Living Computer Museum, a
relatively new organization which is building a computer museum in
Seattle's SODO neighborhood. There will be refreshments, presentations
on various vintage topics of interest, and enough table space & power to
set up anything you may want to show off!

For further details, please see our page at http://srcs.nfshost.com/.
Hope to see you there!

Greetings,

Looking to purchase a original ICD SpartaDos X cartridge.
Version of cartridge isn't important to me, as long as it works.

If by chance you have a damaged one, I may be interested it
it as well, as I do circuit board repair among other things.

I have original SDX Manual and the reference manual.
As well as disk based Sparta Dos and manuals, ToolKit,
FlashBack and etc.

Need SDX cart for use with My ICD Multi I/O for a project.
Surely somone has a extra one that there not using.
I've some cool 8-bit software and some hardware for a nice
trade.

Will pay resonable price, or trade Atari 8-bit, ST,STe,Falcon hardware,
software, books/manuals of equal value.

Contact me at: phantomm@suddenlink.net
Will provide phone number so we can discuss.

Sincerely,
Barry
phantomm@suddenlink.net

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family
of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE,
130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from 1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, the Atari computer intellectual property rights, along with the home market rights to the Atari trademark itself, are owned by Atari Interactive, Inc., a subsidiary of Atari, SA of Lyon, France.

Sorry for the two postings of the FAQ in quick succession. I won't bore you
with the full explanation.

On the bright side, I think we have all the pieces of the faq posting tools
working properly again, so hopefully things will go smoothly for a while.

Here are some photos from last Saturday's Atari Party, that I held
(with tons of help from friends) in Davis, California:

  http://www.newbreedsoftware.com/atariparty/2011/photos/

It was mentioned ahead of time in a couple local papers
(Sacramento News & Review, The Davis Dirt, and I think also the
Davis Entperirse).

PLUS, a few of us got to hang out in CW31 TV's green room during that
morning's live broadcast of "Good Day Sacramento" to play games and
talk about the event. I got my butt kicked at Mario Bros. on live TV. :^P

Links to even more photos, plus the video, can be found under
the "Latest News" section of the 2011 event's home page:

  http://www.newbreedsoftware.com/atariparty/2011/

Enjoy! And thanks to everyone who came to show off their game systems
and computers, the volunteers who helped us set things up and clean up
afterwards, and of course the many sponsors who helped pay for the event
and donated lots of give-aways.

BTW, we had over 100 people show up (based on raffle ticket counts, there
were at least 100 people; though we stopped giving them out when we did the
raffle, about 3.5hrs before the event ended, so it could've been closer
to 120 or 150, for all I know!)

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from 1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, the Atari computer intellectual property rights, along with the home market rights to the Atari trademark itself, are owned by Atari Interactive, Inc., a subsidiary of Atari, SA of Lyon, France.

NEWSGROUP BACKGROUND

comp.sys.atari.8bit was created in November 1986 (as part of the Great Renaming) as a direct replacement for: net.micro.atari8

comp.sys.atari.8bit is unmoderated, and has no formal newsgroup charter.

The comp.* hierarchy of Usenet newsgroups is managed by the Big-8 Management Board: http://www.big-8.org/

RELATED USENET NEWSGROUPS

Hello,

On 4 feb 2009, 19:29 I asked in this newsgroup with the same subject
something about running atari++.

Then I have received splendid helping replies.

In the main time I had many worked many times with atari++

With a new installation to Fedora Core 15, I unfortunately lost
the .ATR files in order to run atari++.

Sorry that I did not make a backup of those .ATR files.

Please can anyone send me the files again?
Or is there a site where I can download it?

Many thanks in advance for any answer.

Gaston Verhulst.

Strange enough, I wonder what you really need, because the emulator
itself doesn't require ATR files by itself, strictly speaking. These are
only (one of the file types of disk) images the thing supports. It also
supports binary executables out of the box.

IOW, I guess you probably need to be a bit more specific.

> Please can anyone send me the files again?
> Or is there a site where I can download it?

Not any ATR files. The emulator is still here:

http://www.xl-project.com/

though probably in a later version with more capabilities than you had.

So long,
     Thomas

Maybe he want to download ATR for using on the emu. Find some here :
http://pokeysoft.no/games/atari/a8list.htm
http://www.atarimania.com/
http://atari.fandal.cz/

I think you find almost everything you should need here.

Good luck
Hawk of Pokey Soft

Hello, thank you both for your quick replies.

Please, sorry that I have not more specified about the files.
In the mean time, I have found something of the right names in my
notes.
I didn't find them before ...
I was looking for MYDOS45.ATR and ATARIBAS.COM
And searching in Google for those words, I could download them from:
http://sourceforge.net/projects/atari800/files/ROM/Original%20XL%20ROM/
but in xf25.zip there is MYDOS45D.ATR and with that I have some
troubles.
I found the right one in
http://www.filewatcher.com/m/MYDOS45.ATR.92176.0.0.html
From now I can run and use atari++ successfully an do some tests and
save programs.

Kind regards,
Gaston Verhulst.

With MYDIS45.ATR and ATARIBAS.ROM, from now I can write programs which
I can save and load and play.

In your links above there are many games with either .atr or .bin
format.
I can easily donwload them in my home directory.
Please how can I run one of those games with the atari++ emulator?

Many thanks in advance for any helping answer.
Gaston Verhulst.

Load them as disk images into the virtual disk drive. On the right hand
menu, go to "drive 1", select the item "Image.1" and then, in the file
requester, select the file you want to load. Both disk images as well as
binary load images will work "automagically".

Greetings,
     Thomas

Hello,

there used to be numerous flame-wars between Sinclair-, Commodore-, ATARI-
users and users of other classic computers during the last 30 years and I've
made a poll where you can decide which classic non-IBM computer is the best.

You can vote here anonymously:
http://www.misterpoll.com/polls/527628

Here you can view the current results:

http://www.misterpoll.com/polls/527628/results

Here's the message forum of the poll:

http://www.misterpoll.com/forums/252088

The problem is best for what? That was the point in my view. At the time, if
you were educating you could not go wrong with the BBC, but if you were on a
budget and needed it to be a jack of all trades, arguably the Spectrum was
the one.
 Lots of other computers were, in my view better, but did not get supported
or were marketed badly.

 Brian

In the UK market where British was always best (even when it clearly wasn't)
and people had no money (or were just too tight), but just about anywhere
else those options were pretty poor IMO.

The ZX was cheap and cheerful but it was useless as a proper home computer
due to it's awful keyboard and overall size. The BBC might have had a lot of
educational titles and the computer of choice for that reason in the UK, but
elsewhere in the world it didn't make that much of an impact.

We had Microbees in high school, and they seemed to be a decent solution for education but realistically they could have been replaced with C64's and it's massive range of educational titles and programming languages (including BASIC extensions) would have been a far better solution. The Atari 8 bitters had a lot going for them too IMO, except for the ones with the shithouse keyboards.

I voted for the Apple II as best during that time period.
Suprisingly, it is scoring pretty low.

However, today, I prefer the Commodore
64 for games and as a hobby computer.

The BBC Micro was a bizarre project. I've never to this day seen a good explanation of just why the BBC needed to release its own computer to accompany what was really a rather unimportant television programme. There isn't a Top Gear motor car, is there? The result of it was wholly negative, with schools stuck with zillions of computers that were an evolutionary dead end in technology terms, all because of that "BBC badge".

It's like that stupid Domesday video disc. What on earth was the point of

that?

Ian

I voted for the Sinclair ZX81 due to its low IC count -- only 4 or 5
(depending on RAM-type). The keyboard reminds of modern multitouch
screens on mobile devices and there is an emulator for Android:
<http://www.appbrain.com/app/zed-ex-(beta)/org.helllabs.android.zx81>.
The ZX81 was also the cheapest of the classic computers.

I have an Apple II Europlus but I don't think the probably resistive
keyboard is that good. You have to strike the keys hard in order to
type. Mine stood in a damp unheated garage for many years and that might
have affected the keyboard. It also has lots of ICs that could break.

There was also the Luxor ABC 80 that had a very good capacitive keyboard
<http://en.wikipedia.org/wiki/ABC_80>. Quite a few chips there as well.

I also have the Commodore 64 and it works well and is interesting to use
with COMAL cartridge.

Oh yes, you really are making my point here. I deliberately went UK as the
originator went US Ataris, though nice machines were far overpriced over
here until it was too late. Yes, the silly stepped flat pad keyboard on the
early Ataris was rubbish. The 800XL I had with disc, printer interface etc,

was a great little machiine as I got it cheap end of line.
 The Spectrum, the later models were actually quite good. I actually used
one to do online editing work in the 80s. The snag was the edge connector,
if only it had had a proper plug it would have been respected more.

Over here of course the Dragon was quite popular, and as far as I'm aware it
was basically a slightly redesigned Tandy color computer.

There were lots of oddballs though.
Oric, Lynx, Enterprise, Sord, Einstein, etc.

Not to mention Memotech.

Brian

the most important thing about the bbc micro computer coming from a
comprehensive was that there were not enough for all the kids in a
class and that the teachers children all had one at home....

Hi all,

I am using the software, Atari 800 WinPlus, on Vista to emulate the
Atari 8-bit computers. I was testing the Ultima 3 game (*.atr file)
and I noticed that it only displayed in black and white. There were no
colors. It seems to work though.

I tried some other games, and they did have color, just not Ultima 3
(and perhaps some others in the Ultima series).

I would really like play Ultima 3 in color. Has anyone encountered
this situation before and know how to resolve it?

Thanks in advance!

Heh, well of course the best of all would be the excellently awesome
Commodore 64, DUH!

Yeah, that's how I voted hehehehe

Why would you do that when the 128 does everything the 64 does and so much
more?

Tom L

Er, you do realise the BBC didn't actually design and build the BBC
Micro, don't you? It was made by Acorn and just badged/endorsed by
the BBC.

So it wasn't an evolutionary dead end either - it's successor the
Acron Archimedes was backwards-compatible with the BBC Micro to some
extent, and a very nice piece of kit to boot.

Chris

I know that, but they badged it, marketed it and endorsed it. I just found the start of the first episode of The Computer Programme on Youtube, and it's basically an advert for the BBC Micro. It would have been understandable to an extent if it were some kind of programming course and they wanted standard hardware, but it was just the usual general BBC documentary. I don't really understand what they thought they were doing; the programme was too vague for anyone actually involved with comptuers- sort of, "you can run a car factory with one" type of stuff- and who else was going to be interested? It certainly didn't teach you to use a computer. Computers are tools, and people got to know how to use them when they had to, like my mum who learned when she got her first job with a word processor.

So having a BBC Micro just seems inexplicable for any practical reason. There wasn't a BBC food mixer to accompany Fanny Cradock or a BBC lawnmower to accompany Gardener's Question Time.

I can't help getting the feeling it was just some Beebocrats wanting to feel more important than they deserved. Probably the same reason for the equally incomprehensible Domesday video disc thing.

> So it wasn't an evolutionary dead end either - it's successor the

Well *shrugs*. We all use PCs and Macs these days, and by 1982 it was pretty obvious already that that was more likely kit to conquer the world. Instead, we got this bizarre thing that the BBC endorsement and heavy plugging basically said, "this is the computer that nice middle class Blue Peter families have", and as a result they ended up in schools being like nothing anybody uses in the real world.

But then, I've never understood why there was this big "computers in schools" thing either. If you haven't got one at home, you don't get enough experience to really learn anything useful. If you've got one at home, why do you need lessons at school? I taught myself Z80 assembler. I think everyone else did, didn't they?

Sorry, waffling. I just think the whole idea of a BBC micro was bizarre.

Ian

That's ok at the beginning when no-one knows how to use a word processor
and companies expect to have to spend their own money training
employees. When some applicants have the skills already and others would
have to be trained before they could start working then they aren't
going to employ untrained people! It's not just a computer thing. Night
schools used to do courses in typing and shorthand etc to get you
qualified for admin jobs.

> So having a BBC Micro just seems inexplicable for any practical reason.

Someone had to put computers in schools it just happened to be the BBC.
The BBC has always been involved in education (after all it is one of
the reasons they exist).

Later Acorn computers were equally overrated.

I had an Acorn A3000 and there was nothing remarkable about it, in fact the
best thing about it was that the rather nice monitor worked very well with
my Amiga when the 1084S dropped it's flyback..

I thinkt the commisioning of a BBC Microcomputer was more to do with
education in general than just the TV programme.
The BBC's close links with governments and its non-commerical angle
made it a powerful entity in which to educate kids on technology and
IT.

In that respect I think it did very well and the BBC was a very
versatile machine with its User Port, Serial and Parallel ports,
pluginable ROM modules and a decent keyboard and monitor.
It wasn't quite up there in the gaming end however.

BloodBaz

I remember paperweight!

Back when I was in High School, we had just gotten in some new 800XL
machines and I ran paperweight on them in front of the "computer admin."

His reaction was priceless, yet he trusted me not to have destroyed the
equipment.

Ah.. that brings back memories.

We had some educational software *on cassette* for the Atari and I
remember that with a single POKE you could activate the 410's motor and
just let the speech play through, while you were secretly playing.

There was at least one and maybe two replacement 400 keyboards; one was the
BKey or a
name very similar..

Yes there was. They weren't on the market for long, IIRC. I can't
remember who made them or their approximate cost, either.

I see the cart games alone are going for at least $10 each. I offered
the person $50 total which includes UPS shipping and he accepted. I
think I got a good deal. He was trying to sell the lot for $20 locally
and no takers. I was surprised.

You could also rewire a standard keyboard for it. I recall my dad doing
that with ours.

A. G. Lisi's E8 model may be showing us what both our space & time
really are.

(Click link below.)

http://www.amperefitz.com/e8.htm

Crystals and chemical compounds are tied up with group theory which
best explains (mathematically) exactly why they form the particular
way they do.

Lisi's E8 model is a group theory model that may be showing us why our
space forms the way it does via frequencies that cannot be directly
measured from inside of our particular space-time realm (Wheeler -

Feynman).

Really?, I will have to look into that. Wonder how hard that would
be. Would be nice to hook some cable up for a cheap PC keyboard

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from 1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, the Atari computer intellectual property rights, along with the home market rights to the Atari trademark itself, are owned by Atari Interactive, Inc., a subsidiary of Atari, SA of Lyon, France.

NEWSGROUP BACKGROUND

comp.sys.atari.8bit was created in November 1986 (as part of the Great Renaming) as a direct replacement for: net.micro.atari8

comp.sys.atari.8bit is unmoderated, and has no formal newsgroup charter.

The comp.* hierarchy of Usenet newsgroups is managed by the Big-8 Management Board: http://www.big-8.org/

RELATED USENET NEWSGROUPS

I think the BKey was in the $50-$70 range in 1983 dollars.

In UKP they would have been close to £100. I remember thinking they were
too expensive. OTOH, I had an 800 so I wasn't too worried.   :-)

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from 1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, the Atari computer intellectual property rights, along with the home market rights to the Atari trademark itself, are owned by Atari Interactive, Inc., a subsidiary of Atari, SA of Lyon, France.

NEWSGROUP BACKGROUND
comp.sys.atari.8bit was created in November 1986 (as part of the Great Renaming) as a direct replacement for: net.micro.atari8

comp.sys.atari.8bit is unmoderated, and has no formal newsgroup charter.

The comp.* hierarchy of Usenet newsgroups is managed by the Big-8 Management Board: http://www.big-8.org/

RELATED USENET NEWSGROUPS
  alt.binaries.comp.atari8bit
    Programs for Atari's 6502-based orphans.

  comp.sys.atari.advocacy
    Attacking and defending Atari computers.

  comp.sys.atari.announce
    Atari related hard/software announcements. (Moderated)
    Moderator: Kevin Savetz
    comp.sys.atari.announce web page: http://www.atariarchives.org/csaa/

  comp.sys.atari.programmer
    Programming on the Atari computer.

I was fooling around looking for some docs on my Jupiter Ace and came
across a listing for and Adventure game. IIRC the author had hacked MS
BASIC to run on his terminal based SBC. I tried it with the Atari800
emulator using MS 16k ROM image and it seems to run just fine w/o
modification.

```
1 REM *** Discovered circa 1980 on a Commodore PET
3 REM ***   at Hereford Technical College
4 REM *** Resurrected & bugfixed By Jon Bradbury / micro_brain
5 REM ***   from a yellowing 31 year old dot matrix printout
6 REM *** http://forum.6502.org
7 REM *** For UK101 8k BASIC, 71 character lines but should work on
all.

<snip>

Nice work but I think something went wrong with converting the listing.
Like on this line:
460 FOR J=1 TO X:Z$=CHR$(RND(1)*15):W$(X)=W$(X)$:NEXT J,X
Do you still have the original? I like to try it out too.

Later, Katzy.

I pasted this into AppleWIN with the IIe ROM, and it runs fine
but with a few things that don't compute. For example, if I just
make a move in the beginning, it tells me that I left the cave
without any coins, and lists a bunch of stuff that was available.

If I attempt to TAKE anything on the list, it says ?nothing here?.

Perhaps there are instructions somewhere that help you play?

Bill

The author is still active. You can reach him/reply to his thread
here.

http://forum.6502.org/viewtopic.php?t=3D1819

He just did a name change

http://forum.6502.org/viewtopic.php?p=3D14483&highlight=3D#14483

BUT it could be a problem with the MS BASIC version you are using.
I'm not up on all the versions, the one I am using is labeled
MicrosoftBASIC2.bin created 2001 and is a 16k image. I can't remember
where I got it from. You may be able to use the 8k Microsoft BASIC
with the disk based extensions but I haven't tried it yet.

If you need the 16k version of MS BASIC let me know. I can UUENCODE it
or maybe put it up for ftp somewhere.

Rick

No instructions but I think 1st move is always DOWN to enter.

If you are still having trouble you could maybe add

```
735 PRINT Z$ REM DEBUG MOVE
```

in the following section.

```
710 REM INPUT MOVE
720 INPUT "Move :";Y$:Z$=3DLEFT$(Y$,1)
730 J1=3D0:K1=3D0:L1=3D0
740 IF Z$=3D"D" OR Z$=3D"d" THEN L1=3D1
750 IF Z$=3D"U" OR Z$=3D"u" THEN L1=3D-1
760 IF Z$=3D"N" OR Z$=3D"n" THEN J1=3D1
770 IF Z$=3D"S" OR Z$=3D"s" THEN J1=3D-1
780 IF Z$=3D"E" OR Z$=3D"e" THEN K1=3D1
790 IF Z$=3D"W" OR Z$=3D"w" THEN K1=3D-1
795 IF (Z$=3D"L" OR Z$=3D"l") AND L=3D-1 THEN 490
796 IF (Z$=3D"L" OR Z$=3D"l") THEN 870
797 IF Z$=3D"Q" OR Z$=3D"q" THEN 1440
```

Thanks Rick, that helps lots. There are a few string errors in
the later sections, but I can fix those. I'm just surprised that
it works at all in the Apple IIe version of BASIC, usually known
as Applesoft II. It was written by MS back in the early 80's, or
even earlier. Thanks again.

Bill

Hello.

ricortes wrote in message
<8143bb3d-f022-43df-bfc9-a4e7c18c94b3@z7g2000prh.googlegroups.com>...

If you need the 16k version of MS BASIC let me know. I can UUENCODE it
or maybe put it up for ftp somewhere.

Rick

When you want you can ftp it anonymous:

ftp.nostalgia8.nl

Thanks.

Later, Katzy.

OK, I *THINK* I did it right. It will be in your upload directory.
Shows as 16,384 bytes so it should be good. Let me know if you have
trouble with the ROM image and I will give it another shot.

Rick

Shows as 16,384 bytes so it should be good. Let me know if you have
trouble with the ROM image and I will give it another shot.

Rick

Got it and am going to try to use it. In between I found a way to play the
game as it is, with FirstBasic for DOS, which you can download at
ProgrammersHeaven.

It looks like this:

 A doorway opens north.
A doorway opens west.
There are 100 silver coins here.
A nasty little gnome bars your way!
Move :? t
The gnome won't let you have it!
Move :? f
The gnome is dead!

```
Your vitality is reduced to 19
Move :? t
You now have:
.. 100 coins.
Move :? q
You have left the cave area with 100 coins.
You missed the doubloons
You missed the dollars
You missed the sovereigns
You missed the pieces of eight
You missed the byzantine coins
You missed the gold pieces
You missed the treasure coins

Your score is 630

@Bill. You have to find your way in the cave, collecting treasure and fighting
the monsters. Besides the normal commands for the several directions you can
use L for Look.

Later, Katzy.
```

```

Ah, thank you so much. Not being an adventure gamer,
I always forget to 'L'ook or check inventory. Have
you happened to find a command for that one?   :)

Bill

Me thinks in the best tradition of BASIC hacks this program the very definition of spaghetti code. Only one GOSUB in the entire program, everything else is a GOTO. Even for BASIC it is pretty bad. IMHO it was at least partially due to the platform and the times. I think a Commodore PET had a maximum of 32k memory<?>. It's been ~30 years since I last fooled around with one. People were always trying to save a byte or two by using one letter variable names like I$ instead of INVENTORY$.

That being said, when you get all the treasure on a level the program lets you know so you can start looking for a way to go deeper. In the finest traditions of the day, you are expected to map out the dungeon on paper with all the locations labeled so you can get a strategy going: Get the heal potion before the big fight for instance. I used to have literally reams of paper from taking notes and making maps for RPGs and Adventures of the day. Soon as auto-mapping became the norm so they would appeal to lessor geeks I left all that behind.

Rick

>Bill

In textadventure games it is I of Inv or Inventory. This one has not such a command.

I did level 1.

You can play the game in GWBASIC too, though you'll have to adjust the listing on three places (when the line breaks): 417 - below belongs to it; 490 - 520 belongs to it (goto 520); 1010 - 720 belongs to it (goto 720).

Later, Katzy.

OK, I *THINK* I did it right. It will be in your upload directory.
Shows as 16,384 bytes so it should be good. Let me know if you have
trouble with the ROM image and I will give it another shot.

Rick

When I tried the rom I got a crc error, can you upload it again, maybe zip it?

Later, Katzy.

I sent the zip too. Got 13,165 bytes on my computer, as bytes sent,
and on yours with ls -l command.

I am using it with Atari800Win.exe emulator.

Rick

Is this a cartridge binary?, or an 'Built-In' ROM?

I'm with Rick! When I first played Ultima III: Exodus, I had each one of
the towns hand-mapped out in a small journal I kept. I kept that up all
the way through Ultima V (on my ST), even recording the conversations of
the NPCs in each town.

The *only* way to truly play an RPG. :)

I am using it as an "attached" 16k cart in the emulator.

Foggy memories but I thought MS BASIC I & II on the Atari only came as
8k carts with a disk supplement. I'm not sure if this is a hack or
not. I took a look at it with a file viewer and it looks like it takes
up the full 16k.

Rick

I never had an old 800 unit. I bought the 400 and went from there. To
me, what you haave below is priceless. I would think most people would
ay about $150-$200.

I have Pinball Construction Set on floppy, from when I was a kid. I'd like
to have it available to play at my Atari Party this year, but would
prefer to boot entirely from SD2SIO or MaxFlash cart., so I'm looking
for an ATR disk image.

I found one via AtariMania, but it has graphical glitches ("junk" next
to some shapes, the balls leave trails of red rectangles, etc.)

Does anyone have one handy? (Consider my need "archival"... I don't know
how much longer my floppy will last, assuming it even still works... and
I don't have any means of creating or using a copyprotected duplicate
(e.g., a .pro disk image).)

Thanks!

PS: My 4yo likes pinball (we went to Pin-A-Go-Go last weekend, and he
enjoys pinball when we go to California Extreme), and he seemed to
understand & enjoy what little I showed him of PCS on my 800XL,
despite the gfx glitches. ;)

==========

I found this on the Holmes CD#1 at:

  http://ftp.pigwa.net/stuff/collections/holmes%20cd/Holmes%201/ATR%20Games/
Games%20M-Z/index.html

I don't know if the wrap on the news reader program will display the link
properly..

Thanks, I also just found a copy (a 1.5D disk, versus the SD disk I had)

here:

  ftp://ftp.pigwa.net/stuff/collections/atari_forever/Tools%20-%20atr/

Aside from the lack of graphical glitches (at least in Atari800 emu
on Linux... and the other copy I had had graphical glitches on both
Atari800 emu and my real 800XL), and the fact that the disk image is
larger, the only other thing I've noticed (so far) is that the screen border
is black. On the (glitchy) version, it's pinkish.

Oh, the disk you pointed to seems to be the same as the one I found
via Atarimania.

In any case, I found one that looks like it'll work. Maybe I should make
a PBCS verison of Bally's "Star-Jet", which my son really enjoyed at
Pin-A-Go-Go. :)

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from 1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, the Atari computer intellectual property rights, along with the home market rights to the Atari trademark itself, are owned by Atari Interactive, Inc., a subsidiary of Atari, SA of Lyon, France.

Probably - even the TI-99 had abstractions - everything was treated as a file. You open a file to disk devices, serial ports, parallel ports, everything is communicated to by records. Even the screen and keyboard was treated as a file in BASIC (but this was only in BASIC).

Devices were easily added using Device Service Routines (DSR's) in add-on cards or command modules (cartridges in TI-speak). Subprograms could be added similarly. The CALL FILES routine, for specifying # of open files allowed at once, was a subprogram in the disk controller card, for example.

The ROM/GROM had trig routines, floating point math, cassette I/O, keyboard scan (with support for multiple mappings, including "split keyboard" for games), an interrupt-driven sound list routine, an interrupt-driven sprite movement routine, and tucked in the ROM was a subroutine that moved a small assembly program to hi-speed RAM that rotated characters around the y-axis... always thought that was weird.

LIST could write to the screen, to a device (printer, disk), even to a DSR added by the TE-II cartridge - so you could do a LIST "SPEECH" and have it speak your program to you...

Oddly enough, that was actually how I got mine. More accurately, my
parents sat in on the timeshare presentation to get the computer but
never actually bought into the timeshare.

Thankfully, they subsequently realised their mistake and I ended up with
an 800XL 18 months or so later. About the best thing the Aquarius was
capable of was using FOR/NEXT loops to bog down the CPU in such a way
that the RFI with an AM radio placed next to the computer would make
'music'.

Yes, I remember the ad for the 'free computer'. I asked my parents to
go, but they somehow found out it was a gimmick for the timeshare...

Another good one was a promotion Texas Instruments did where you'd get
a free TI-99 if you bought carpet and had it installed...

Cool! I know practically nothing about the TI-99, so that was
fascinating.

IIRC, much of this could also be done with Atari Basic using the OPEN
command. It's been a *long* time since I've used it, but my
recollection is that devices other than disks, cassette drives,
printers, etc. could be accessed that way. I don't believe it applied
to audio, though; that could only be done via the SOUND command.

There's still a VIC-20 at my parents' house that we got from attending a
timeshare. We already have a C-64 at the time, so while we did plug it into a
TV and play with it a bit, I doubt it was used for more than 10 hours in its
entire life.

My mother came to actually start enjoying dickering with the timeshare
salesmen -- she must have gone to at least a half-dozen of them, collecting
those 5" black & white TVs that were also a popular giveaway, a cheezy "boat"
(rubber raft with a small electric trolling motor), the VIC-20, and a few
other things.

The C64 has a similar facility. One usually accesses tape, IEC bus devices (disk, printer, some memory card devices), and Expansion Port storage devices through BASIC's I/O normal commands. The stock RS232 code works that way too, though few use it anymore. I seem to remember that the screen and keyboard are accessible through that method also, though obviously most would rather use the regular non-file PRINT/INPUT/GET commands.

It opens/closes files and does I/O in a pretty common way, and has the "CMD" command to redirect LIST, PRINT, etc. to a stream (as long as it has already been opened for writing).

> Which most people didn't, just having cassette tape. But loading 48K in

Vectors are provided in the C64's "system" RAM area to allow supplemental drivers and command extensions to insert themselves in ahead of the stock Kernel or BASIC code. The 1541 drive came with such a driver on disk that one could load, which added a set of drive command shortcuts, the so-called "DOS Wedge". The 17xx RAM Expansion Units came with a similar driver that would set those devices up as RAM disks, in addition to adding the aforementioned shortcuts.

A friend has some Atari related hardware, and while I know little to nothing about them, I offered to see if I can find out anything for him. Also if this stuff is of interest to anyone, or should he just strip them for parts -

something he doesn't want to do if they can be used as designed.

Okay, he has 4 - 5 1/4 floppy drives. There are no model/SN stickers on any of them, but they are labeled "Centurian Enterprises" over the disk slot, and "Limited Edition" below it. They have a pair of 13 pin Atari peripheral connectors on the rear panel that match a connector type I've seen on his Atari 130XE.

Sorry I don't know more about them. He has other stuff, but he hasn't given me a list yet of what he has. I know there looks like quite a bit of stuff related to 400's, 800's and who knows what else. Should I bother posting about them after I get the information, or is there no interest?

Thanks for your time and patience,
Robby

At least some interest ... Did you post it on AtariAge.com too? More people
there nowaydays. I'd sure like to see what you got there.

Take care

Given the Centurians were the ~elite guards of Rome the drives were
probably part of a commercial disk duplicating system. *IF* this is
right then they will probably function as at least SSSD Atari disk.
You can't tell much else w/o doing some detective work. You can use
something like MyDOS to try different configuration to see what they
will accept as a configuration block and if they can format a disk in
that mode.

You can can also get some of this by popping the hood. i.e. If the contoller is a 1793 then it is single density, a 2793 or 2797 implies double density. Likewise any ram chip greater then 128 bytes implies extra functionality.

If the processor is a 6502 or derivative and you can do a ROM dump it may be easy to tell what if any the extra commands are. IIRC most commands are in a single block.

Rick

It sounds a little like the first disk drive we got, but it says
something like "San Jose Special Edition." It is basically an 810 drive
in a metal case with the Archiver chip added.

I'd probably be interested in at least one if the price is right and
he's just going to strip them for parts otherwise.

- Trevor

I'm pretty sure M. Current reads c.s.a.8.
I found a new vendor while searching for a new RF switch for my 800XL.
Those switches are probably available at B&C and/or Best, maybe.
Here's the URL.

Wow - they've got Combat in the box for $7.50! :)

Seriously though, it looks like a good source for parts. Too bad the
board-mounted I/O connectors are out of stock.

- Trevor

Hi alll,

maybe some of you know me and other maybe not ;-)

I want te say Hello.....

from amsterdam, the netherl;ands......

And yes it Sysop Bernard of Becotel BBS.... from years a go ;-)

Yep i'm still a live and kicking ;-)

See you maybe soon.....well how soon i don't know.....

Gtx. Sysop Bernard

I think I have had about 5 computers in the last 4 months. 3/5ths my fault trying to run 10 year old equipment but I don't take credit for having my Thinkpad stolen out of my truck last month or my netbook being tossed off my boat into SF Bay. Back to semi current system with XP but still old enough to have a serial port Dell 600m. Exact same model as bit the dust on me last year so I had to have it cause I have a drawer full of spares like CDROM drives and PS.

Fooling around running Atari800Win Plus 4.0 I check artifacting and I seem to recall I could get this to work in Gr.0 and look just as good as Gr.12. No big thing but gives me an excuse to see how bad the newsgroup tosser will truncate and butcher stuff.

Ha ha ha ha. Alrighty. Gotta delete the auto-wrap of the DATA so
that the numbers come on same line as DATA,
like change:

275 DATA
255,255,255,255,etc

to

275 DATA 255,255,255,etc.
Then translate to ATASCII.

just takes one DELETE and one SPACE on each line where DATA is on a
separate line.

A nice surprise.

Cute.

I tried it in GR.0 with artifacting. Picture is still recognizable
but sort of inversed video.

I'll give it another look on a real Atari. I seem to remember being
able to set color registers such that I got a 4 color artifact mode
similar to Ultima III but brain cells are not quite firing after such
a long layoff. Refesh wasn't active!<grin>

It could have been something else like I modified a GR. 0 display list
to use ANTIC mode 4 and that is where I am getting the mode 0 from.

This was from back in my days before I moved to the internet. On CIS
in the mid 80s I had gotten in debates with people using bitmap modes
over going with Atari's strength of redefined character sets. I made
the statement "pixels and colors in Gr. 15 were identical to GR. 12 "

and Bob Puff chimed in ~You're wrong, you don't know what you are talking about. So I wrote an Action! program to convert GR 15 bitmaps to the fewest possible characters. It would search through the character set to make sure a pattern wasn't already defined before adding it and keep a list of what went where on the screen.

It wasn't really useful other then proving my point. The complexity of the picture was really limited before you have to start using multiple character sets, I barely got Mickey in one set. But resulting picture and screen map only required 1800 bytes for storage w/o compression. Funny thing is if you put the original 7,680 byte bit mapped mode or the 1,800 byte character mode through arc or zip they end up about the same size. I looked briefly at Graphics to Font and the author seems to have defaulted to adding however many character sets it takes. It's probably the right approach.

Russ, I fooled around a little more with uploading. At least for using the google reader it doesn't break lines with no spaces. Something like
10DATA200,232,234,...
appears as one line. I fed a line created like that into Atari BASIC on the emulator and it expanded it just fine. I *know* I am beating a dead horse but every once in a while I think it would be useful to exchange files/programs/binaries in the newsgroup.
I had started doing a conversion of Pools of Radiance graphics to Atari fonts when my laptop got stolen. I was doing Dungeon Master graphics when my previous laptop bit the dust. Everything sucked bananas of course on the 8 bit.I'm trying to find meaning in random events! Like the Gods of the Screaming Electron are trying to give me a message I can't decipher.<grin> Well, once more into the fray. I think the message may be ~start over from scratch instead of hitching my wagon to someone's elses horse.

Rick

Hi everybody!

I was just wondering where would be the best place to upload files that I
would like to share.
I have a few ATR files of programs I made, such as an Atari port of the
Apple II's Lemonade Stand.
There are also some jpeg wallpapers I did of Atari screens, complete with
scanline and phosphor-dot effects.

Stan,
Atari user since 1986

Hi!

You should and could send it to www.atarimania.com and
http://atari.fandal.cz/ and maybe even me : http://pokeysoft.no/games/

Take Atarian care

You could join the Atari Age forums here:
http://www.atariage.com/forums/forum/12-atari-8-bit-computers/
and download your stuff there.

Regards,
RoyE

Minor correction:
Wallpapers are png files, not jpegs.

I also zipped 104 gifs (400x240 each) as an index of the actual wallpapers.
The wallpapers were made from enlarging them 4x5 times:
1600x1200 including Atari border
1280x960 inside border (320x192 Atari pixels)

The Atari community is so small that it doesn't make any sense to target only women (or gays like another poster wanted to do for the Commodore 64).

Seriously, how many active Atari programmers are there left? Maybe 50? That's probably stretching it.

When was the last "major" piece of software released for the Atari? I'm guessing

at LEAST 20 years ago.

Way off - new stuff is released for the 8bit and 16/32 bit machines quite
often.

Perhaps you should actually research before posting (in other words,
engage brain before engaging mouth)? :)

It does, doesn't it? I wouldn't mind picking up a Spectrum if it was
available cheap. Does that mean I shouldn't have been so quick to

observe that the attempt to start an Atari / Spectrum vs Commie
flamewar on Usenet in the 21st century is absurd (though a bit
quaint)?

Yes there are still Atarians out there who still use
their Atari computers. I still have my old Atari 400. It still
works, but I use a 130XE now. Have two of those. All still
work fine like they did when I first bought. Have tons of
games and apps that I enjoy loading. Take your Atari computer
out of the box and step back into time. Haver fun.

Sounds great Bill. Thanks for the info. I will look it up.
Any ideas as to when it will be releasd?

No big thing but I went by Weird Stuff and they had a couple of Atari
items. A 5200, 9 volt transformer, and an 810 drive. Someone emailed
me about a 5200 a while back but I flaked out. Been spending too much
time doing 'interpersonal' stuff to check my email. ;) If you happen
to be traveling through SF Bay area and are looking for those items,
you may want to swing by their store. I don't know if they would sell
them to you off the web page or by phone.

I gotta say the recession has got the blood running in the streets.
They had a row of 2+ gHz Dells for less then $100. Not a lot of
directly Atari related stuff but some close misses. I spotted a Supra
14.4k fax/modem in a cardboard box full of various brands. Everything
was 10% off because they are moving. Such is the Intel side of things,
stuff you went w/o going on vacation to afford like 32 meg dimms<?>
are going for a couple of bucks.

I still have my Commodore 1702 and will probably keep it until the day
I die. The same can't be said for CRT VGA monitors! In 10 years the

only way you will find them will be with a metal detector and a
shovel.

Rick

Hi,

there are still people like Tony Simsig who think that women are too
stupid to program software for computers and to prove him and other
men who think so wrong, I've created the group "ATARI Girls":

http://groups.google.com/group/atari-girls

This is a group where female programmers can show their programs,
tools and games.

Men may also join, but I don't want guys like Mr.Simsig on the group,
since I hate flame-wars.

On the group, girls may show what they're capable of. You can send
your code to atari-girls@googlegroups.com by email. You may also send

executable files and screenshots as email-attachments.

If you need more room, you can use other services for hosting your
data and you can then provide the links.

This is no dating group, so men, please do not approach girls.

And now, have fun,

ATARI Girl

I think of them more as "amuse" than 'Abuse'. They make me laugh.

> Is anyone even looking after Usenet any more?

AFAIK, Usenet never was a moderated system. Had it been moderated,
I doubt all the flaming would have had a chance to even exist.

> Never mind him. I used all sorts of 8-bits. This thread is an

How about we just carry them on and forget about those losers.

> "hey let's educate the brutes, we know we are superior to them

Let them be, as this petty thing they do keeps them busy enough so
they don't indulge in escalated activity such as: rape and murder.

Well, I got mine from an issue of the magazine "Happy Computer", it was named "Turbo-BASIC XL 1.5"
<http://en.wikipedia.org/wiki/Turbo-Basic_XL>. Had to type it in, though. Other good BASIC dialects for the A8 usually came from OSS, but were way too expensive this side of the pond.

If you aim for power, though, nothing except 6502 assembly matches ACTION! <http://en.wikipedia.org/wiki/Action!> - sadly, this language was never ported to any other system (e.g. the C=64 or Apple II).

>But Atari BASIC was matched
> only by Commodore for being bloody useless.

ACK, the Atari BASIC wasn't good at all: slow, having a strange string handling and only few commands for graphics and sound, But what was important for Atari at the time: it only needed an 8K cartridge, and it was finished in time. You have to remember ROM and RAM were very expensive back in 1978 and MS BASIC needed more than 8K ROM on the 6502.

There is only one thing I liked about Atari BASIC, now that I think of it: the ability to use shortcuts (e.g. "G." for "GOTO" and "L." for "LIST").

If they say that, ask them who programmed one of the great games called
River Raid :-) You go girls, anybody can do it, just need effort

Should not be needed really if people were not so set in their ways I
suppose.
 Personally, I've never seen why one would suggest any gender is better than
the other at programming, its just what you are interested in and grasping
concepts after all.

Maybe its just men who like playing with old stuff, or that might be seen

as daft!
Nostalgia ain't what it used to be.

Brian

3D Monster Maze, Mazogs and more recent additions like PipePanic,
Virus, MazezaM, Q-Frogger and the amazing Boulder Logic is all you
need as a gamer, and those are just a few titles, there are many more
to mention for sure!

Regards,

Shaun.

LOL :)

My current HD CRT, and the previous (which broke) were both free hand-me-downs
from friends who upgraded to wall-sized plasma or what-have-you.
One of the TVs I ended up salvaging for Atari Party was a old wood-grain(!)
beast that was hiding in my chiropractor's barn, cover in spiders.

I wish there were an HSC or Weird Stuff closer to where I'm at (Davis). :^/

I'm thinking it'd be nice to have an arcade-style stick for my Atari
systems. (I currently have a few CX40s, a pair of 7800 Pro Controllers
(which really hurt to use!), and a handful of Sega Genesis 3-button gamepads.)

I'm thinking of maybe getting one of these, or some knock-off:

  http://www.amazon.com/6-Button-Arcade-Stick-Sega-Genesis/dp/B00002ST86

Any Atarians out here have any experience, or recommendations?

Well, compared to what I saw on the Apple II (which I basically considered
to be a joke of a system, as a kid ;)) and C=64 (which had no pixel graphics
or sound commands in BASIC).

Eventually, yes, the slowness and lack of a number of useful functions
(more graphics, sprites, etc.) caused me to switch to TurboBASIC XL once
I discovered it. It still lacked sprites, but by then I had some books
that explained how to set them up (via POKEs), and TBXL had some memory
move functions.

> I've used several BASICs, BBC BASIC on the Z88 being a favourite,

Nah nah nah. :)

```
10 GRAPHICS 8
20 SETCOLOR 2,0,0
30 SETCOLOR 1,0,15
40 COLOR 1
50 FOR X=0 TO 359 STEP 3
60 PLOT X,0
70 DRAWTO 359-X,191
80 SOUND 0,X/2,10,8
90 NEXT X
100 SOUND 0,0,0,0
```

C=64 BASIC did not make that kind of functionality accessible, from what
I remember. It all had to be done with POKEs and SYS calls, no?

> There is only one thing I liked about Atari BASIC, now that I think of
> it: the ability to use shortcuts (e.g. "G." for "GOTO" and "L." for "LIST").

It also provided feedback on syntax errors immediately.

```
10250 REM SOME SUBROUTINE THAT RARELY GETS GOSUB'D
10260 PRONT "HELLO"
10270 RETURN
```

would result in an error the moment you entered line 10260.

I remember being uber-frustrated by Apple II's BASIC because
it would only check syntax as the program ran. So if you have
a 1-in-a-million chance of ever landing on a line of code,
you had that much chance of knowing you made a typo. :^(

Also, I seem to recall C=64 BASIC had 2-character limits on
variable names. e.g.

```
10 CARS=10
20 CAT=0
30 PRINT CARS
```

oops :(

Correct. There were many later add-ons to expand BASIC with lots of useful

new keywords, but they never really caught on that much. Commodore themselves distributed Simon's BASIC, which added a lot of much-needed commands: http://en.wikipedia.org/wiki/Simon%27s_BASIC . (A lot of utility cartridges also added commands that were meant more for use in immediate mode than in a BASIC program itself; I had a Final Cartridge III -- http://en.wikipedia.org/wiki/Final_Cartridge -- that was truly spectacular back in its day.)

> Also, I seem to recall C=64 BASIC had 2-character limits on

This was true of many BASICs of the day -- Apple had the same limitation.

True. More functionality came with BASIC 3.5 in the
Commodore Plus/4 and BASIC 7.0 in the Commodore 128.

True, but neither did the stock Atari BASIC. There where BASIC enhancements like Simon's BASIC that added similar commands to C= BASIC. Ofcourse, then there was the problem that your programs would only work for people who had the same enhanced BASIC.

  It all had to be done with POKEs and SYS calls, no?

ML is really the only way to make use of graphics and sound on the old 8 bitters anyway, if you're talking games and programs that required any kind of speed.

I was spoilt in that I had a CoCo2 with Extended Colour BASIC which had a decent BASIC but it was still hampered by it's lack of speed.

CoCo2's Extended Colour BASIC sounds like what I grew up on - TI
Extended BASIC... had an excellent set of statements and commands, but
was pretty slow...
It did not support line-graphics, being that the graphics chip
originally used on the 99/4 had no bitmap mode - the 99/4A added
bitmap. It was a character-based graphics system, even the bitmap
mode...

But the sprite statements and sound statements were most awesome. So
were the user-defined subprograms with local variables. Too bad BASIC
was too slow to do much in...

I started programming on a Timex-Sinclar 1000(that I still have but
doesn't fully work, and then TI99-4a), which I wrote for and had no
way of saving the programs at first but learned a bunch about basic
before I got my Atari 800 with 410 recorder(still have but upgraded to
a 130xe). I still like to play with basic programming on the 130xe
and would like to try and convert some of my Flash games I have made
to the Atari 8 bit machines. Here is a link to some my Flash games on
my Flash gaming site. http://www.thepixelcastle.com/cat/4/Originals/newest=
-1.html
I am sure some I can do easily and some might take little more work,
but the challenge should be fun.

That, right up there, is stock Atari BASIC code. (The kind you'd get
on cartridge for the 400, 800 and 1200XL, or which was built-in on
the alter models: 600XL, 800XL, 65XE, 130XE, XEGS.)

<snip>
> ML is really the only way to make use of graphics and sound on the old 8
> bitters anyway, if you're talking games and programs that required any kind
> of speed.

Yes, truly. On the other hand, as a young kid (I was about 7 or 8 when
I got my Atari 1200XL), BASIC was _incredibly_ accessible as a programming
language, and I have hundreds of 5.25" floppies rotting in my closet with
old games and other programs I wrote for myself in BASIC.

I would have loved to known 6502 assembly, but I never ended up with any
of the books or magazines that explained it. On the other hand, I was able
to take the ML-less BASIC code from computer magazines about the C=64 and
'port' them to the Atari, to play with them. (I learned a little about
AI by programming an inference engine and Dr. Eliza game.) I could also
sit down on a C=64, Apple II, or IBM PC with BASIC and crank out little
programs pretty easily. ;)

As crappy as BASIC is compared to most high level languages, and as slow
as BASIC is on the old 8-bit systems, it really gave me a leg-up into the
programming career that I've had since before I even finished college.

And like I said, TurboBASIC XL was a nice crutch later on. (Ah, finally,
I can easily blit text onto a bitmap screen. ;))

Just a POV but if I imagine a world where there was only one low cost
entry level computer, whatever it was it would have been the greatest
thing since sliced bread. Doesn't matter if it was a Sinclair, Atari,
or Jupiter Ace, I would have still embraced it.

I grew up before the advent of pocket calculators and personal
computers. I still remember using slide rules and log tables when I
was taking tests in college. Even when I started work I thought a
~Wang 700 programable calculator the size of a bread box that anyone
in the building could use was an incredible tool.

Hmmm, next thing you know I'll start talking about how I walked
barefoot in the snow, uphill both ways, to school. :)

Rick

That, plus the BASIC was written in another interpreted language. TI
Extended Basic had some written in assembly, but still a lot was in GPL -
there was a GPL interpreter in ROM.

I had a lot of fun programming, and as long as you were aware of the
constraints you could still produce some interesting stuff.

Unfortunately my programming didn't progress much past my "Shoot the Cabbage Patch Kid" for the CoCo (which I still have a copy of) and a rather excellent Cricket game which was just under 16K which unfortunately has been lost. Both were written in extended BASIC.

I really only started dabbling in ML towards the end before other distractions came along, and then again when I got into Commodore computers a bit later.

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from 1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, the Atari computer intellectual property rights, along with the home market rights to the Atari trademark itself, are owned by Atari Interactive, Inc., a subsidiary of Atari, SA of Lyon, France.

NEWSGROUP BACKGROUND

comp.sys.atari.8bit was created in November 1986 (as part of the Great Renaming) as a direct replacement for: net.micro.atari8

comp.sys.atari.8bit is unmoderated, and has no formal newsgroup charter.

The comp.* hierarchy of Usenet newsgroups is managed by the Big-8 Management Board: http://www.big-8.org/

RELATED USENET NEWSGROUPS

alt.binaries.comp.atari8bit

what a rubbish flame war, dead already...

first lets annoy ATARI and speccy owners: I agree, they are rubbish...
but then they are decades out of date.
and now for the c64 owners: The C64 is also rubbish, really, it's pants.

Now for everyone: The king of home computers is clearly the IBM PC
compatible. Sure it was more expensive back in the day, and only took
hold in the business market at first, but which machine is on
everybody's desk/lap? An IBM PC AT derivative.

:p

What happened was: I was looking for reviews on harmonicas and a web site turned up. I start reading through the reviews and I notice "This

guy's really into Tequila too." Mexico too for that matter. Then I
noticed he is into vintage motorcycles too, mostly British. I am
mostly into Japanese bikes but I did have a 1965 BSA twin for about 15
years. That was enough to cure me => [Japanese, Husqvarna, 1966
Aermacchi/Harley].

I finally looked at the name on the web site and it was The Ian
Chadwick of Mapping the Atari fame.
http://www.ianchadwick.com/index.html
Pretty nice site. I need to work on motorcycles while drinking Tequila
and playing my harmonica.

Was Oregon Trail (famous in elementary school Apple II labs in the 1980s)
ever released for the Atari 8-bit? I've found some public domain 'sports'
(shooting) game with the same title, but it doesn't bear any resemblance to
the game I played on those ugly old Apple IIs.

Thanks to Kevin Savetz (who posted that he has cholera over on Facebook ;))
for reminding me of the game. (Though I also did recently see an article
about the _early_ history of the game... did you know that I did not know
that it was originally a board game? :) Is THAT what kids had to do before
there were Apple IIs infesting their schools? I'm not sure what's worse?
Hey, who threw that tomato? What's those hook for--)

I swear I can sort of remember this as a type in game in some magazine. It
was a text only game, right?

Thanks for the link, I hadn't seen that.

Us old geezers seem to be going through a personal inventory. Trying
to figure out what it has meant.

IBTD. The original IBM PC and its clone army threw back computer development for several years. These ugly, clunky, low-tech machines flooded the market and customers chose them instead of buying better, but "incompatible" systems like those great 68K and ARM based machines from the mid 1980s, e.g. in too many cases (well, the Atari ST had a strong base in the SOHO and music market in Europe and the Commodore Amiga was great for games and video/graphics - e.g. the first seasons' CGI in both Seaquest DSV and Babylon 5 were created using Amigas, but in the end both these systems were washed away by the flood of cheap IBM clones - the only survivor being the overpriced Macintosh).

Due to some good Fortune we have bought out the atari inventory of a game store
in Southern California and we now have several 1200XL's in stock.

I have refurbished Some of them and they are ready to go out the door!!!

All Of them have had the S-Video Upgrade Installed, 800XL OS Installed for Compatibility and Been Fully Tested.

They all come with the standard package that we always have for our systems

1 Refurbished CX40 Joystick
1 Brand New Power Supply
2 games (Pac-Man and one of your choice from the "Extras" List)
All Necessary Video Cables

Come Check them out.

=)

Which is nowadays also a PC clone.

Well, I'm still using my "overpriced" "PC clone", a Mac mini I bought in
'06. Runs as good today as it did back then, and has outlasted many other
computers I've had. Only my Gateway in 2001 lasted 5 years, but it had gone
through several hard drives, several reinstalls of the OS, a processor
upgrade and was way too slow at the end (like having Abe Lincoln's hammer,
having replaced the head twice and the handle 5 times).

So for me, it was worth the $$$.

I'd sure be there again, I had a great time last year, and having
noticed no one brought any 5200 stuff I'd bring along and set up my
5200 collection!

Dan

But I must ask, why would we wait until way out in May? It seemed
really nice to have it in March last year, plus Pin-A-Go-Go is in
Dixon in May, and I'd sure hate to have to choose!

Nah, Oregon Trail, while it did have a lot of text info & screens,
also included a lot of little graphics of wagons, bears,
streams, trees, etc.

Random screenshot via Google:
http://www.elephantjournal.com/wp-content/uploads/2010/09/oregon-trail.jpg

And a random video ("Oregon Trail in 60 seconds") from YouTube:
http://www.youtube.com/watch?v=5GH0-hr1u_k

My long-time Atarian buddy Ben Corr is busy until May, and asked
if I could put off the Atari Party.

My wife also wanted me to avoid too many distractions until
tax season was over. :)

I was asked to avoid conflicting with Pin-A-Go-Go, which is why
I specifically didn't do the weekend of May 14th.

Awesome! I got your email (I think it was you). Definitely come
bring some 5200 stuff! Sign up for the volunteers mailing list,
so you can keep up-to-date on the plans!

This is in BASIC, and I have not tried it, but I did download it.
Give it a try and let me know if it is what you were looking for.

Nope, that's not it. Looks like it was never ported to the Atari 8-bit,
which seems a shame! :^(

  http://en.wikipedia.org/wiki/The_Oregon_Trail_(video_game)

"The Oregon Trail is an educational computer game developed by Don
Rawitsch, Bill Heinemann, and Paul Dillenberger in 1971 and produced
by MECC in 1974. The game was designed to teach school children about
the realities of 19th century pioneer life on the Oregon Trail. ..."

"The Oregon Trail was created in 1971 by three student teachers at
Carleton College in Northfield, Minnesota,[1] using a mainframe
computer. ..."

"In 1978 MECC began encouraging its schools to adopt the Apple II
microcomputer. The first Apple II version of The Oregon Trail was

an Integer BASIC type-in adaptation in Creative Computing's May-June
1978 issue. The program was adapted by John Cook and provided on
A.P.P.L.E.'s PDS Disk series #108. A further version called Oregon
Trail 2 was adapted in June, 1978 by J.P. O'Malley. The game was
further released as part of MECC's Elementary series, on Elementary
Volume 6 in 1980. The game was titled simply Oregon, and featured
minimal graphics. It proved so popular that it was re-released as a
standalone game, with substantially improved graphics, in 1985."

Edition-wise, it lists:

1981 to 1985 The Oregon Trail (Apple II).
1992 The Oregon Trail Deluxe (MS-DOS).
1993-96 The Oregon Trail Ver 1.2 (Windows).
...etc.
The Oregon Trail for Facebook

So it looks like I played the improved-graphics version made
for the Apple II in 1985. (At which point it would've been
brand-new, since I was in 4th & 5th grade that year.)

Time for someone to do an Atari 8-bit conversion! ;)

I forget if I asked this, but I was pondering Driving Controllers
(CX20-01, used with Indy 500 on the Atari 2600) yesterday, since
I found a fun Tempest 2000 clone for Linux (and Windows) called
"Typhoon 2001". I think it'd be cool to hook a Driving Ctrl'r
to Stelladapter. :)

Are there any existing games for the 8-bits?

PS - Kjmann - Tempest Xtreme needs Driving Controller support! ;)

I'm doing my Atari Party in Davis in May. I'll be showcasing
a few games. (How? Could range from 'games that get to go
up on the projector', to 'games that get mentioned specifically
on website or flyers', or 'games whose histories get posted
as educational info shseets').

What titles would be good? I post a list of what I'm thinking of,
but it'd be off the top of my head (since I'm busy),
it'd be be pretty limited (since it'll be from what I own,
or are shareware or public domain), and I don't want to influence
the answers. :)

PS - (Spoiler!) This looks like a good starting point:

Castle Crisis. :-)

Btw, might I suggest Cloak & Dagger for the movie?

Using the Atarimania top 25 titles:

Rescue on Fractalus has an interesting background story as well as being
one of the greatest titles for the system (both technically and in terms
of gameplay). M.U.L.E. (one of the first titles by EA and one of the

greatest games ever on any system) is also worth mentioning, as is Star Raiders as the system selling title esp. for the 400.

Encounter!, Dropzone, Capture the Flag, Mercenary and Schreckenstein are technically advanced and display the hardware capabilities (split screen, scrolling, colour rwegister changes between screen lines) and the fast CPU very well.

Landon Dyer's version of Donkey Kong has a very interesting background story (as well as being the first home version featuring all four screens) - check his blog.

I'd pick a modern homebrew title also (Yoomp! from that Atarimania top 25 list is a great candidate).

Thorsten

I don't think that women are too stupid to program, but I am curious as to how they manage to do it all the way from the kitchen.

Heh, was a routine ever coded / experimented with? I imagine it would've
been more of a timing issue than a space issue.

I'd give up another feature in return for a rotary controller option,
but then I'm probably one of VERY few people who have those kinds of
controllers. :^/

I started watching D.A.R.Y.L. a few nights ago (haven't had time to
finish yet). I was pleased to see a scene featuring the playing of Pole
Position on what looked like maybe an 800XL or 1200XL.

I will have The Completed "Space Harrier" With me by that time, as
well as "Dr.Mario", "Donkey Kong - Arcade", and the New "Pitfall II"
with the new game save to cart system built in.

Also, if it's Ready to be shown, I will have the new "Jungle King -
Arcade" to show off. it's complete with more authentic arcade sounds
and the background music that was missing in the atari "Jungle Hunt".
we have also changed the main character to the Tarzan type guy
complete with the Tarzan Yell. All Just like the Arcade version of
"Jungle King"

Cool, is that game finally finished yet? :) I've played a couple of the
demo releases, and showed them off at the past Atari Parties.

> as well as "Dr.Mario",

I tried this, and it was a fair conversion, but had a few annoyances
that I talked about here a while back. (Esp. the whole-game-freeze that
happened in 2-player mode...)

> "Donkey Kong - Arcade"

What's the story with "Donkey Kong - Arcade?" I have the original
400/800 DK cartridge, and it didn't seem like a very good conversion
(not that I've played others... maybe Colecovision version, decades ago.)

I didn't appreciate the Apple II-like artifacts when objects went
through each other (XOR'ing, I guess?) :)

Question: Why do women live longer than men???

  Answer: Someone has to clean up.

I'm assuming that these Atari Girls will be using XLs... You know, so
that they match the wedding dress, stove, and washing machine.

I don't understand. Most of the XL's that I have seen were black, no?

Bill

Yeah, even I'll admit that that one was a stretch. I was going for the
white part of the XL matching the usual color of the dress and
appliances, but it didn't really work.

So here's something I didn't expect to find on Amazon instead:
http://www.amazon.com/Atari-1010-Program-Recorder/dp/B001VO7WDC .

Cassette lore: I remember one of the criteria for what was a serious
or modern computer was: If it ever had a cassette interface it
couldn't be modern. By that definition the IBM PC which came stock
with a cassette interface was classified as previous generation.

I loved my Atari cassette! My first was one of the GE types but I
picked up a bunch of 1010s after that. I was doing a lot of programing
for other people which meant me doing M/L programs for them to call

from BASIC mostly. I must of stepped on DOS a 1000 times rendering it
incapable of saving my work. Heck, couldn't even load a utility to
step through memory.

Before I got Omnimon and developed better programming practices, like
save before you run or compile, the cassettes saved my bacon dozens of
times. I can remember getting in arguments with ROM vs. loadable
binary for DOS mainly on my experience with how when everything else
went south on an Atari you could always count on the ROM cassette
routines to still be there after an errant pointer.

Just my op but every computer should have a routine in ROM that is
bullet proof. Just something that comes in maybe as an interrupt and
watches for a key combination. It would only need to be big enough to
write out a memory snap shot so you could figure out what happened.

Rick

<http://www.dadhacker.com/blog/?s=donkey+kong>

"Donkey Kong and Me" is the most interesting article.

Thorsten

BTW: Does anyone know whether the Atari software used for the computers
inside the space station in "Enemy Mine" is available anywhere? IIRC
Christoph Schulte-Vennbur wrote at least one of these.

So did you have a copy of DOS.SYS and DUP.SYS on cassette? ;)

> Sent from my computer

No but my crutch was typical of the adding 2+2 in a way to blunder the
answer 5 and putting in a decrement routine i.e. "IF RESULT=3D5 THEN
RESULT=3D=3DRESULT-1" kind of style.<grin>

I used to have a lot of goofy cassette routines for manipulating
dumps. I seem to recall doing stuff like holding down reset and
plugging in an ASM/ED cart to look for what was lost, loading files
from cassette into Speedscript and saving them to disk. Sheesh! Just
so much simpler to save every so often. I don't know what I was
thinking.

We also had IMNSHO a lot of bad advice back then. For instance: Use a
ram disk to save your source code because "Compiles/assembly from ram

disk are lightning fast!" Yeah right, and so were unrecoverable crashes! I do recall figuring that one out the first night I had my Rambo plugged in.

The trial by fire actually helped. It encouraged me to write better code with comments and formatting such that the code could be understood at least by myself. The slow assed Atari I/O taught me to stop assembling after every PLA or DEX so I actually developed a little more complete of a subroutine or function concept before each compile.

Heck, I'm probably too old to program now. Firmly in the [loose shoes, grandchildren] faze. The grandkids would much rather I tickle them then my Atari keyboard.

Rick

I will also admit to this, and even went so far as to keep copies of
them from multiple versions of DOS.

Except for DOS3, which just flat-out blew chunks.

I will have to admit now that I sold out all of my Atari
gear in the late 1980's, and have been trying to recoup
some of it over the past 10 years. I will never be able
to recoup it all as I had over a dozen computer systems
and more than half/dozen video game systems, as well.

Bill

The XL might not match the color of the wedding dress, but it might
match the size. :P

> on cartridge for the 400, 800 and 1200XL, or which was built-in on
> the alter models: 600XL, 800XL, 65XE, 130XE, XEGS.)

BTW, that reminds me, the Atari OS _itself_ included things like
line drawing routines, trigonometric functions, and even an admittedly
odd, kind of hard-to-use flood fill routine.

So really, BASIC just happened to make these routines available using simple
BASIC commands (PLOT, DRAWTO, COS(), SIN(), etc.), but it was, I imagine,
trivial for other languages or straight machine-language games & apps to
utilize them.

Atari BASIC's:

```
10 GRAPHICS 7:COLOR 1:PLOT 0,0:DRAWTO 159,95
```

and Action!'s:

```
Proc Main()
  Graphics(7)
  Color(1)
  Plot(0,0)
  Drawto(159,95)
Return
```

are both just wrappers to the OS routines. Things like the OS's
"S:" (screen), "E:" (editor) and "P:" (printer) device were nice
abstractions.

You can "LIST" your program source in BASIC to the screen, but you
could also do 'LIST "D:SOURCE.LST"' to save the BASIC program as
plain-text (not tokenized, like when you do 'SAVE "D:PROGRAM.BAS"'),
or 'LIST "P:"' to print your BASIC source out to the printer.

Under DOSes, you could, for example, copy "D:MEMO.TXT" to "S:" to view
it on the screen, or to "P:" to get a hard copy. And since additional
devices could be added to the OS ("D:" driver is usually bootloaded off
of a boot disk, though there were cartridges like SpartaDOS, too), 3rd
parties could invent new devices that could be talked to using the
standard I/O functions (e.g., what BASIC provided via wrappers:
"OPEN", "GET", "PUT", "PRINT", "INPUT", "CLOSE", "LOAD", "SAVE",
"ENTER", "LIST", "NOTE", "POINT" and "XIO"). The "R-Time 8" battery-backed-up
realtime clock cartridge was an example... or special printer drivers.

Ugh, I'm reminiscing & bragging too much. :) Basically, Atari's
device abstractions are cool, and it's kind of the same way in Linux
with /dev, /proc, etc. :)

-bill!

Hmmm... I agree, but while a person could convert the graphics and text
with little problem, I would want the mechanics of the game somehow.

Anyone disassemble this game yet? I have heard a lot about it though
never played it.

Well, I would love to see what the "ATARI Girls" come up with.
WARLORDS for the 2600 was written by Carla Meninsky and that is my
favorite game on the 2600. (4 players is just fun and vicious!)

As for major releases lately? I am more of a hardware and telecom guy
myself and happen to like the older games. But of the newer stuff I
think there have been cool developments in term programs, Contiki
(telnet, FTP, etc). The IRC chat program. Various emulators that run
ON the Atari computer (like the Apple 2 emulator!) It seems like every
week on Atariage something new is being released.

Hey, is that actually a BBS with a telephone number? I thought those
were extinct! ;)

I guess I need to update the BBS list again.

Not exactly at least for some of them. It is much more convenient for
everyone involved, and cheaper too, to have the BBS available through
telenet. Steve Tucker has it integrated into APE so your PC does all
the work and the Atari end thinks it is hooked up to a RS232 type
modem. Instead of dialing from the command. If I have it right instead
of
ATDT 555-1212<hit return>
you just
telnet://rdfig.net<hit return>

The experience for me was almost like a time machine. You start
remembering control sequences and posts you made more then two decades

ago. I would still like to see the space shuttle graphic from Itsy
Bitsy taking off one more time.

Rick

PS: A quote from Jeff Bell, Itsy Bitsy SYOP back in the day. Times
have changed.

"I named my BBS 'Itsy Bitsy' because I wanted people to know that it's
not a big system with main frames or 30 MB hard drives. It started as
a one-drive system that was itsy and had lots of bitsies."

There are about 30-40 dialup BBSs in existence.

None are run on Ataris at this time.

However the Prison Board at least has a way to be dialed in and gives a
TELNET out point to the current Atari BBSs out there.

Please help spread the word! The 3rd annual "Atari Party" in Davis, California has been scheduled for Saturday, June 11th, 2011, from 12pm-5pm.

  http://www.newbreedsoftware.com/atariparty/2011/

Join other Atarians and the curious/nostalgic public for a day of video games on a variety of Atari systems: Pong, 2600, 5200, 7800, 400/800/XL/XE, ST/TT, Lynx and Jaguar, plus emulated arcade games on GameBoy Advance & PlayStation2.

We'll also be screening the documentary file "Once Upon Atari" during the event, and the 1984 spy-thriller-with-Atari-game "Cloak & Dagger" at the end of the event.

Finally, there'll be a free prize give-away where you could win anything from Atari-themed t-shirts and playing cards to actual Atari systems!

This event is completely free, and open to the public. (This includesd the movies and prize give-away! Yes: just show up, and you may walk away with an Atari 1200XL or Flashback 2+!)

Davis is located just west of Sacramento, along Interstate 80; about 1hr east of San Francisco.

Are they gonna kick me out if I bring my B83 with me? I've had trouble
with that in Davis before.

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from 1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, the Atari computer intellectual property rights, along with the home market rights to the Atari trademark itself, are owned by Atari Interactive, Inc., a subsidiary of Atari, SA of Lyon, France.

NEWSGROUP BACKGROUND

comp.sys.atari.8bit was created in November 1986 (as part of the Great Renaming) as a direct replacement for: net.micro.atari8

comp.sys.atari.8bit is unmoderated, and has no formal newsgroup charter.

The comp.* hierarchy of Usenet newsgroups is managed by the Big-8 Management Board: http://www.big-8.org/

RELATED USENET NEWSGROUPS

Is the Delta Drawing manual online anywhere? I seem to have misplaced mine.
(MIGHT be buried in a box, but might be lost forever :^/)

Part of the reason is because over a year ago I started work on a
modern clone of the program, and want to make sure I'm not missing any
obivous features or UI concerns...

Cheers to that!! :)   What was it to you that made the keyboard the
best overall?

For the Atari 800 keyboard I think it was the response to the typing.
Not only the key click sound, but the physical response to the typing as
well. Granted, I have the type of keyboard on the 800 that when I type
at 60+ WPM an occasional key wants to go flying.

Also I think my 800 keyboard used to be more responsive, though these
days some keys take more work than others. :)

Sure that's not just you Doc? We're not getting any younger ya know...I've
noticed the same thing with my Mega ST's keyboard! :)

If I have it right all 800 keyboards actually had metal contacts. When
you pushed a key in the plastic piece holding them apart would get out
of the way, allowing contact. Really nice IMHO too. No clicks but
reliable and ~3/4 of what is considered a full movement keyboard.

1200XL was also 3/4 movement but the first to use goofy contact mylar
sheets. Damn fine keyboard with springs and good wrist angle so not a
lot of carpel tunnel syndrome.

800XL reputed to have been made by 3 manufacturers, all of them bad.
The contacts don't seem as bad when it comes to corrosion compared to
the 1200XL but still less then perfect. It's only a 1/2 stroke
keyboard which is OK but I'm a bit old school.

XE series, rubber pads that made contact and acted as a spring. I
didn't like my ST keyboard with the same feel. They are OK compared to
the junk coming out for the PC of late.

My favorite keyboard of all time would be the IBM PC AT, I finally ran
out of them though. Click, springs, and full stroke. I preferred it to
even the defacto standards like IBM Selectic typewriter. I still have
all kinds of dongles so I could plug them into PS3 type din
connectors.

Rick

Rick sums up why the 1200XL keyboard is good, in far more technical
detail than I ever could.

Though I do also remember laughing at a Computer Chronicle episode where
Apple or someone was showing off these fancy 'new' "wrist-rests" below
the keyboard.

I stared at my TV, then looked down at my 1200XL, and was like: "so? I've
had that for years!"

And yeah, my laptop PC is not only very flat, very soft, very typo-prone keys,
but it's at a completely flat angle.

PC AT keyboard was good too, but waaay too noisy. ;)

Amen, Rick! I've got 2, one on my son's comp, and one on mine, with a
couple of "spares". SysAdmin at a local library helped me stock up a bit
on spares for them, so we're good for awhile yet.. Love going
clackety-clack, and really dread the day I'm forced to use a "modern"
keyboard.

These keyboards are so good (and heavy, tank-like even) that they make me
want to open up a Konsole on my Linux box and go command line. :)

I see HxC floppy drive works with Atari ST, Amiga, PC, etc... I am
wondering if the drive works with Atari 8bit, Atari XF551 has the 3.5
PC drive with Bob Woolley's ROM. Does it work ?

After a 15 year layoff I finally burned an EPROM again. It's been trying, had 30 gigs of development software including stuff for my Needham when it crashed and burned.

Bought one of those cheapo USB programmers off FleaBay. Turns out my UV erasure still works but only had two EPROMs left after the deluge. One programmed fine, the other gets about 1/4 way through and bails out. First thing I programmed was ED/ASM revision B<I think>. Back when San Jose Computers was still in business they had ED/ASM revision B carts for $20 and populated board revision A carts for $5. You can guess the way I went. Long time to upgrade.

I know, I should be using flash rams. I will switch. I have been fooling with GAL chips too. I think the older I get the dumber I get because I a really having trouble wading in. Took several hour just to get an example compiled, then I had trouble with the simulator! I know I'm the problem, not the software.

I have to make sure that 5200 is running. Seems like it would be a good platform to make a one off 8 bit with 32k of cart space.

Rick

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from 1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, the Atari computer intellectual property rights, along with the home market rights to the Atari trademark itself, are owned by Atari Interactive, Inc., a subsidiary of Atari, SA of Lyon, France.

Blog posts about this are apparently popping up all over the place,
despite the fact that this was release a while ago, and is discontinued,
and the company selling it (geekstuff4u) is out of stock.

http://www.geekstuff4u.com/computers/peripherals/keyboard-mouse/niyari-vintage-
keyboard.html

I still want a USB 1200XL keyboard, anyway. :^P

That is an amazing item. How strange it is to see an influence from
your past reinterpreted from retro from a different culture's
implementation that you never really knew of.

I've been doing a lot of retro the last 2 months. Only about a third
of it is Atari because I have been jerking around with things like
Warcraft Orcs vs. Humans. I saw one of those WinCE laptops at
Walgreens for $99 and managed to escape w/o buying it. The CE emulator
sucks.

I saw they had a Sega Genesis emulator for $20 too. Motion sensing
joysticks and SD card interface. Things are looking up, IIRC the Sega
was just a bit stronger then an ST with respect to colors and built in
graphics chip. I tired of writing software for my hand held NES
emulator after getting a simple cart image to run. I wish the market
would settle down to a single platform so people could get busy with
it.

I was looking at 'modern' storage solutions for the 8 bit and while
they are functional I think they may have missed a certain market
segment i.e. Cheap like me! No way I am going to spend a hundred bucks
for a hardware solution that doesn't do much beyond what you get with
SIO2PC.

 What should'a had'a happened is instead of using PORT B bits for bank
switching someone should have built a bit banging SD card interface. I
think the only thing you would need is a 3.3V regulator and an SD
socket. It would be slow, probably no faster then a real disk drive,
but being flash it would be just as secure. For that matter you could
hang one on a joystick port.

Rick

Sold as a single lot on the dominant auction website, you might get
$90 for it. A little more depending on cosmetics and how much RAM is
in the 800.

Piece it out and list it one-by-one you'd get somewhat more I think,
but it'll be more work to do the individual photos and listings.

There's a sales website ecrater DOT com that I sort of like. You can
list the stuff there and let it sit until it sells. But it'll take
longer, maybe a lot longer. Some of it'll sit there indefinitely
because ecrater doesn't bring the buyers like the other site does.

What's the warning regarding the 410?

We were discussing the colored-brick-busting-w.-pong-paddle Breakout games on an IRC channel yesterday.

I am of the opinion that more angles should be available. When your paddle can only rebound the ball at four angles I think it diminishes the play value. You can also find yourself unable to hit the brick you want. I would like to see Breakout with six rebound angles, and maybe a straight-vertical as well, which would be seven angles.

I don't think I've ever owned Super Breakout for the 8bit. I watched some videos of it, and it looks just okay. It looks kind of uninspired with the blocky text, but it does get the colored separated bricks right. The playfield takes up about 3/5 of the screen. It's not as large as it could be. I'd like to see the full-screen used. I think a game can have its dimensions adjusted for the screen it's on, and still be true to the arcade. Does anyone know if Super Breakout for the 8bit has additional-balls-in-cavities and advancing-walls modes?

I recall the standard Breakout and the later Super Breakout for the Atari 2600. The standard one had good play value like most of the early 2600 games. Sears called it "Breakaway IV." It didn't have the cavities or advancing walls features. It had artificial characteristic of the sixth rebound sending off the ball at a sharp angle no matter how you hit it. It used almost the entire screen, which is a good thing in my opinion. Now Super Breakout for the 2600 was a stylish affair. It looked and sounded good, and had the advancing walls and IIRC the cavities. The sounds were chime-like, metallic yet melodic. However there were only the four angles. It did not have separated bricks, i.e. it displayed the walls as ribbons until you started picking off bricks. It's not quite like the arcade, the colors are also different, but nevertheless it is a memorable and very good Breakout variant.

The 5200 version, based on a video I watched, has the cavities and looks slightly better than the 8bit version. It has an unnecessary "dissolve" effect for each busted brick. The 5200 version is utterly impaired though, because it must be played with the joystick (or possibly the trackball, the video said). Breakout in my opinion must be played with a paddle controller.

There was also Arkanoid for the XL/XE. That's sort of a Breakout-like game with power-ups and much more advanced graphics. It adds so much stuff and is different enough in style that I do not consider it a Breakout game in the sense of the ones I discussed above. However it is good and quite advanced in its own right.

What then would the ideal Super Breakout be? In my opinion, it would
take up the entire screen, have options for advancing walls and
additional balls in cavities, have the authentic arcade color schemes
and separated bricks, and last but not least have more rebound angles
for depth of gameplay. I would also not object to an option for the
charming chimes sounds of 2600 Super Breakout.

The person did not know if the 410 works, so then would be worthless I
guess

Speaking of keyboards, I have an Atari 400 I would love to upgrade the keyboard.
Was there a replacement keyboard available way back when or do you just retrofit a
certain type of keyboard to them?

Thanks

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from 1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, the Atari computer intellectual property rights, along with the home market rights to the Atari trademark itself, are owned by

Atari Interactive, Inc., a subsidiary of Atari, SA of Lyon, France.

I bought my wife a copy of "Art Academy" for her Nintendo DS (which
has a stylus-based non-pressure-sensitive touch screen), and am
intrigued by how well things can come out with, basically, the same
input as we have on the Atari with a Touch Tablet or Koala Pad (the
only difference being the buttons needed to tell a program when you
really want to paint, vs. when you are simply positioning the cursor)
or Light Pen.

See: http://artacademy.nintendo.com/

which has a video, and:

http://artacademy.nintendo.com/gallery/

which is a gallery of some example art.

The things it really seems to need to do something like this is:

1. Blending of previous pixels with pixels from the new stroke
2. Randomized (or faux-randomized, via a set of 'frames' that
   are cycled through) pixelization of the brush area
3. Fade-out of brushes
4. Angled brushes; i.e., if you stroke left to right, the
   pixels come out like this: ||||| If you stroke up to down, like
   this: =
         =
         =

#1 could be ignored due to the pixelization from #2 and #3,
though the results would simply look like a really carefully
drawn bitmap in, say, 4 colors. Yuck. :)

#2 and #3 could be handled with a set of pre-rendered
brush shapes at varying degrees of solidness. i.e., for
a fade-out effect as you paint, it would go from a shape like:

```
  ####          ##          #
 ######   to: # #### to: # # # to:   #
 ######         ##         #         #
  ####          # #          #
```

And for randomization, simply have a handful of these
fade-out sequences that you cycle or randomly-pick from.

For #4, that's trickier, I think. It might be possible
to have a set of, say, 180 bitmap masks, one for each
angle you'd have to draw at:

If we only cared about 4 angles (0, 45, 90, 135), they'd
be something like:

```
 -----  ---## --#--  ##---
 ######  --##- --#--  -##--
 ######  -##-- --#--  --##-
 -----  ##--- --#--  ---##
```

Really, you only need 1/2 as many masks as angles you
want to support, since you can re-use the ones for
<90 degrees, flipped over, for >90 degrees.

Getting back to #1, I had an idea for a VBI-driven

graphics mode that doesn't do any DLI tricks; it
simply takes 2x memory and 2x time to produce an
image. You could have Red, Green, Blue and Black.

When you draw some red across the screen, it would
draw on both frames, but the randomization and
fade-out effects would cause them to hit different
spots in each frame. [*] It'd be solid red,
interspersed with dark red (red+black VBI flipped)
and black.

```
  -RRRRRRrRrrRRr-r--r-r-----------
  RRRRRRRRRrRrRrRr-r-r--rr---r----
  RRRRRRRRRRrrRrrRr-r---r--rr-r---
  RRRRRRRRRrR-RRrr-rr-r--rr-r-----
  -RRRRRRrrRrRrrR--r--rr-r--r-----
```

And imagine the same when you paint other colors
on top of each other (e.g., blue over red;
you'll get some red pixels next to blue, as
well as some VBI-driven purple pixels).

I'm kind of tempted to whip up a little
libSDL-based app on my Linux laptop to demonstrate
how this would work & what it would look like
(including flicker). :)

Ever since long, long, long, long ago... back when
I first learned about APAC and ColorView modes,
I thought it would be really handy to have a program
(e.g., on a fast, modern computer) which would
create an interlaced bitmap image (like an APAC or
ColorView mode), but which also includes palette
information.

In other words, every vertical row of pixels
(scanline), determine the best palette to use,
rather than _always_ using red/green/blue.

Imagine 160x192 APAC mode where, instead of
64 colors total, you have the potential for
64 colors _per scanline_.

Take this photo, for example:

http://upload.wikimedia.org/wikipedia/commons/a/a6/Knysnasunset.jpg
(thumbnail here: http://en.wikipedia.org/wiki/File:Knysnasunset.jpg)

It goes from dark blues into some blues & purples,
then to golds and browns, then golds, browse and blacks,
etc., as you go down the picture.

The Atari has 128 (or 256 if in GTIA modes) native colors to choose
from, so it seems reasonable to be able to use more than just 7 of
them (red, dark red, blue, dark blue, green, dark green, black) to
make a nice picture, no? :)

This could also lead to a hybrid mode, somewhat like the mode
I mentioned in my "Painting ideas" post from a moment ago,
where you could use a pair of 160x192 screens (rather than three
of them), with per-scanline palette choices blended together.
That'd allow for 16 perceived colors per scanline, which is
still a hell of a lot better than 4... and it'd be less flickery
than a Colorview(-style) mode.

My problem is: I'm not that good with the analysis stuff.
It might be possible to cobble together output from tools
like NetPBM or ImageMagick to construct a pair or trio of
images, and colors.

The hard part is insisting that it quantize down to 16 or 64
of the 16,000+ _possible_ colors. Emphasis on "possible."

So who's up to it? :)

Well, it's been done. Not too surprising. :)
Thanks to Bobby Clark for pointing it out.

See "XL Paint Max", here:

  http://madteam.atari8.info/index.php?prod=uzytki

It seems to come in two flavors... 6502 & 65816!

It giving you 16 colors to choose from.
The default colors it comes up with are:

  * Black
  * Dark Grey
  * Medium Grey
  * Light Grey

and:

  * Black
  * Red
  * Green
  * Blue

MAD TEAM also created a Win32 app called
"Atari Interlace Studio" for manipulating
bitmaps and converting them into the interlaced
mode for the Atari.

So I inherited a modern CRT-based HDTV a while back; a Philips 27PT832025
(man, that's a mouthful).

It has some features which make older game systems & computers look
worse that they would on an olderr TV or, e.g. Commodore monitor.
One day, I'll need or want to replace this TV and I'd like to get
something that can do a reasonable job with things like:

  * Atari 7800 via RF
  * Atari XL via composite (I should do S-video some day)
  * Atari Jaguar (via S-video)
  * Sega Genesis (via S-video, IIRC)
  * Nintendo (NES) via composite

Particularly annoying are artifacts (usually stripes of horizontal lines)
when things flicker. e.g., some of the higher-color or -resolution
software-driven modes on the XL, or player/missile (sprite) re-use in
2600 games (e.g., Asteroids).

Another thing I've noticed reminds me of a scaling feature I've seen
used in emulators to provide a smoothed, cartoon-like effect when the
emulator window is enlarged beyond the emulated system's natural
resolution; as opposed to simply throwing up big blocky square pixels.
It seems to detect when there's stair stepping (e.g. in a / shaped sprite)
and adds in-between pixels. Sometimes... not very weel, and not very
appropriately. :-(

I downloaded the manual for the TV (*) and it lists some features which
I think are to blame:

  * ActiveControl TM - auto-corrects picture (sharpness, etc.)
  * Eye Fidelity (aka Digital Options) - for Progress Scan vs Interlaced

Switching around various options, I've never been able to get my older
systems to look very good. The Jaguar, mostly doing VLM these days,
certainly looks a lot nicer since I bought an S-video cable. Mostly
it's the older Ataris that have trouble.

Fortunately, it seems to be okay accepting the PAL output of my 800XL
(just swapped ANTIC chips), which is nice. Other TVs haven't done that;
mormally what I'd use was the C= monitor, and fiddle with its V-Hold knob.

So, to the other gamers & Atarians out there... what kind of TV 'features'
should be avoided? Our next TV will probably be a non-CRT flatscreen
HDTV who-haw, since they're finally coming down in price.
Any recommendations? I wonder how a Fry's or BestBuy would deal with me
brining a 7800 and/or 800XL into their store... ;)

(*) A Google search lead me to numerous sites that'd sell me a PDF of
the manual for ~$10. Simply going to Philips' website & entering the TV's
model in their search brought up the manual at no cost. I feel sorry for
the naiive web users. :-/

Thanks For the Compliment Tin. =)
I worked on That Website For Quite a while till I got it the way I wanted
it.

I'll Take Some Photos of the Store When I get My New Battery for My Camera.

=)
Sal (Kjmann)

Trying not to sound like a overly-enthused fanboy, but that's a great
selection of new carts and a very cool Atariesque website (love the
tunes). As well, says the website, that you have a "store" that is
open weekends!

It's unlikely I'll get to Oregon soon, but if I get anywhere near, I'd

have to check that out! Can you perhaps post some photos of the interior?

Do all your carts have nice labels? Sinistar, Space Dungeon, Star Island?! Man, I had forgotten the early vectrex Star Island stand-up arcade machine, it's definitely cool to see an 8bit cart of it! The Ultima series (you're not the first to offer IV though).

Praise aside, I must say that I think you should include a statement that you're willing to take down any ancient software entry on notification by the author that's its unwelcome. I hope that in the case of Yoomp and ones like that that you're sending a royalty, however infinitesimal, to the authors.

Bill, Send Me An Email (kjmann_atari@yahoo.com) and I Will Ship you one of my S-Video Kits For the Atari 8-Bit.

=)
Sal (kjmann)

"Bill Kendrick" wrote in message
news:4d21487a$0$44039$742ec2ed@news.sonic.net...

So I inherited a modern CRT-based HDTV a while back; a Philips 27PT832025 (man, that's a mouthful).

It has some features which make older game systems & computers look worse that they would on an olderr TV or, e.g. Commodore monitor. One day, I'll need or want to replace this TV and I'd like to get something that can do a reasonable job with things like:

  * Atari 7800 via RF
  * Atari XL via composite (I should do S-video some day)
  * Atari Jaguar (via S-video)
  * Sega Genesis (via S-video, IIRC)
  * Nintendo (NES) via composite

Particularly annoying are artifacts (usually stripes of horizontal lines) when things flicker. e.g., some of the higher-color or -resolution software-driven modes on the XL, or player/missile (sprite) re-use in 2600 games (e.g., Asteroids).

Another thing I've noticed reminds me of a scaling feature I've seen used in emulators to provide a smoothed, cartoon-like effect when the emulator window is enlarged beyond the emulated system's natural resolution; as opposed to simply throwing up big blocky square pixels. It seems to detect when there's stair stepping (e.g. in a / shaped sprite) and adds in-between pixels. Sometimes... not very weel, and not very appropriately. :-(

I downloaded the manual for the TV (*) and it lists some features which I think are to blame:

  * ActiveControl TM - auto-corrects picture (sharpness, etc.)
  * Eye Fidelity (aka Digital Options) - for Progress Scan vs Interlaced

Switching around various options, I've never been able to get my older systems to look very good. The Jaguar, mostly doing VLM these days, certainly looks a lot nicer since I bought an S-video cable. Mostly it's the older Ataris that have trouble.

Fortunately, it seems to be okay accepting the PAL output of my 800XL (just swapped ANTIC chips), which is nice. Other TVs haven't done that; mormally what I'd use was the C= monitor, and fiddle with its V-Hold knob.

So, to the other gamers & Atarians out there... what kind of TV 'features'
should be avoided? Our next TV will probably be a non-CRT flatscreen
HDTV who-haw, since they're finally coming down in price.
Any recommendations? I wonder how a Fry's or BestBuy would deal with me
brining a 7800 and/or 800XL into their store... ;)

(*) A Google search lead me to numerous sites that'd sell me a PDF of
the manual for ~$10. Simply going to Philips' website & entering the TV's
model in their search brought up the manual at no cost. I feel sorry for
the naiive web users. :-/

Honestly I think you came up with the killer app for an Atari in the new milenium: Let <10 year olds play Pong and Pac Man. I've been breaking in my grandkids and they love the old games. Makes sense that a 4 year old would prefer Pac Man over Halo or WoW.

Something that will never get off the ground but I have been thinking on video hardware hack. Your probably familiar with some of the video hack$$$ but I was thinking about something Cortese'esk. There's a ~20=A2 IC, 74LS166<?>, that loads an 8 bit byte and clocks it out serially. They were used in everything from Timex to Jupiter to IBM PC computers to output video. Bob Wooley used them in at least one of his video designs too, his 6545 80 column hack IIRC.

What I was thinking is there are at least two ways to 'cheap load' the

chip with data. You could use the address line toggle like the OSS carts or use decoding like the bank switched carts. The thing to do instead of activating the toggle with the 6502 you make it active when the ANTIC is in control. The '166 would need its own RAM, something like a 8 bit by 8k would be plenty. All you would have to do is have the ANTIC address lines drive both the existing memory and the 8kx8 chip. This would make 16k available w/o any flicker so you could do 320X4 shades or 160X16 shades. It could be done for less then $10 but the standard 'it will cost and arm and a leg if custom boards need to be made' applies.

Rick

...the same as in the last decades: gaming! :) Star Raiders & Blue Max
are still my favorite games. Uh, and pimping the old hardware is very
funny. We now have capabilities we're dreaming of back in the 80s *sigh*

About six years ago I after having discovered A8 emulators I stumbled
my way in here just as you are now.

I found enjoyment from all kinds of new software and hardware and I
rediscovered my old favorites.

The first thing of note would be an SIO2PC cable. With this and a
disk emulator which will run on just about any contemporary computer I
was freed from the A8 floppy disk!

later on I learned that many mass storage devices have appeared since
the days of MIO and Blackbox. Actually both of those arrived after my
prime Atari days. If you are handy with a soldering iron these are
some of the newer options. IDEa and MyIDE IDE hard disk interface.
These connect to the bus but only IDEa is a proper PBI device. Both
work great with CompactFlash adapters. On the SIO bus we have SIO2IDE,
SIO2SD, SDrive. SIO2IDE and SDI2SD are exactly what their names
imply. SDrive is also an SD interface for SIO.   I have a MyIDE kit
and SDrive kit and an SDrive I built from scratch (ok that's a
barebones adaptation which I built for less than $10). I love them
all

Here's a partial list of great software that has appeared or has been
revised since my return to this wonderful hobby.

Games

- Jelly Beans
- Flowers Mania
- Yoomp!
- Tempest Xtreem
- Xenophobe (complete prototype)
- Super Pacman (completed/fixed by author)
- Crownland (PAL only)

- His Dark Majesty (RPG/strategy)
- varioos ports from other platforms
- fantastic works in progress
- hundreds of new, previously unreleased, or rediscovered lost games

Utilities

- SpartaDOS X revisions
- Real.DOS
- FC (recursive file copier)
- high speed SIO driver (up to 6X)
- A8 cross assemblers and compilers for Windows and Linux
- The Last Word (new word processor)
- alternate ROM OSes
- contiki (OS)

Here's some more of the new hardware available.

- VBXE(advanced graphics enhancer)
- user programmable multicarts (Atarimax flashcart is the grandfather
of these and still one of the best)
- RAM upgrades (classic DRAM, static RAM, SIMM mods, more)
- Turbo Freezer 2005 (save states, emulate carts, more)
- stereo sound
- video enhancements and adapters
- USB cartridge (connect some USB game controllers)
- SIO2USB (connect USB thumb drive)
- ethernet cartridge (work in progress. works with contiki?)
- 32-in-1 OS (also DIY multi-OSes)
- XL7 accelerator (work in progress?)

Most of the hardware is DIY. Some can be purchased. There are also
people who build and install the upgrades for modest fees.

I'm sure I left out a lot.

-Steve Sheppard

Mostly gaming. Not much time for else. Last year and the year before
(and hopefully this year, too) I've done an Atari party out here in
Davis, Calif:

  http://www.newbreedsoftware.com/atariparty/

:)

> What's everybody doing with their 8bit these days?

I am waiting for my VBXE 2 board :-) Can't wait to test this beauty. And
Star Raiders, Rescue on Fractalus, Ballblazer, Bounty Bob, M.U.L.E. are
still among the best games ever.

Long live Atari

Take Atarian care

Two?!?! When I called up the headers, I counted *five* groups (all
comp.sys.*) in the header...

>Personally, every 8-bit machine has his strongness and weaknesses, and I

It's simple really; the best 8-bit machine is -- whichever one you
happened to own. :-)

UPDATES SINCE PREVIOUS POSTING:
2011.01.06 added: Oliver Schmidt (Contiki 2.x port for Atari)
2011.01.06 added: Mark Dusko

(Atari 8-Bit Ethernet Project, Simple Atari Telnet)
2011.01.06 Jan Johnsen: Dracula Lives (1.65 final)
2011.01.06 Kendallsoft: Gorilla Warfare (2009), Gwobby Strikes Back (2010)
2010.12.28 added: Diggerbonk
2010.12.28 added: Igor's Software Labs
2010.12.22 added: Llamasoft
2010.12.18 added: ArSoft
2010.12.18 added: Akop Karapetyan (Atari800 PSP v2.1.0.1)
2010.12.18 updated: Atari800 Development Team
2010.12.18 Ludovic Jacomme: PSPAtari v1.1.3, Wiz-ATARI v1.1.2,
GP2X-Atari v.1.1.0, Dingux-Atari v1.1.0, Pandora-Atari v1.1.0
2010.12.15 HiassofT: 512k SRAM extension for Atari XL/XE V1.3 (2010-12-14)
2010.11.28 Jonathan Halliday: The Last Word 3.21
2010.11.26 HiassofT:
Highspeed SIO patch for XL/XE OS and MyIDE OS V1.30 (2010-11-25)
2010.11.26 HiassofT: MyPicoDos V4.05 (2010-11-25)
2010.11.11 added: Christian Krueger (CMI08 PS/2 Mouse Interface)
2010.11.10 IK+ C64 to Atari 8-bit Conversion Project: IK+ Build 0284

Subject: Introduction

Conventions

All commercial vendors, developers, publishers, and repair shops should be listed here. "Active" PD/freeware/shareware developers should also be listed. Persons or entities holding rights to products, but not selling or supporting them in any way, should NOT be listed here.

"Vendor" = Reseller of products produced by others. Types of products sold are given in categories: new hardware, used hardware, PD/freeware/shareware, (new) commercial software, used (commercial) software.

"Developer" = Producer of products. Titles of products produced by the developer are listed. No prices are given.

"Publisher" = Publishes a print or disk magazine, or a book. Complete subscription or ordering information should be given, including prices. Authorized online publishers of originally print or disk magazines are also listed. Online books are not listed.

"Repair Shop" = Can repair 8-bit Atari or related hardware devices. Be sure to make advance contact before sending anything to work on!

Entries are presented alphabetically by company name, or publication title. If no company name exists, a personal name is used. "See" references indicate complete information may be found under the given heading. "See also" references indicate closely-related information may be found under the given heading.

The month/year that vendor information was most recently fully verified is given at the "upper-right" of each entry.

Every entry should contain a valid postal address or web page address.

Entries do not include an email address due to the overwhelming amount of spam that would result.

Internation Reply Coupons

The following is from: (2010.09.12)
http://www.upu.int/en/activities/international-reply-coupons/about-irc.html

About International Reply Coupons

When one writes to a stranger and requests a reply, it is considered polite to enclose a self-addressed stamped envelope. This works well when both persons live in the same country; however, if they are from different countries, the enclosed postage stamp will not be valid.

All member countries

This technical problem was solved in 1906 when the Universal Postal Union, during its Congress in Rome, introduced the International Reply Coupon service. As the service began before the days of airmail, the earliest coupons could only be redeemed for a single-rate ordinary postage stamp to a foreign country. In terms of today's UPU Convention, International reply coupons (IRC) are exchangeable in all member countries for the minimum postage of a priority item or an unregistered airmail letter sent to a foreign country.

Mandatory to exchange

The UPU's International Bureau processes several million coupons each year and deals with of all accounting aspects. The International Bureau does not sell IRCs directly to customers; they must buy them from their local post office. Although Posts are not obliged to sell IRCs, it is mandatory for Posts to exchange the coupons. If a Post does not sell IRCs, it is possible to purchase them in a post office located in a neighbouring country.

DISCLAIMER

Appearance in this list does not constitute a recommendation or endorsement of the business, individual, product, or service listed.

Verfications -> YOU!

This list is in a constant state of development, and comes with no guarantees. Information of this nature constantly ages; therefore, the information contained in this list is constantly updated. Please use the latest release of this list whenever possible!

Remember, the success of this list is dependent on YOU, the reader, to send me updates that correct errors that you find. If you use this list, please do your part in keeping it useful for everyone!

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from 1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, the Atari computer intellectual property rights, along with the home market rights to the Atari trademark itself, are owned by Atari Interactive, Inc., a subsidiary of Atari, SA of Lyon, France.

NEWSGROUP BACKGROUND

comp.sys.atari.8bit was created in November 1986 (as part of the Great Renaming) as a direct replacement for: net.micro.atari8

comp.sys.atari.8bit is unmoderated, and has no formal newsgroup charter.

The comp.* hierarchy of Usenet newsgroups is managed by the Big-8 Management Board: http://www.big-8.org/

RELATED USENET NEWSGROUPS

alt.binaries.comp.atari8bit
Programs for Atari's 6502-based orphans.

comp.sys.atari.advocacy
Attacking and defending Atari computers.

comp.sys.atari.announce

Don't have links handy, but search for "Project-M" by NRV. It's a game
engine utilizing artwork from Wolf3D (from MSDOS, and the frst 3D FPS
(first-person shooter) by id Software, who made Doom & Quake) & even remade
music.

It uses APAC mode (narrow mode, so 64x(something)x256 colors) and runs at
a good framerate (15-22fps on my NTSC 800XL that happens to have a PAL
ANTIC inside). Controlled by joystick, or keyboard; includes strafing. ;)
Nothing to shoot at yet, but some invisible (til you grab them) keys
let you open doors & explore more rooms. (Look for hidden doors, too,
just like Wolf3D ;))

Vids on YouTube, files at AtariAge. Enjoy!

Version 2.0 and it looks damn amazing if this is non-modded (no VBXE) ...
They should make an RPG with this. In awe :-)

Take Atarian care

I wish SSI would have ported the Pools of Radiance series to the
Atari. The first installment<s> were written in Pascal and you could
play the game off a single 1.4 meg floppy. IIRC that 1.4 meg floppy
was a full install with both CGA and EGA graphics and sound files. IMO
could have easily been done on an Atari in a tighter language or ML on
a couple of disks. The C64 got it anyway and game play was essentially
identical to the IBM.

Probably only me but ST/EGA level graphics i.e. 320X200 in 16 colors &
640X200 in 4 colors would have held my Atari interest better. Not that
many people seem to be into old ST or EGA games at the momment but I
still boot them up from time to time..

Rick

I'll take anything on my old 8bit. :)

I have to disagree here - from my perspective, there are a lot of people
who are "into" old ST games. :)

I'm hoping to do Atari Party 2011 some weekend in May, out here in
Davis, California. (About 1-2hr east of points in the greater SF Bay Area,
and about 20 mins west of the I-80/I-5/99 interchange in Sacramento.)

I'm planning on using the same venue we had in 2009, a large meeting room
at the local public library. We were unable to use it last year, and had

to pay $$$ to rent space from the City, due to rennovations that were
taking place. Now, the room we'd be using is larger, has a built-in
ceiling-mounted video projector, and has a small conference room in the
back. This opens up some fun possibilities.

Last year, we rented and screened the original "Tron" (thanks also to
some cash donations), and we may screen it, or some other movie, again.

For more on 2009 & 2010 parties, see:

  http://www.newbreedsoftware.com/atariparty/2009/

Ok, guess I should post here ...

I used to tinker around with the lovely Atari 130XE back in the day,
even wrote a few BASIC games, one of them is called Sky Scraper, a 40
level platformer which I think you can download from the

Atarionline.pl site ...

In 2009 I discovered Atari 8 bit emulation and have gotten back into it ... and what else have I done? Umm, discovered 18 new Graphics modes for the old Atari ... all of these inspired by that Super IRG mode that Bill Kendrick used in his Gem Drop game ... I took that idea, expanded it, and we now have an APAC text mode (Graphics 0 but with APAC characters), a HIP text mode, and a couple of CIN text modes which will let you display ANITC 4 characters in as many as 80 colors.

Also writing a font editor which will edit in Super IRG and these other 18 modes. I've actually got a few Beta versions ready but they probably still have a few landmines in them.

This is what happens when you have a lot of free time on your hands. :)

I don't understand why people are still using crappy doorstoppers like the Sinclair Spectrum and ugly black and white heaps of trash like the ATARI 800 XL.

Both of these computers failed in the 80s and look at the graphics of the Spectrum - ugly, monochrome, no scrolling and no sprites.

The ATARI has only 3 ugly colors, ugly sprites and bad scrolling. 99% of ATARI games are crap.

All the games are MUCH superior on the C64 and the C64 truly is the king of home computers!

So please throw away your ATARIs and Spectrums and buy a C64 on ebay!

Very poor, 1/10.
Hints on improving your trollery...
1: restrict your trolling to a single computer and group. Including both
atari and sinclair in a single post just smacks of laziness.
2: Stick to the facts. Lies never did the trick.
3: on second thoughts, just give up, you've not got the nack and you never
will...

Considering the Atari 8-bits can do 9 paletted colors (or 5 paletted via
sprites, plus 16 shades) per scanline, you must be confusing it with
Atari Pong. ;)

I admit, I've been jealous of the C=64 for the sheer number of games
that kept coming out long after the 16-bits showed up, but honestly,
if I were to 'upgrade' from my 800XL and 1200XL, it'd be an Amiga of
some sort. I could never stand the C=64 BASIC & OS... so clunky.
(Being an Atari guy made the switch to Unix/Linux easy ;))

There were times when trolls bothered and at least tried to get their facts straight (well, except for Sinclap, that is) when starting a flame war.

But this one is way too late, as all thes obsolete computers are dirt cheap nowadays and can easily be tested on emulators as well as Youtube videos.

The C64 has a very good sprite engine for it's time (best of the three),

and good sound (also presumably the best of the three).

The A8 had less freely distributable colours (usually just 4 per line except for mode 10 with only 80 pixels horizontal resolution and 9 colours and mode 12/13 - multi-colour text modes with the inverted bit generating a fifth colour - mode 9 and 11 each have 16 colours), but can change graphics modes, colour and player/missile registers between lines (a capability inherited from the VCS, but relegated to ANTIC) and has great scrolling and overscan capabilities. The sound isn't too bad also, but good results apparently require more CPU cycles than than the C64 needs to achive good sound with the SID. It also has a significantly faster CPU, which helps a lot in games like Rescue on Fractalus.

Depending on the programmers' talents and game type, either one may have the better version of a game, but the C64 has the much larger library due to it's greater success.

The Sinclair has no sprites, bad sound, only two colours on any 8x8 pixel grid, yet it is astounding what programmers achieved on such humble hardware (the Speccy version of Starglider e.g. looks incredibly fast for an 8-bit computer). One should also not forget that the Speccy was created as a no-frills, entry-level computer for a bargain price, while the A8 were very expensive when first published in 1979 and the C64 had the advantage of vertical integration with MOS - resulting in the better price/performance ratio.

Thorsten

A scroller of the speccy (e.g. from 'digital brains' software) is
scrolling as smooth as a scroller of the amiga (e.g. from any intro),
when using emulators on PC.
I have that another way within my recollection ;-)

Emulators.... tsk

Big sprites

and (also presumably) no shift-s!

I was impressed by the XL and the C64 at that time, too.

With an one year timeout from my 'm.i.a.' Atari VCS, it became a Speccy
48K plus 8 Cassettes ~1983. Always like/d its high-res...

Spellbound, Jet-Pac, Dragons Bane and many more... Manic Miner, Knight
Lore, Cascade Cassette 50 etc.

The atmosphere in many games is unique to me. Sound-FX are ok and
differentiable.

I don't understand why people still fall for troll posts like this one when
they could be out there learning how to create denial of service attacks
andreally screwing up the internet.

Surely troll posts are distributed denial of service attacks in a broad
sense - the more people feed the troll, the more crap piles up in
people's spools thus slowing down the process of reading Usenet.
   also grin

Well I suppose if we all changed the sub line and made it clear then people
would not actually bother to read stuff which is both off topic and rubbish.
 I would advise anyone reading via a web interface to get themselves a news
reader, Even Microsofts clients are better then web interfaces. One can
just move down a line and look at what interests them and the rubbish simply
does not matter if its here or not.

I like the ZX, because it took little space in my bin and left plenty for
the STfm that followed it.

This Guy (Lloyd Hearsewave) Apparently has nothing better to do while
he sits in his parents basement and dreams about the day that he wont
be a 35 year old virgin anymore.

I suggest that we all report his post as "Abuse" and get the post
removed. In my opinion, It's abusive to enter a discussion area about
a specific things, just to bash them and the people that use them.

Sal (kjmann)

I would agree that the Timex-Sinclair 1000 (the slightly modified
ZX-81 sold in the US) was the only entirely closet-compatible computer
I ever owned.

So atarians and commodes have flamewars too eh?
Seem to be a thoroughly disagreeable lot, the commode users.
Speccy users have never had any beef with the atari users.
:)

Yeah, like Rescue on Fractalus, Star Raiders, Bounty Bob Strikes Back (ok,
C64 version was okay, but I think the Atari one is better) and Ballblazer
... And M.U.L.E. (4 port Atari 800 rules) ... And Dropzone ... Oh, hell,
most of my favourite games are superior on the Atari. I do have C64, C128,
Vic20, +4, C16, but they are not the same to me.

One thing that is better on the C64 is George Feil's Synth Sample 3 (the
spacey tune) ... That's brilliant, but strangely enough, I don't play many
games on the C64

For me, it's Atari, always (old Atari, not the crappy company they are now)

You call this a flamewar? Pah!

> Seem to be a thoroughly disagreeable lot, the commode users.

Actually, I quite like the Commode. It had a good version of
Ghostbusters - well, the theme music was cool. In fact, I might just
go fire up one of the C64s now...

hang on...

Damn. It's not working - it looks like the power supply failed.
Wait, I'll find another PSU. ...

Nope. I think that one fried too. I'm sure I've got another one...

Damn. That one seems to be fried.

Oh well. Back the the +2.

Hmmm, bad choice... Not that the commodoe didn't have any good conversions, but Ghostbusters is better with the XL Version by miles. Even the sound is, in that case, more atmospheric (funky). M.U.L.E. is an other game (also with better sound) and many more games.
Four channels is definetely more than three ;-)

Spending CPU time for sound can deliver fantastic effects (e.g. Hall), not to forget the vacuum-cleaner like out of phase (standard) sound.

Nice computer! Expensive though...

> Oh well. Back the the +2.

Have fun!

Xref: g2news2.google.com comp.sys.atari.8bit:2612

Hi everyone ...

As you may know, I have been doing some work with 18 new characterflip
display modes that I came up with, based on Bill Kendrick's Super
IRG. One thing I am wanting to do, is to convert GIF and other PC
graphics formats to some of these new modes. For right now, I am
concentrating on trying to come up with some way to display GIFs using
Super IRG 2 and Super CIN, as these seem to be the best of the 18 new
modes.

Super CIN looks to be the easiest of the two. It's basically the text
equivalent of the CIN bitmap (160x192x64 color) mode. This is an
ANTIC 4 based mode, which flips the GTIA between normal and Graphics

11 every VBLANK, flips COLBK between 0 and 4, and also flips the display list between ANTIC 4 and ANTIC 2, so that the ANTIC 2 shows everytime the screen is in Graphics 11. The result is, characters that can display any of 64 colors at 4x8 resolution, and a total 80 colors displayable.

What we would need is a means to come up with a monochrome 160x192 Gif file at 5 shades, and maybe use G2F to convert it, and save a character set. The other half of this display is a Graphics 11 bitmap derived from a color version of the same GIF file. I have a means of converting this picture into character fonts from BASIC.

The idea is, I will be setting up a display list interrupt every 3 lines (4 lines if using narrow playfield) with each DLI change pointing to the next character set. These get flipped every VBLANK along with the GTIA, COLBK, and display list. You can get 15 character rows of display on normal playfield, and 20 rows if you use narrow playfield.

I believe that I can do a decent GIF display in Super CIN ... thanks to Graph2Font.

The tricky mode, however, is Super IRG 2. This is like Bill Kendrick's Super IRG, except for playfield registers 708-711 getting flipped every VBLANK, allowing 23 colors (16 per character cell) at ANTIC 4 resolution. This should theoretically allow you (using the DLI method above) display 12 character rows of a GIF in normal screen and 16 in narrow playfield. Decreasing your color resolution by flipping fewer regsiters (or maybe not using the ANTIC 4 5th color and sticking with 16 colors) will allow for more rows.

My questions is this: Is there an algorithm by which a GIF file can be converted down to 160x192x23 colors, with those 23 colors being composites of the 4 atari playfield registers (708 through 711). Keeping in mind, there are 16 colors in ATASCII 0-127 in Super IRG 2, while in inverse characters (ATASCII 128-255), colors 17-23 will replace colors 10-16 (these are all composites of PF2 for normal and PF3 for inverse). So there is the added provision that colors 10-16 cannot occupy the same 4x8 character grid as colors 17-23.

I did some calculating, and believe that there is a palette of 8,256 colors you can choose from in Super IRG and Super IRG 2. This is based on 128+127+126+ ..... +2+1. So each one of these colors will have two composites from the 128 colors in the non-GTIA Atari palette.

A lot of my polish Atari friends are excited by Super IRG 2 and were looking to prepare some pics for display in this mode, and some of my other ones ... but it is an interesting puzzle, trying to come up with composite Atari colors to make up these 23 from any GIF. So, the question is: Any enterprising programmers want to give this a go? :)

Sorry if any of this goes over anybody's heads. I really think this is virgin territory as far as Atari 8-bit graphics are concerned.

Shame I don't live closer, or I'd pop by and give a lecture on the
joys of Super IRG, the new CIN text modes, and other interesting
things :)

I don't know much about the history of C=64, so I didn't know that.
Thanks for sharing! :) (That reminds me, I have a book on the 64
on my Amazon wishlist that I should finally just go ahead and purchase.)

My brother had the C=64 (and lots of games). I had the Atari (and few
games, but a powerful BASIC to keep me busy writing my own ;))

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family
of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE,
130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by
Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of

Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from 1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, the Atari computer intellectual property rights, along with the home market rights to the Atari trademark itself, are owned by Atari Interactive, Inc., a subsidiary of Atari, SA of Lyon, France.

I don't know what you're trying...? You want your xf551 to be in
double density at startup.
I wrote a program to set the density. It has been a long time, so it
may only be for the US Doubler 1050.
Usually, a double density capable drive detects the density when you
insert a disk, you're saying the
Woolley upgrade doesn't read a double density disk? What kind of
upgrade would that be?

The Wooley upgade only added the ability to use 80 tracks and maybe
spinup delay. Not sure but it may have changed a few other things like
step rate.

Problem is the XF ROM had some bugs in software and the only fix there
may be is the Puff ROM.

If you insert a disk in a 1050 you notice the drive always spins up
for a few secs. What goes on is Tandon, the actual desigers of the
1050, knew the drives would have to use both single and double density
disks so they have the 1050 fireware keep an eye on the door latch and
check density every time it is cycled. The XF being an Atari design
was not nearly as robust.

I'm not sure of all the bugs in the XF but you can read the Puff
blurbs about his improved ROM to get an idea. FWIW: I directly asked
Puff about bugs he said he discovered in the XF and SD on CIS and he
would not respond. At the time he was promoting his own business and
as such did not provide assistance to any of his competition.

As Jack notes switching disks has problems. I think you get a read
error on your first command like reading a directory and it only works
if your sofware/DOS is setup to retry. There's a few other odd bugs in
there like ~writing a sector w/o turning the motor on or some such.

Rick

I can't guarantee what'll run on what. These days I've got some
Centrino thingy with 2GB of RAM that I got from Dell (Ubuntu pre-installed).

It should certainly be easy enough to figure out what version fo
Linux is still around that'll run on a Pentium with 24MB of RAM.
(1GB is plenty of disk.)

Assuming this is for SIO2PC and other tinkering, you could even run it
without a GUI, or even headless. (SSH into it remotely from a more
modern system, and run all your commands remotely on the box.)

If SIO2PC kinda stuff is what you're after, you'll want to make sure
that the serial port'll work well, and that you can build something
like Matthias Reichl's "AtariSIO" for it. (i.e., compatible version
of the Linux kernel)

These days, I'm fully SIO2SD, so I'm kind of checked-out when it
comes to this kind of nonsense. ;)

------------------------------

Subject: Introduction

Conventions
-----------
All commercial vendors, developers, publishers, and repair shops should be
listed here.  "Active" PD/freeware/shareware developers should also be listed.
Persons or entities holding rights to products, but not selling or supporting
them in any way, should NOT be listed here.

"Vendor" = Reseller of products produced by others.  Types of products
sold are given in categories: new hardware, used hardware, PD/freeware/
shareware, (new) commercial software, used (commercial) software.

"Developer" = Producer of products.  Titles of products produced by the
developer are listed.  No prices are given.
```

"Publisher" = Publishes a print or disk magazine, or a book. Complete subscription or ordering information should be given, including prices. Authorized online publishers of originally print or disk magazines are also listed. Online books are not listed.

"Repair Shop" = Can repair 8-bit Atari or related hardware devices. Be sure to make advance contact before sending anything to work on!

Entries are presented alphabetically by company name, or publication title. If no company name exists, a personal name is used. "See" references indicate complete information may be found under the given heading. "See also" references indicate closely-related information may be found under the given heading.

The month/year that vendor information was most recently fully verified is given at the "upper-right" of each entry.

Every entry should contain a valid postal address or web page address.

Entries do not include an email address due to the overwhelming amount of spam that would result.

Internation Reply Coupons

The following is from: (2010.09.12)
http://www.upu.int/en/activities/international-reply-coupons/about-irc.html

About International Reply Coupons
When one writes to a stranger and requests a reply, it is considered polite to enclose a self-addressed stamped envelope. This works well when both persons live in the same country; however, if they are from different countries, the enclosed postage stamp will not be valid.

All member countries
This technical problem was solved in 1906 when the Universal Postal Union, during its Congress in Rome, introduced the International Reply Coupon service. As the service began before the days of airmail, the earliest coupons could only be redeemed for a single-rate ordinary postage stamp to a foreign country. In terms of today's UPU Convention, International reply coupons (IRC) are exchangeable in all member countries for the minimum postage of a priority item or an unregistered airmail letter sent to a foreign country.

Mandatory to exchange
The UPU's International Bureau processes several million coupons each year and deals with of all accounting aspects. The International Bureau does not sell IRCs directly to customers; they must buy them from their local post office. Although Posts are not obliged to sell IRCs, it is mandatory for Posts to exchange the coupons. If a Post does not sell IRCs, it is possible to purchase them in a post office located in a neighbouring country.

DISCLAIMER

Appearance in this list does not constitute a recommendation or endorsement of the business, individual, product, or service listed.

Verfications -> YOU!

This list is in a constant state of development, and comes with no guarantees. Information of this nature constantly ages; therefore, the information contained in this list is constantly updated. Please use the latest release of this list whenever possible!

Remember, the success of this list is dependent on YOU, the reader, to send me updates that correct errors that you find. If you use this list, please do your part in keeping it useful for everyone!

Wow, very nice! :) (Only tried it on an emu w/o a real joystick, so I look
forward to trying it out on my 800XL.)

I'm being "inconvenienced" by my cellphone Atari emulation so I
thought I would take a shot here. Samsung Code with built in keyboard
& I can't get it to enter numeric data no matter what key combinations
I press. i.e. normal method is <Fn>E to get number 1 but emulator
stays in character mode. I can just rotate disks from the emulator but
I would rather be able to type stuff like D3: or FILE.001

Rick

Alright folks,

Well, I always thought that I had a face for radio, and now I'm going
to see if I have a voice for radio too. Fledging Cheshire radio
station for Crewe and Nantwich, The Cat, will tonight have a 'special'
guest to talk about the 8-bit indy development scene and other 8-bit
related stuffs. You can listen online by clicking http://www.thisisthecat.com/
from 21:00 onwards. You may also send some questions in regarding indy
developments and/or 8-bits as long as they are not too taxing to
studio<SPAM>@thisisthecat.com (you knows which bit to remove). Please
avoid the "which is better, the Speccy or the C64?" sort of questions
as we all know the answer to that one.

A note for younger people, words like "C*mm*d*re", "C64" and other
mild swear words will be used during this broadcast, so if you don't
want your mind currupted, then don't listen. You have been warned!

Regards,

Shaun.

Just stumbled across this via YouTube:

  http://little-scale.blogspot.com/2008/01/nested-for-statements.html
  http://little-scale.blogspot.com/2008/01/soft-midi-pokey.html

Basically, someone hooked up an Atari POKEY chip and can use it
as a MIDI device to play music.

I can point that the last paragraph was in *X-POST* between the two
comp.sys.* ? as usual....

Personally, every 8-bit machine has his strongness and weaknesses, and I
guess that it's time for starting the talks for the peace treaty closing
this thirty year flamewar :)

Best regards from Italy,
dott. Piergiorgio.

Nice attempt to flame-bait....

No attempts at anything really. As I said on the show, I like the
Commodore VIC-20 and PET a lot. In any case, some Commodore people
need to get a sense of humour.

Regards,

Shaun.

And indeed also Sinclair people....

At least we agree :)

Side note, in French and German the words PET and Vic respectively
actually sounds like local mild unrefined word.... ;)

Best regards from Italy,
dott. Piergiorgio.

Which is why they didn't call it the Vic in germany, iirc?
They called it the VC 20.

Not nearly as much as [some of] the Immortal Grandmasters of the C64,
I can assure you.

> At least we agree :)

If you say so.

> Side note, in French and German the words PET and Vic respectively
> actually sounds like local mild unrefined word.... ;)

As well as pointing out that I'm not a C64 expert or specialist or
whatever, I also dropped the bombshell within the broadcast that I
prefer the Commodore PET and VIC-20 over the C64 mostly.

> Best regards from Italy,
> dott. Piergiorgio.

Take care,

Shaun.

Well, also I prefer the PET to the Vic and 64, mainly because these was
more "balanced" engines re. Vic and 64.

OTOH, in the sinclair branch, I prefer the Speccy to the ZX81-80.

Best regards from Italy,
dott. Piergiorgio.

yes, AFAICT.

Also VC gives an certain marketing vantage, with the parallel with the
VW (the "beetle")

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from 1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, the Atari computer intellectual property rights, along with the home market rights to the Atari trademark itself, are owned by Atari Interactive, Inc., a subsidiary of Atari, SA of Lyon, France.

NEWSGROUP BACKGROUND

comp.sys.atari.8bit was created in November 1986 (as part of the Great Renaming) as a direct replacement for: net.micro.atari8

comp.sys.atari.8bit is unmoderated, and has no formal newsgroup charter.

The comp.* hierarchy of Usenet newsgroups is managed by the Big-8 Management Board: http://www.big-8.org/

RELATED USENET NEWSGROUPS

alt.binaries.comp.atari8bit

Kind of good news for me but it was a rough journey. I decided to use
one of the laptops I am resurecting to do some disk rescue of 3.5"
disks that hadn't seen fresh air for 15 years. Nicest package,
relative term, is a Toshiba 4020CDT. It has a 300 mHz PII with 90 megs
RAM, CDROM, USB, Serial Port, 20g HD, and a 1.44m floppy.

Bad news is I am stuck at W95 as the only copy of WXP I have won't
upgrade it. Bad because USB kind of sucks on that vintage Windows but
good in a way in that you can reboot W95 in DOS mode and everything
DOS seems to work.

ANADISK and DEANA aren't exactly as I remembered. Looks like the combo
was mostly to recover single density disks. That is ANADISK will copy
a paper plate but DEANA seems to balk at anything other then single
density XOR flipped bits.

Another thing that sucks about W95 is it came with IE 2.0 which makes
most of the web unreadable. Tried upgrading to Firefox and it belched
bad during setup. No love from Opera either. On the bright side
umich.archive is so old IE 2.0 has no problems with it! I wasn't
planning on sticking with W95 so I didn't patch the PCMIA to work so I

am using an age old US Robotics 56k Fax/Modem hanging off the laptops serial port. So I D/Ls Sparta Read, ANADISK, XF2.5, et cetera. I found PKUNZIP on an old C User Group CDROM, ARCX on umich, PAK on an old game site web page that was still intact.

Turns out most of my 3.5" disks were SD and I got as far as finding out SR won't accept wild cards so I had to move files one by one. Would have been nice to do a full extraction but at least I got "a way."

So I load up SIO2PC 3.17 which I had floating around on one of the 3.5" disks and the MYDOS45D.ATR from XF2.5 zip. I unplug my rust covered modem cable from the PC serial port and plug in my rust covered SIO2PC cable. I'm actually pretty happy with my default Atari setup, a 130XE with LCD composite monitor. BEEP BEEP BEEP silence! Tried it every which way but loose but no love. SIO2PC doesn't like XFD but I found a single density MyDOS ATR image and it worked. I tried creating a 180k disk under SIO2PC and it ended up just over 4 megs! I finally got a good<I think> double density MyDOS disk by booting the single density version, creating a 180k image under SIO2PC, then formating it and writing DOS files. I can't remember exactly but I do recall some problem with compatibilty sector length in the first 3 sectors. Something like they are actually 256 bytes on a real disk but the drive only returns the first 128 bytes which gave emulator writers fits. It's been cured so long that I forgot the cure or when it happened.

More good news if only for me: I found a program I had really been looking hard for w/o any luck. I had done a screen editor that was exactly how I wanted things to work. I found a few short DEMOs I wrote at the time including a utility I wrote that crunched a Micro Illustrator picture down to a single GR12 character set if said picture was not too detailed. I will upload it somewhere just in case anyone actually has an interest. I thought it was a good demo of what an Atari could do with a redefined character set anyway. Not much value beyond that.

I fumbled around with my screen editor and time has not been kind. It is still good, probably better then most of its contemporaries, but too tuned to how I worked at the time. I didn't want a normal FONT editor, I wanted to use BBK Art to draw a picture and convert that into a single character set. Rather then have enough character sets in memory to do a whole screen I reasoned I would rather work with distinct character sets and do DL interrupts as needed. For instance a GR12 screen is something like 24 lines which requires 8 character sets in memory at one time for complex pictures. When you are storing 8k worth of character sets to represent a 7680 byte screen you are playing away from your strengths.

SIO2PC crashed on me a few minutes ago. I still have to revisit the archive me thinks and get a few more modern versions of SIO2PC or APE. Not sure if I want to go all the way to something like Altera for things other then manipulating disk images. Right now it is pretty

sweet other then the bugs and crashes: ~7.5 Watts of Atari being
hooked to 30 Watts of laptop and maybe 40 Watts of Color LCD screen. I
be feeling green!

IMO not a lot of people do it because it isn't cost effective.
Shipping costs are<were> $12-$30 each way. I would try Bruce at
www.myatari.com as he seems to have a good inventory of parts.

IF you give me some symptoms I may be able to guess a cause.

Rick

Wrong on both counts. XF551 stock can NOT detect nor set the correct
density if it's DD. Woolley's eventual ROM can do this. Either 3.5
or 5.25.

You can't have a permanent double density selection after turning on
the drive unless you re-write the XF551 OS code yourself. Woolley
provided a patch that switches densities when the current one fails to
provide a good read which is pretty close to good enough for most
folks. Maybe you didn't look long enough to find the final version of
the PD XF551 upgrade?
http://groups.google.com/group/comp.sys.atari.8bit/browse_thread/thread/de97fb67e68d8e3d

It works here for my 5.25 XF551.

More like an op ed then useful info: Yes it does update but the usenet is kind of collasping. IIRC some major players like AT&T have now dropped support. Not that it will ever completely fail but the number of ISPs providing usenet feeds is in general getting smaller. There are/were places like Supernews that smaller ISPs contracted with to provide a feed for newsgroups but as the limitations like no binaries or pictures make it difficult with the way most people like to work they migrate to web based forems. Slip and shell accounts are getting rare too.

I can't remember the last time something in UUENCODE was posted to the newsgroup or sent via email. Everybody just provides a web link now.

Rick

Odd just about describes it well. Having got rid of live mail as it was as fast as a slug on superglue, I then found some groups were vanishing their messages, then coming back then going in Outlook express. However I think

I've weeded out the registry mess the uninstaller made now.
 Fingers crossed.
 Brian

I should post stuff on a website that's UUencoded, and force people
to UUdecode it to see it. Maybe I'll call it "getoffmylawn.net"

LOL! It has been a while since you entered the Atari scene hasn't it?
Kind of funny when you think about. In the last 20+ years you've gone
from new kid on the block to an old timer with your own Atari tadpole.

That's kind of like asking what stone knives had to do with the strone
age.

I'm not sure if you are around many young people but they have evolved/
progressed beyond the (usenet, email, web forums). It's now about
social networking sites and text messages. Support & participantion in
the older formats is going the way of the Pony Express. They even text
you from their computers rather then email.

Rick

?Are floppy drives worth using anymore? It's getting harder and harder to
find new blank disks these days. Do they still make them?

I suggest backing up any remaining disks you have (burn the images to
DVD-ROM).

Would it be possible to use SDHC cards as a replacement for floppy disks?
Does anyone make an SDHC card reader that will work with the 8-bit Atari's?

> Does anyone make an SDHC card reader that will work with the 8-bit Atari's?

Jakub is already working on it. The current SIO2SD firmware (2.5) supports
standard MMC and SD cards (up to 2GB), the upcoming 3.0 firmware version
should also support SDHC.

http://sio2sd-dev.gucio.pl/wiki/Features_en

Another alternative is the "SDrive", it supports standard SD cards in
FAT-16 format only, doesn't have a LCD and is therefore a lot
cheaper to build (I paid approx. 15 EUR for the parts) - but also has
fewer features than the SIO2SD.

http://raster.infos.cz/atari/hw/sdrive/sdriveen.htm

I have both devices here and like both of them.

so long,

Hias

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from 1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, the Atari computer intellectual property rights, along with the home market rights to the Atari trademark itself, are owned by Atari Interactive, Inc., a subsidiary of Atari, SA of Lyon, France.

Just an opinion but... it would probably have to cost more then twice
that. I'm not really familiar with the VCS but I think the only
sophisticated chip was the television interface adapter and it was
nothing to write home about. I think it would end up needing a ~huge
expensive FPGA to combine all the functions.

There are systems out there that have similar sophistication to an
8bit but they were all designed from the ground up as a system on a
chip(SOC) and typically use something like an ARM processor at the
core. Everything from MP3 players to cell phones are going that route.
Sunplus and Rockchip were big for a while, I don't know their current
status. They were user programmable with some difficulty.

Not that anyone ever learns: The field is littered with failure of one
type or another. I still have a couple of Cybiko handhelds ~processing
power about equal to an ST that originally sold for $100. The Dingo
which emulates everything short of an X-box, sells for about $100, has
had its parent company tank and reform a couple of times.

It almost prompts me to say: If there is a successful system like you
describe it will be as a bonus in a cellphone. Heck, cellphones are
considered obsolete 6 months after they come out so evev that would be
a flash in the pan. The emulater I use on my Windows Mobile phone
sucks on its keyboard reads but my son's Android seems to work well. I
think both of our phones are based on ~200 mhz arm.

So my son's 4th birthday is around the corner,
and my wife suggested setting up a variety of
video games.

I figured I'd set up the Atari 800 I got recently,
along with the Atari Flashback, the 7800, and the
Wii & PS2. (I have lots of monitors & TVs hiding
in the garage these days :))

Part of house cleaning involved get the damned
tank of a computer and all its bits off the
dining room bookshelf. I decided to take a stab
at 'fixing' the door switch.

Rather than figure out how to solder on short notice --
my poor soldering iron is still New In Box <8^[--
I decided to take a small scrap of uninsulated wired
and literally _TIE_ the springy switch into the 'on'
position.

It seemed to work! And, with a snip, it can be
undone (and a real fix can be made). Of course,
if I'm _unlucky_, the wire will snap on its own and
fly around loose on the motherboard and short circuit
something bad. :^/ But I'll be optomistic. :)

Just wanted to post a follow-up to my original Q from
a couple of months back :)

Fishing line would serve the same purpose. With the added bonus that if
it did break, it wouldn't short anything out.

Do you really need more than 2 GB to backup your floppies??

Usenet is dying largely because all the big ISPs have dropped it due to
illegal uses of it hogging all their bandwidth.

I think most of us that are left that actually use it for legal purposes
are using free services that don't provide any binaries groups.

I just recently got an Android phone and the first two things I
downloaded were Droid2600 and Droid800. Like on the PC, I had to provide
my own ROMs, but they both appear to work. I haven't quite figured out
how to do anything productive with them yet, due to the touchscreen
interface, however. :)

If past experience is anything to go by, these are probably NOAC

(Nintendo-On-A-Chip) devices - basically, a 2600 running in emulation on
single-chip NES hardware.

Who is the manufacturer on these? I'd like to look them up.

> Could something like this be done for the 8-bit Atari computers, cheap

Probably, but I really doubt there would be enough interest to make
producing them viable. Throw a few different computers or consoles from
the era into the mix on a single box, though, and it may be a different
story.

When I was a kid in the early 80s, I always thought it would be great to
have a 6502-based computer with a switch to go between an Atari and a
Commodore. (Not that different from the computer that Apple ended up
making a few years later that switched between PPC and Intel, if I
remember right.)

Probably, but I really doubt there would be enough interest to make
producing them viable. Throw a few different computers or consoles from
the era into the mix on a single box, though, and it may be a different
story.

The new (second generation) Apple TV is supposedly getting an app store
soon. It currently costs $100 and I believe it will probably drop to less
than $50 in a few years. The Apple TV would be a great platform for
emulating old 8-bit and 16-bit computers. It has HDMI, USB and Blue Tooth so
that should take care of any peripherals you might want.

The only problem I see is that Apple doesn't like to approve apps that have
any kind of scripting capability.

I found it - It's the "Atari Flashback 2" and it's actually made by Atari
(or at least the company that is currently calling itself Atari).

Do you really need more than 2 GB to backup your floppies??

- Trevor

I don't think you can find 2GB SD cards anymore. If they're not gone yet,
they soon will be.

No, not yet :-)

But, besides possible availability problems in the near future,
SDHC support is a nice-to-have. For example you could plug the
SDHC card from your mobile/smartphone or your net/notebook
into your SIO2SD.

so long,

Hias

Thanks for that followup. I'm glad you got it fixed. Some had
suggested a piece of plastic, without opening the 800 up. Maybe
a piece of rubber eraser?

Wow! Those must've come out recently, because I occasionally
search the Android Marketplace for "Atari". :)

I just gave them the once-over. Look promising! (Droid800 is hella slow,
even at 75% framedrop.)

That's not a Nintendo on a Chip, that's an actual Atari 2600 under
the hood. The FB2 can be hacked to add a cartridge port, so you can
play original 2600 carts on it (not just the built-in games).

The original FlashBack, as well as "Atari 2600 games on a stick"
and "Atari 2600 games in a paddle", were all not 'real' Ataris,
like the FB2. They were probably Nintendo on a Chip.

One thing I noticed in particular (with the 2600-in-a-stick) was
the colors weren't right, and in Adventure, the square 'player'
sprite did not 'bounce off the walls' the way it did in the real VCS
game. :)

Unfortunately, it appears to have been made only for games - and only
those that use a joystick. There appear to be mappings available only
for joystick functionality, Start, Option, Select, Reset, and a total of
4 regular keyboard keys (the defaults are Q, W, E, and R).

Yep! If memory serves, both the Flashback and Flashback 2 were designed
by Curt Vendel at Legacy Engineering Group (http://www.legacyengineer.com/).

I have the original Flashback, and seem to recall that it is indeed a
NOAC-based device. The games play well, but anyone who spent time with
them when they were current would know that they're ports and not the
originals. The differences aren't huge, but they are noticeable.

Curt also recently helped them with the Flashback 2+ (which may in fact
be what was spotted at the store):

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from 1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, the Atari computer intellectual property rights, along with the home market rights to the Atari trademark itself, are owned by Atari Interactive, Inc., a subsidiary of Atari, SA of Lyon, France.

If someone has the time, could you please download the ATR I attached
at
http://www.ataricorpse.com/index.php?topic=233.0

I just want to make sure it 1) Boots properly because of the
previously mentioned boot sector problem. 2) Run the program
'SHOWUNI.BAS' and see if it displays properly on an XL of something
other then Xformer 2.5? It will want to run with the ATR as drive 1.
IF for some reason you fool around with playfield editor remember
there is a bug in file I/O where something like failing to give it a
file name will corrupt DOS. I can't remember the exact nature of the
bug but I seem to recall the program would let you continue working
but when you finally tried to save your work the program would lock
up.

BTW: I mentioned on the web site too but thought I should mention it
here. I disabled registration on the web site because the spam bots
were out running real people at least 20 to 1. Not that I wouldn't

like a forem but here is good'nuff.

Rick

Hi, Rick.
I couldn't find any ATR to download at that URL. As you say,
registration is disabled.

Thanks for trying Russ. I'm not sure exactly how I set up the board
but my intention was to leave it open for reading and downloading so I
must of set something wrong. The file shows up on my old w95 notebook
off the message body in the lower left hand corner of the sceen as
'Mdos45D.ATR 180k' when I am logged in. I'll give it another shot
while logged off and see what happens.

You were of course right. I logged out of my account and the
attachment disappeared. Now I have to log into the wayback machine and
see if any of the stuff is accessable. I went ahead and enabled
immediate registration but I probabably left some other hurdle in the
way. I don't like what the net has become. Weakens us when we have to
spend a couple of hours a day killing spam bots rather then doing
something productive.

More bright side in an otherwise dismal post: I think I may have found
a brute force scroller I did in Acrion.

Rick

I successfully registered and downloaded mydos45d.atr and tried it.
It won't boot and I can't get a directory of it.

I fooled around and near as I can tell it is that problem with the
double density sectors 1-3 are only supposed to return 128 bytes on a
read but the emulators didn't get the positions in the virtual disks
right. Something like they only used the first 384 bytes for the first
3 sectors instead of 3[128, skip 128]. I downloaded XFormer 2000 and
it chokes on those ATRs too. XF25 works but nothing else does.

Thanks again for all the help. Closing in on midnight here so I think
I am going to crash. I'll switch fill a properly made ATR with the
files and get it up by monday night.<I hope>

Lots of work for such a simple little program but I got it cornered. I
may have recovered the file that made the character set for the
picture too but I haven't quite got things set up for my 130XE I was
going to use for testing. Low on free desk space until I make a
recycle run of old VGA monitors and some slow desktops.

Drifting just a bit in an otherwise dead thread.
https://www.eglobalwireless.com/p-4333-new-7-mini-netbook-laptop-notebook-wifi-windows-black.aspx

I'm not buying one but kind of interesting. My cellphone has Windows, a keyboard, and can make phone calls.<sic> Of course I paid almost 3x as much for my cell phone. It's a close miss though. I wish they would give the version number of CE they are using and blue tooth would be nice. Only 128 megs of DRAM on anything MicroSloth is scary and they don't give the limits of the SD reader: Many of them based on the ARM only handle 2 or 4 gigs.

Punch line for me is IMO the ARM processor carries on much of the tradition of the 6502 design goals. I imagine this thing could run some flavor of an 8 bit emulator but would still need some serious polish to compete with real iron. I kind of wish these things would get some momentum behind them as I would much rather fool with one of these over a Playstation or Xbox.

Hello!

Seems like the World
has been 8bits partitioned,
and each partition contains
only 1 to 20 persons.

The Internet connections
are interfered and the
alien authorities (fallen from the sky)
are appearing as artificial inteligent softwares,
that confuse Robocop with Robocod.

:)

Greetings,
The BITS Club

              Welcome to the comp.sys.atari.8bit newsgroup!

                  Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from 1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, the Atari computer intellectual property rights, along with the home market rights to the Atari trademark itself, are owned by Atari Interactive, Inc., a subsidiary of Atari, SA of Lyon, France.

NEWSGROUP BACKGROUND
comp.sys.atari.8bit was created in November 1986 (as part of the Great Renaming) as a direct replacement for: net.micro.atari8

comp.sys.atari.8bit is unmoderated, and has no formal newsgroup charter.

The comp.* hierarchy of Usenet newsgroups is managed by the Big-8 Management Board: http://www.big-8.org/

RELATED USENET NEWSGROUPS
  alt.binaries.comp.atari8bit
    Programs for Atari's 6502-based orphans.

  comp.sys.atari.advocacy
    Attacking and defending Atari computers.

  comp.sys.atari.announce
    Atari related hard/software announcements. (Moderated)
    Moderator: Kevin Savetz
    comp.sys.atari.announce web page: http://www.atariarchives.org/csaa/

  comp.sys.atari.programmer
    Programming on the Atari computer.

"Atari User" magazine issue 4 has an article by a fellow
named Bobby Clark who took my "Super IRG" mode idea
(basically using VBI to flicker between two charsets in
GRAPHICS 12 mode, to get a perceived extra set of colors)
and ran with it.

I was checking out Atari User, and discovered there's
a conversion/clone of "Dr. Mario" (from the original
Nintendo Entertainment System & Gameboy) that's come out
for the 8-bit! (It has nothing to do with Super IRG or
Bobby's stuff; just happened to be in the same issue.
Though really, that kind of game would benefit from extra
colors ;^))

Anyway, I was always a fan of that kind of puzzle game,
and had even looked into trying to make my own (I think I
was looking at TurboBASIC XL, and it was just too slow to
do the game board logic), so I'm pleased. Though really,
this is asking for trouble... should've named it
"Dr. Atario" or something. :)

Video on YouTube: http://www.youtube.com/watch?v=HcdjLvxYg6A

I'm not actually sure of the official place to get it,
and am not sure I'm supposed to be sharing the Atari User URL,
since it seems to be a subscription magazine. Ah, but I
found it here:

http://www.atarimania.com/game-atari-400-800-xl-xe-dr-mario_25690.html

Hah, I hadn't noticed.

A few things:

(1) Down at the bottoms of pages, right below where it says "Page {X}" in big
letters,
    the links to the other pages don't seem ot do anything. (I have to go use the
    tiny links up at the top left in the upper frame.)

(2) Ugh, frames! ;)

(3) Ultima on carts? Where've I been? Are the carts acting as disks
    (a la Steve Tucker's "MaxFlash"?)

Try The Page Now Bill. I just Fixed the Problem With the Links on the
Pages.

The Ultima Carts are not using a standard Steve Tucker type setup.

So Dr. Mario for Atari 8-bit was okay, but:

(1) music was kind of hard to listen to

(2) full-drop on Down was annoying; should slide, instead

(3) in two-player mode, the other player's game would freeze for a
    moment when you make a match

So E for Effort, but since I own the NES version, I won't really be
booting this up except to demo it as a curiosity. :)

Interesting!

I'm always curious, when I see your products, how the programs were
tweaked compared to the original releases (or prototypes).

For example, you sell Action! carts. Are they original carts, or ones
you made? If you made them, how do they differ? Do they work exactly
like the original? Or are they limited in functionality (like the
disk-based Action! I've seen out in the wild)?

And for some of the games... I seem to recall you(?) saying some of
them were enhanced in certain ways (music, gameplay, whatever). I
could be hallucinating, of course. :)

The Action Carts Are Ones that We Make and They are Fully Functional. Just
like the Original.

-- And for some of the games... I seem to recall you(?) saying some of

Donkey Kong is a good Example of one we Re-Vamped a Bit with New Music.

All The Sound Effects and Music Have Been Redone By Me and Implemented by a Coder on my staff. We also Fixed a Bug in the Code that Caused Mario to get hit by barrels on the Girder above him when jumping. We also setup the intro animation (Donkey Kong Jumping and Bending the Girders) to play at the start of a new game just like the arcade.

Another Good Example is Warhawk. This is a Game that Originally Would not Run on an NTSC System. We had to do some major Re-Coding to fix that one and While we were at it we decided to speed up the control Response so the game would play a bit better (Your Ship can now move around the screen a bit Faster).

Kjmann

Hello everyone,

It is Christmas day and I just wanted to wish everyone
here a Merry Christmas and a Happy New Year. Since 1980
I have been an Atari user and never regretted it. Take
care all....

Merry Christmas to you too, Edward. Its been a great day, kids got a Wii
from Santa and it reminded me of when I got my 800XL, around 1982 I think.

Long live Atari.

Mark

Amen, brother! Atarian since 1982 and I feel exactly the
same way.

Merry Christmas one and all! :)

I was a wee little'un back in the day, but I, too, have
been an Atarian (2600, then soon after 8-bit, and after
college I added Jaguar & Lynx to the line-up) since
1980 or 81 or so.

Or wait, maybe that Pong we had before the 2600 was an
Atari, too. ;)

Nice looking game. The game itself is not my cup of tea though I see
its appeal as a cute Tetris variant with Super Mario styling.

Trying not to sound like a overly-enthused fanboy, but that's a great selection of new carts and a very cool Atariesque website (love the tunes). As well, says the website, that you have a "store" that is open weekends!

It's unlikely I'll get to Oregon soon, but if I get anywhere near, I'd have to check that out! Can you perhaps post some photos of the interior?

Do all your carts have nice labels? Sinistar, Space Dungeon, Star Island?! Man, I had forgotten the early vectrex Star Island stand-up arcade machine, it's definitely cool to see an 8bit cart of it! The Ultima series (you're not the first to offer IV though).

Praise aside, I must say that I think you should include a statement that you're willing to take down any ancient software entry on notification by the author that's its unwelcome. I hope that in the case of Yoomp and ones like that that you're sending a royalty, however infinitesimal, to the authors.

We're talking about CPM.ATR. I found it on Andreas Magenheimer CD he
sent me. It is from Germany.
I'm pretty sure it was Andreas.
I can post it on AtariAge and you can download it. It didn't have any
docs except for a small one about
TurboBASIC.
Let me know you want me to post on AtariAge.
